Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

SEC. 1500 • CAPACITORS
SEC. 1600 • CHEMICALS
SEC. 1800 • COILS/ASSEMBLIES/FORMS

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

eem — Electronic Engineers Master saves you engineering, specifying and purchasing time. Manufacturers' catalogs are grouped under easy-to-remember headings.

The 55 Product Sections categorize related electronics components, equipment, materials, instruments and systems, and fabrication services, enabling you to quickly compare and evaluate similar items.

To find a specific manufacturer's catalog pages refer to the Index of Manufacturers which precedes each Catalog Section (white pages).

UNITED TECHNICAL PUBLICATIONS, INC. • 645 Stewart Ave., Garden City, N.Y. 11530 • (516) 248-9700

INTRODUCTION

This 1971-72 edition of **eem**/**Electronic Engineers Master** is the fourteenth and largest volume published to date. You will find more catalog data included than ever before, systematically presented for the first time in **three separate volumes.**

Volume 1 — Test Instruments, Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

The 55 **eem** Product Sections have been individually assigned to their appropriate volume. A listing of the product sections within each volume appears on each cover. A complete listing of the 55 product sections appears on the first page of each volume (pages 1, 301, 989, 2009 and inside the back cover).

United Technical Publications' Time-Saving Product Information System

We have drawn upon the experience of hundreds of engineers and purchasing agents to develop a time-saving product/information system. It includes these major elements:

eem/Electronic Engineers Master

This bound catalog file for the complete product data of many huundreds of manufacturers is divided into three volumes with a total of 55 product sections. It includes the **Catalog Section** (white section); an industry-wide **Product Directory** (green section); a verified **Directory of Manufacturers** (yellow section) which can put the products and sales offices of more than 6,000 manufacturers at the user's fingertips; and a **Trade Name Directory** which starts on page 957 in the white pages of Volume 1.

Electronic Products Magazine

The electronic industry's only major magazine devoted 100% to products, product application and product selection, EPM keeps engineers and purchasing agents up to date on all phases of products.

Prices

Prices are furnished for information only — they are not offered as quotations. Participating manufacturers reserve the right to change specifications, revise prices or discontinue items without notice. While every precaution has been taken to assure accuracy in content, the publisher cannot be responsible for manufacturers' claims and representations; nor can any guarantee be made against the possibility of error or omission.

Circulation Policy

eem / **Electronic Engineers Master** is distributed annually at no charge to qualified engineers and purchasing agents, affiliated with North American manufacturers, research laboratories and government agencies. To qualify for a subscription you must be actively engaged in application, selection, specification, design or procurement of electronic components, materials, equipment and related fabrication services.

Official subscription form may be obtained by submitting the following on your company's letterhead: (1) name and title, (2) job function and duties, (3) main products manufactured or developed by your company, division or laboratory. Please include building number or mail station with address. Letters must be signed personally. Group qualification is not acceptable. The cost of **eem** to nonqualified personnel is $20.00 per copy.

No portion of this book may be reproduced without express permission of the publishers.

Library of Congress Catalog Card Number 58-9813.

PRODUCT INDEX AND DIRECTORY

This Product Index and Directory contains listings for all products in **eem**. Since **eem** consists of three volumes, if a product is shown in this volume, a complete list of its manufacturers appears below the product heading. If the product appears in one of the other two volumes, a cross reference indicates the appropriate volume.

For products which are included in this volume, manufacturers are listed alphabetically in two groups under each product heading. The first group **(shown in bold face)** includes those manufacturers whose catalog pages appear in the white pages of **eem**. Page numbers are included if information on the specific product shown in the heading is included in the manufacturers' pages. The second group includes those manufacturers who make this product but whose catalog pages do not appear in the white section.

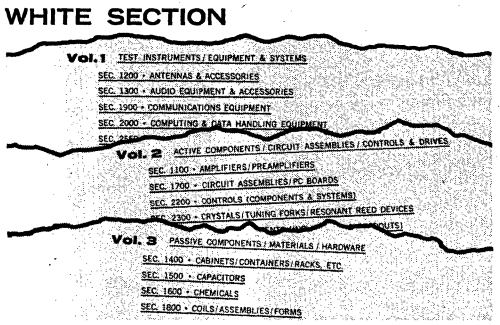
Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

to find manufacturers' catalog information

WHITE SECTION



Vol. 1 TEST INSTRUMENTS / EQUIPMENT & SYSTEMS
SEC. 1200 • ANTENNAS & ACCESSORIES
SEC. 1300 • AUDIO EQUIPMENT & ACCESSORIES
SEC. 1900 • COMMUNICATIONS EQUIPMENT
SEC. 2000 • COMPUTING & DATA HANDLING EQUIPMENT
SEC. 2[illegible]
Vol. 2 ACTIVE COMPONENTS / CIRCUIT ASSEMBLIES / CONTROLS & DRIVES
SEC. 1100 • AMPLIFIERS/PREAMPLIFIERS
SEC. 1700 • CIRCUIT ASSEMBLIES/PC BOARDS
SEC. 2200 • CONTROLS (COMPONENTS & SYSTEMS)
SEC. 2300 • CRYSTALS/TUNING FORKS/RESONANT REED DEVICES
SEC. 2[illegible] [illegible]OUITS]
Vol. 3 PASSIVE COMPONENTS / MATERIALS / HARDWARE
SEC. 1400 • CABINETS/CONTAINERS/RACKS, ETC.
SEC. 1500 • CAPACITORS
SEC. 1600 • CHEMICALS
SEC. 1800 • COILS/ASSEMBLIES/FORMS

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

More than 6,000 manufacturers of electronic components, materials, instruments, assemblies, systems and key services are listed in the Yellow Section. An identical Yellow Section appears in each of the three volumes of **eem,** listing addresses, phone numbers and sales managers' names. TWX numbers are also included where available. **Boldface** listings indicate that detailed information on the manufacturers' products is cataloged in the White Section of **eem. Boldface** listings also indicate that local sales offices or representatives are listed for that manufacturer.

55 PRODUCT SECTIONS IN 3 VOLUMES

TEST INSTRUMENTS EQUIPMENT & SYSTEMS	Vol. 1
ACTIVE COMPONENTS / CIRCUIT ASSEMBLIES / CONTROLS & DRIVES	Vol. 2
PASSIVE COMPONENTS MATERIALS / HARDWARE	Vol. 3

eem — Electronic Engineers Master saves you engineering, specifying and purchasing time. Manufacturers' catalogs are grouped under easy-to-remember headings.

The 55 Product Sections categorize related electronics components, equipment, materials, instruments and systems, and fabrication services, enabling you to quickly compare and evaluate similar items.

To find a specific manufacturer's catalog pages refer to the Index of Manufacturers which precedes each Catalog Section (white pages).

These are the 55 eem Product Sections grouped in 3 volumes

Volume Number	Product Section	Page Number	Products
2	1100	1278	Amplifiers, Audio, Operational, etc.
1	1200	307	Antennas & Accessories
1	1300	308	Audio Equipment & Accessories
3	1400	2314	Cabinets, Chassis, Containers, Racks, Boxes, etc.
3	1500	2330	Capacitors (All Types)
3	1600	2478	Chemicals (Acids, Adhesives, Coatings, Lubricants, etc.)
2	1700	1296	Circuit Assemblies, Circuit Boards & Breadboarding Kits
3	1800	2481	Coils (Inductors, Chokes), Assemblies, Forms
1	1900	322	Communications Equipment (Facsimile, Telephone, Television)
1	2000	328	Computing, Data Handling Equipment & Accessories
3	2100	2510	Connectors, Electrical (Receptacles, Sockets, Terminal Boards)
2	2200	1304	Controls, Control Components & Systems
2	2300	1353	Crystals & Mechanical Tuning Devices; Oscillators
3	2350	2728	Delay Lines (All Types)
2	2400	1435	Panel Components (Including Lighting & Readouts)
3	2500	2754	Fabricated Mechanical Parts (Bearings, Cores, Magnets, etc.)
1	2550	388	Environmental Test Equipment
3	2600	2776	Fans, Blowers & Cooling Equipment
2	2700	1506	Filters
3	2800	2809	Hardware, Non-Current Carrying (Fasteners, Washers, etc.)
1	2900	391	Instruments, Measuring & Test
1	3000	587	Instruments, Graphic Recording
3	3100	2810	Insulators, Insulating Materials & Parts
2	3130	1535	Integrated Circuits & Hybrid Microcircuits
3	3150	2814	Manufacturing, Subcontracting, Custom Fabrication
3	3200	2816	Materials, Raw (Metals, Plastics, Glass, Rubber, Cloth, etc.)
1	3300		Medical Electronic Equipment
1	3400	598	Microwave, Laser & Radar (Systems & Subsystems)
2	3450	1552	Microwave, Laser & Radar (Components/Accessories)
2	3500	1572	Motors, Rotating Components & Accessories
1	3600		Nuclear & Radiation Equipment
2	3700	1636	Photoelectric Equipment & Components
2	3800	1641	Optical Equipment & Accessories
1	4000	616	Power Supplies, Converters, Inverters, Batteries, etc.
1	4100	947	Production Machinery & Automation Equipment
3	4200		Engineering Aids (Books, Drafting Equipment, Whiteprinters)
1	4300	950	Recording Equipment (Non-Audio Types)
2	4500	1645	Relays
3	4600		Research, Development, Engineering Services
3	4700	2818	Resistors, Fixed
3	4750	2902	Resistors, Variable (Potentiometers & Rheostats)
2	4800	1794	Semiconductors & Devices, Rectifiers (Non-Tube Types)
2	4900	1865	Servomechanisms & Components
1	5000	951	Studio Equipment
2	5100	1877	Switches, Circuit Breakers, Fuses, Protective Devices
1	5200	953	Telemetering Equipment
2	5300	1963	Thermal Devices, Thermistors, Thermocouples, Thermostats, etc.
3	5400	2933	Tools (Hand & Power); Soldering Supplies

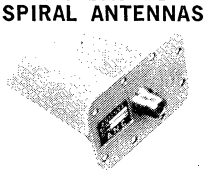
SOLID STATE SWITCH

SLEEVED DIPOLE

CAVITY BACKED SPIRAL ANTENNAS



BLADE ANTENNA

ANTENNA SELECTORS

SPEC.	AS-103	AS-101	AS-121
Input Power	28 VDC MIL-STD 704 Cat. B	28 VDC MIL-STD 704 Cat. B	28 VDC MIL-STD 704 Cat. B
Cycle Sw. Rate	70 ±15 CPM	15 ±1 CPM	70 CPM ±10% or 20 CPM ±10%
Control Signal	100-4000 Hz 50 MV to 1V RMS	±DC or 135 Hz −5 to +5 VDC .5 to 5 VRMS	10 ±1 VDC
RF Relay Output	2 amps max.	2 amps max.	2 amps max.
Weight	3 lbs. max.	3 lbs. max.	1.0 lbs. max. Delayed Keyline output 50 ±5 msec.

SOLID STATE SWITCHES

SPEC	S-102	SL-101	S-109
Frequency	1000-1120 MHz	DC - 1.0 GHz	2700-3000 GHz Also Avail. in Octave Bandwidth to 12 GHz
VSWR (w/r 5Ω)	1.2:1 max.	1.2:1 max.	1.6:1 max.
Invertion Loss	0.5 db max.	0.3 db max.	1 db max. at 2700 GHz
Isolation	30 db min.	40 db min.	
Power Handling	1 Kw peak; 1 w. avg.	Receive	1 Kw peak 1 watt av
Configuration	SP2T Lobing	SPST	
Switching Time	38 ±5 cps	5 ms max.	75 ±3 CPS
Operating Power	115V 400 Hz 300 ma	12 VDC 100 ma	28 VDC 300 ma
Weight	1 lb. max.	1 oz. max.	10 oz. max.
RF Output Phase			0° to 180°

SLEEVED DIPOLES

SPEC	AL-106	AL-168	AX-135	AL-244
Frequency	1.25 to 1.35 GHz	1.0 to 1.1 GHz	9.0-10.0 GHz	1.0 to 1.1 GHz
VSWR (w/r 50Ω)	2.0:1	1.8:1 max.	1.75 max.	1.8:1 max.
Gain	1 db	2 db nom.	2 db nom.	
Polarization	Linear	Linear	Linear	Vertical
Power Handling Capability	100 watts Avg.	3 KW peak 100 w. avg.	100 w. avg.	3 KW peak, 100 w. avg.
Pattern	Omni Azm	Omni Azm	Omni Azm	Omni Directional in azimuth
Mil Spec	MIL-E-5400	MIL-E-5400	MIL-E-5400	MIL-E-5400
Weight	2 oz.	6 oz.	¼ oz.	7 oz.

AMERICAN NUCLEONICS CORPORATION

Typical integrated components include the following product lines.

- **Antennas**
- **Mixers**
- **Stripline Components**
- **Microstrip IC Components**
- **Solid-State Sources**
- **Filters**
- **Phase and Amplitude Comparators**

American Nucleonics Corporation is also noted for its systems experience in the following areas.

AVIONICS SYSTEMS

- **Radar Velocimeter**
- **Flight Control Systems**
- **Ordnance Simulators**
- **Stray Energy Monitoring Devices**

SIGNAL PROCESSING SYSTEMS

- **Interference Cancellation Systems**
- **Jamming Suppression Systems**
- **Radiometric Detection Systems**
- **Antenna Systems**

CAVITY BACKED SPIRAL ANTENNAS

SPEC.	AM-203	MA-104	AM-126	AC-204	AM-227	AK-264
Frequency	8.275 to 8.290 GHz	2.0 to 11.0 GHz	2.0-8.0 GHz	4.5 to 4.750 GHz	2-16 GHz	12 to 18 GHz
VSWR (w/r 50Ω)	1.7:1	2:1 max.	2.25 max.	1.7:1 max.	2:1 max.	2.0:1
Gain (Ref to CP)	7 db min.	0-7 db (3-6 GHz) 7 db (6-11 GHz)	3 db @ 3 GHz (w/r linear)	7 db min.	−3 db @ 2 GHz	−3.0 dbi at 12 GHz −1.0 dbi at 18 GHz (w/r linear)
Beam Tilt	3° nominal	±13° max.	±13° max.	3° nominal	2.5 typ., 4° max.	
Polarization	RHCP	LHCP	RHCP	LHCP	RHCP	RHCP
Axial Ratio	1 db max.	3 db max.	2 db max.	1 db max.	0°-0.4 db typ. 1 db max. 45°-3 db max. 80°-8 db max.	1 db on axis 3 db ±45° 7 db ±90°
3 db Beam Width	50°	60-90° (2-5 GHz) 40-90° (5-11 GHz)	45° min.	50°	77° ±10° (2-4 GHz) 70° ±12° (4-16 GHz)	80° ±10° (phase tracking ±6°, 0°-70° off axis)
Gain Tracking (w/r Linear Polarization)	±0.5 db on axis	±0.5 db on axis	±0.5 db on axis	±0.5 db on axis	±0.5 db on axis	±0.5 db on axis
Weight	3 oz. max.	7.5 oz. max.	3.5 oz. max.	3 oz. max.	8 oz. max.	1.2 oz. max.
Mil Spec	MIL-E-5400 Class 2	MIL-E-5400 Class 2	MIL-E-5400	MIL-E-5400 Class 2	MIL-E-5400 Class 2	MIL-E-5400 Class 2

OSCILLATOR

SPEC	TV-102
Frequency	1750 to 1850
Band	MHz (tunable)
Freq. Stability	±2 MHz
Power Output	1 watt min.
Primary Input	+19 VDC @
Power	600 MA
Weight	8 oz. max.
Modulation	FM-DC — 2 MHz
Deviation	±3 MHz
Linearity	±10%
Sensitivity	1 MHz/Volt

ANTENNA BLADES

SPEC	AM-221	LA-103	AM-231	AU-173	STUB AM-142	HELIX AX-187
Frequency Range	225-1500 MHz	500 to 1000 MHz	500-1800 MHz	225-420 MHz	2.0-10.0 GHz	7.0-11.0 GHz
VSWR (w/r 50Ω)	2.5:1 max.	Less than 2.0:1 when mounted on a 3 ft. sq. plane	2.0:1 reference to 50 ohms	2.0:1 max.	2.0:1 max.	2.0:1 max.
Azimuth Pattern		Omnidirectional				
Polarization	Vertical	Vertical	Vertical	Vertical	Vertical	Circular
Radiation Pattern	That of λ/4 Stub			That of λ/4 Stub	That of λ/4 Stub	Unidirectional
Beamwidth	λ/4 stub			λ/4 stub	λ/4 stub	45° nominal; 10
Power Handling Capability	100 watts Avg.	250 watts CW	250 watts CW	100 watts Avg.	100 watts Avg.	Receive

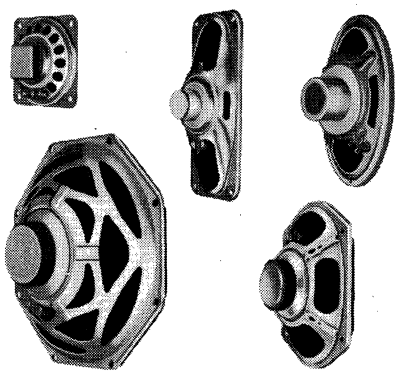
Amperex INDUSTRIAL AND HIGH FIDELITY Speakers

STANDARD SPEAKER SERIES



Amperex standard speakers offer a wide diversity in characteristics, size, and price for all kinds of radio and television sets, phonographs, tape recorders, sound columns, etc.

Most standard speakers have a flat magnet system of powerful Ferroxdure ceramic. For television sets and other applications where the leakage field should be kept as small as possible, there are Amperex loudspeakers with a Ticonal magnet in a pot system. Due to the use of Ticonal 750 these pot systems are very small.

NOTE: ALL STANDARD SPEAKERS AVAILABLE IN 4, 8, 15, AND 25 OHM IMPEDANCES.

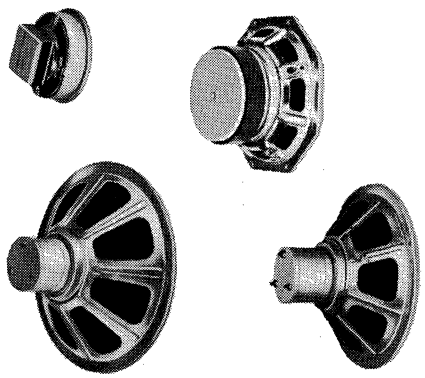
HIGH QUALITY SPEAKER SERIES



The high-quality speakers have been specially designed for use in Hi-Fi equipment, where a high power-handling capacity, a very wide frequency-range and a negligible distortion level are required. Examples of application: acoustic boxes, bass-reflex boxes, juke boxes, Hi-Fi enclosures with or without cross-over network and stereo columns.

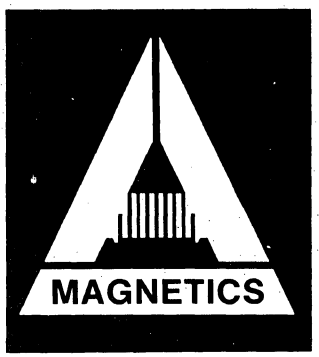
When Your Problem Comes to a Head...Solve it with Arvin®

Where the total capability exists to...

Custom design
Custom engineer
Custom manufacture

Magnetic heads to your specifications



Offering total services to the computer industry in the areas of...

FLYING HEADS

Hong Kong facility offers sophisticated manufacturing skills and significant savings. Arvin Magnetics—Hong Kong was established during 1968 as part of Arvin International, Inc.'s facility in Hong Kong to provide the computer industry with a low cost source of flying heads and assemblies. Employees and facilities in Hong Kong are being continually improved to provide the finest in manufacturing capability. The customer deals only with Arvin Magnetics-Columbus which had developed a sophisticated system of parts movement, importing, air shipping, and communications to assure performance to the customer's schedule. A proven approach of prototype construction in the United States followed by training in Hong Kong by engineers assures tight adherence to performance and fast production start-up.

TAPE HEADS

Double your head life by having your head manufactured as an Arvin "Hard Head." Arvin Magnetics has developed a new head construction that greatly extends head life by a special head construction that has a very low coefficient of friction. Heads constructed in this manner are called Arvin "Hard Heads." If you are a user of precision heads, Arvin Magnetics would like to quote your head manufactured as an Arvin "Hard Head."

Arvin Magnetics concentrates on multi-channel heads for the computer and instrumentation industry. Capability exists to manufacture to your design and/or specifications and to design to your system requirements. Experience with all types of core materials and head construction techniques enables Arvin Magnetics to utilize the best approach to your magnetic head needs.

FERRITE PRODUCTS

Core Material With the Big Future

Arvin Magnetics is dedicated to anticipating trends in the magnetic head area and being ready to serve our customers' future needs. A major part of this policy is the belief, based upon outside market surveys and our knowledge of the field, that ferrites will play a major role as the core material of the future in magnetic heads.

We have a multi-faceted program in the ferrite area that includes:

a. Sources of ferrite—Both internal and external sources are utilized to assure our customers of the widest range of ferrite material.

b. Machining—Trained personnel and slicers and dicers, parallel lapping machines, toroid cutters, etc., enable us to process ferrite for any application.

c. Glass-Bonding—Arvin Magnetics is licensed by North American Philips Company, Incorporated, to do glass-bonding.

Interested in seeing how Arvin Magnetics would solve your head problem? Contact Manager, Arvin Magnetics, to arrange for a presentation on the total capability of Arvin Magnetics and a discussion on how this capability can be applied to your problems.

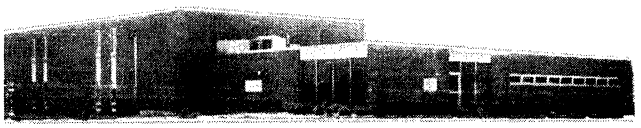
INTERNATIONAL ELECTRO-MAGNETICS, inc.

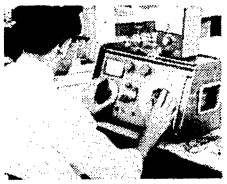
iem.

ERIC DRIVE AND CORNELL AVENUE, PALATINE, ILL., 60067, AC #312-358-4622



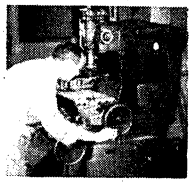
IEM with its ultra modern totally integrated facilities is one of the oldest and most dependable supplier of mass produced and special magnetics heads as well as magnetic recording systems. IEM's design files include many thousand different heads to meet a wide variety of applications.

All phases of manufacturing are computer controlled for fast, efficient service.



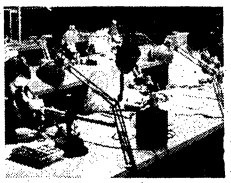
Electrical testing under laboratory conditions, NBS traceable.

FACILITIES CAPABILITIES QUALITY



Jig borer oriented machine shop represents the ultimate in precise machining.

Completely equipped machine shop for mass production of machined parts.



Proficient line personnel perform the delicate assembly operations.

Ultra precise mechanical checkout. NBS traceable accuracy.

Complete facilities for both engineering and fabrication makes IEM an ideal partner in your special short run requirements. Below are a few items developed with both customer and company sponsored programs.

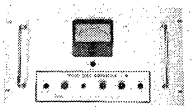
SPECIAL SYSTEMS

"Run-in" and Test Line for General Purpose Instrumentation decks

Check-out Line for IEM® "Run-in" Machine

Miniature Personal Recorder Measures 7/8" x 3½" x 5"

Two Station Semi-Automatic High Speed Cartridge or Cassette Tape Loader



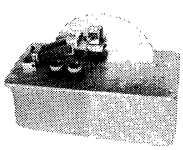
Bias Amplifier Mega Cycle Range Rated 50 Watts

The flux sensitive system represents an efficient method of sensing static magnetic information, making data output independent of tape speed.
The system is flexible, simple, and economical, the accuracy being mainly a function of the drive element. All circuitry is solid state utilizing plug in board, thus reducing maintenance and trouble shooting to within the scope of the average user.

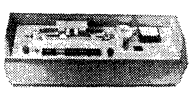
— USES —

- **FEEDBACK SYSTEM FOR POSITION CONTROL**
- **LOAD ACTUATION TO INITIATE AN OPERATION**
- **METERED OUTPUT FOR QUANTITATIVE MEASUREMENT**
- **LOGIC SYSTEM FOR NUMERICAL CONTROL**
- **TRIGGER CIRCUIT FOR COUNTING**
- **LINEAR RESOLVER**
- **ANGULAR RESOLVER**
- **ANALOG ULTRA LOW FREQUENCY PLAYBACK**

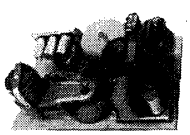
FLUX RESPONSIVE SYSTEMS



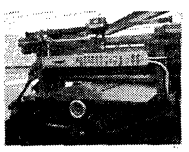
Angular Resolver



Flux-Sensitive Linear Resolver for Machine Control and Measuring Applications



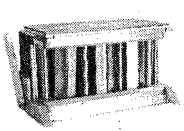
Analog Ultra Low Frequency Playback System Response to DC



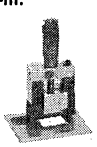
Flux Sensitive Programmable Machine Control System

Professional recording assemblies represent the state of the art for precision magnetic components. They encompass most of the standard and special recording formats and electronics. They can be incorporated for upgrading most existing professional equipment. They are also available as OEM equipment for systems manufacturers. All parts are precision ground for accuracy and permanent alignment. • Guide surfaces are of tungsten carbide for maximum life and accuracy. • IEM unique MEGA-BIAS design permits head change in seconds with positive azimuth and zenith lock-in.

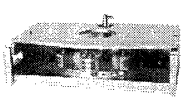
RECORDING ASSEMBLIES



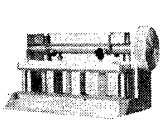
Complete 16 Track 2 In. System Incorporating Tape Lift Off, Flutter Rollers and Magnetic Shielding, for Up-Dating Studio Recorders.



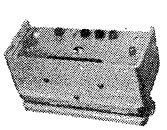
Micrometer Calibration Head



Turret Head Mount



Cam Actuated Head System for Ultra Precise Recording of Master Tape



Quick Change Mount with Integrated Bias Current Control Panel

Complete service for refurbishing, including cleaning, relapping, replacement of guides and inspection. Standard audio types — all formats. Duplicator types — slave and master assemblies. Video tape recorder audio heads. Complete conversion service for various tape formats.

REFURBISHING RECONDITIONING SERVICES

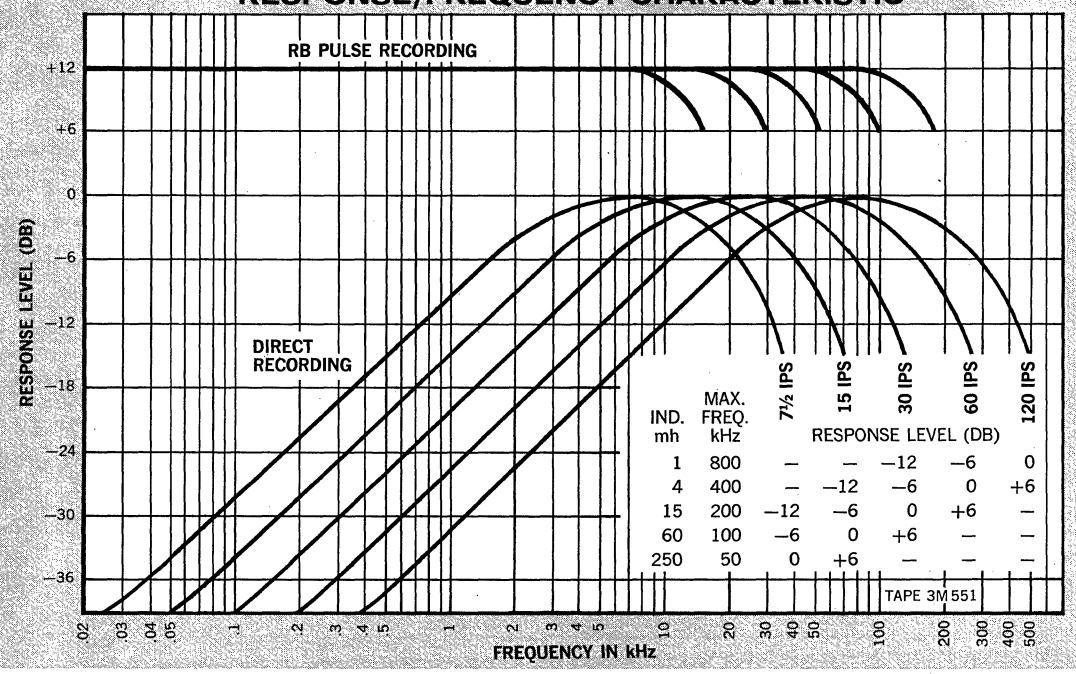
MULTITRACK

SERIES 2000/7500 — ERASE RECORD PLAY

RESPONSE/FREQUENCY CHARACTERISTIC



IND. mh	MAX. FREQ. kHz	7½ IPS	15 IPS	30 IPS	60 IPS	120 IPS
		RESPONSE LEVEL (DB)				
1	800	—	—	−12	−6	0
4	400	—	−12	−6	0	+6
15	200	−12	−6	0	+6	—
60	100	−6	0	+6	—	—
250	50	0	+6	—	—	—

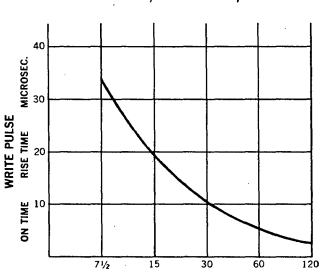
The Response/Frequency characteristics above, illustrate the exceptional performance of the Series 2000 thru 7500 Norton Magnetic Heads in direct and digital recording. The upper curves relate to the readback pulse amplitude for RB (return to bias) writing with the digital models and the lower curves relate to the unequalized playback amplitude of the analog models for constant current direct recording, both as a function of frequency (or rep rate). The five standard impedances available, together with the five tape speeds illustrated, total 25 different curves in each group, too many to clearly represent on a single chart. Pairs of inductance and tape speed are selected, which result in a set of curves peaking at the same level and having upper frequency limits proportional to tape speed. Therefore, the 1 mh inductance record/play response is at 120 ips; the 4 mh at 60 ips, and so on to the 250 mh response at 7½ ips. The other inductances are related to each as set forth in the included table. Each curve is at the same mv level as the others and so enables a quick comparison of level, frequency response, and required tape speed to achieve a desired performance goal. To read the curves, first refer to any Series found on the following pages, and note the Typical Operation data and the 0 DB playback reference level in mv rms for direct recording or +12 DB reference level in mv p-p for RB pulse recording. Then referring to the curves, calculate the response obtainable at the inductance and tape speed contemplated.

DIGITAL RECORDING

Selecting the 5500 Series from the following pages for analysis, the 60 mh track for RB pulse recording has a +12 DB reference level of 10 mv p-p at 15 ips. The readback pulse at 15 ips is 10 mv p-p and constant up to a 15 kHz rep rate, equivalent to a 1000 ppi recording density, with a 20 μsec, 3 ma p-p write pulse (rise time 20 μsec). At a faster rep rate of 30 kHz (2000 ppi) at 15 ips and a 10 μsec, 3 ma p-p pulse (rise time 10 μsec) the readback pulse is 5 mv p-p (10 mv less 6 DB) with all pulses present, and 10 mv p-p for an isolated pulse.

Writing and reading at 7½ ips the readback pulse amplitude of the 60 mh track is 5 mv p-p (10 mv less 6 DB) and flat to 7.5 kHz, with a 30 μsec 3 ma p-p pulse (rise time 30 μsec).

Full output is obtained up to a recording density of 1000 ppi with equal pulse on time and rise time at the values shown in the graph below. Operation up to 2000 ppi at reduced read amplitude requires halving these times. Increasing the times will reduce the recording density and readback level, and is not recommended. A better solution is to choose a lower inductance to preserve the recording density capability.



DIRECT RECORDING

Selecting the 2000 Series from the following pages for analysis, the 15 mh track for direct (bias) recording has a stated playback 0 DB reference level of 1.8 mv rms which at 30 ips is at 30 kHz. At 1 kHz the playback level drops to 0.15 mv rms (21 db below 1.8 mv). Operated at 7½ ips its 1 kHz and 30 kHz levels are both 0.15 mv rms (1.8 mv less 12 db less 9 DB). Increasing the inductance to 250 mh would increase the 1 and 30 kHz play level to 0.6 mv rms (1.8 mv less 9 DB) at 7½ ips. It can be seen that the short wavelength response to over 4000 cpi together with a maximum contour effect deviation of ±2 DB from the 6 DB/octave slope permits a useful bandwidth of over 10 octaves at any tape speed, and with the range of inductances available, permits the highest play level consistent with the frequency range of the system.

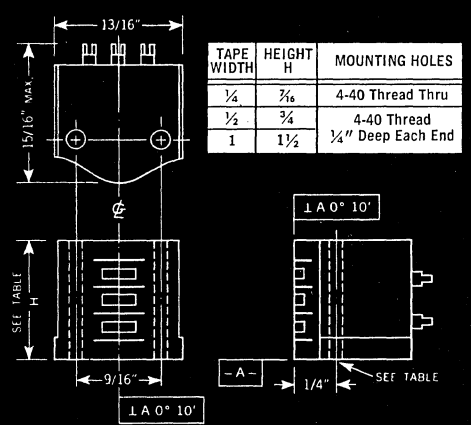
MULTITRACK
ERASE RECORD PLAY

STANDARD FEATURES SERIES 2000/7500

Standard features include extremely low crosstalk ratings and +75°C temperature operation without derating, plus a mechanical accuracy permitting hard mount or adjustable mount installation. Rugged solid metal construction, shock and vibration resistant, provides a hard, stable, low friction, long wear surface for the tape. The cores, shields and all metallic members are mechanically and electrically bonded together for effective electrostatic shielding and grounding of static charges. Precision finishing of the recording face to micro-inch tolerance insures intimate contact of the tape with every channel for uniformly excellent response independent of track location.

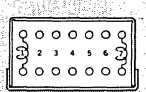
OUTLINE & MOUNTING DIMENSIONS



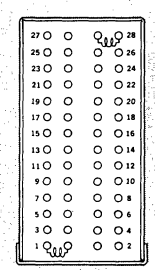
TAPE WIDTH	HEIGHT H	MOUNTING HOLES
¼	7/16	4-40 Thread Thru
½	¾	4-40 Thread ¼" Deep Each End
1	1½	

TERMINAL BOARD CONNECTION DIAGRAM

TERMINATION: Silver plated solder lugs on a high temperature glass-epoxy terminal board are standard on all series. Tracks are numbered from 1 through 28 (bottom to top). Start and finish terminal pairs of each track are correspondingly numbered and located as illustrated.



2 TO 7 TRACKS



8 TO 28 TRACKS

SELECTIVE ERASE HEADS

Multitrack selective erase heads to match the formats of the NORTON Series 2000/7500 units are available. All heads offer erase track widths at least 10 mils wider than the record tracks to insure full erasure. Outline and mounting dimensions are the same, and a standard 1 mh inductance is stock with other impedances available on request.

Erase heads for the Series 2000 and 3500 heads are a single unit with the same number of tracks and track spacing as the record head. Erase heads for the Series 4500 thru 7500 units consists of a pair of heads, each with double track spacing. Odd number tracks are on one unit, and even number tracks on the other.

Catalog numbers for the erase heads have the same Series number as the record head except for the suffix which changes to 1E as in the following example: Catalog #3510-1E is a 1mh erase head for use with the 10 track 1" tape head in the Series 3500.

ORDERING INFORMATION

To specify the complete catalog number for ordering purposes designate the Series number of the head you require, the inductance in mh and the function ie. Record (AR) only, Record/Play (ARP), or Play (AP) only for audio and analog applications: or Record (DR) only, Record/Play (DRP), or Play (DP) only for digital applications, as in the following example: Catalog #4507—15 DP which is the Series 4500, 7 tracks, 15mh Digital Play Head for ½" tape.

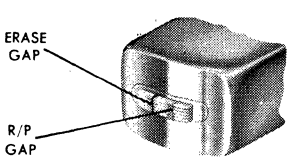
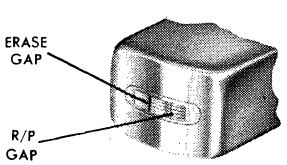
SMPTE—COMPATIBLE HEADS

- 1, 3 and 4 track. 35 MM. Heads.
- 1 track edge, center, and stripe 16 MM. Heads
- Mu Metal, Alfenol, or Ferrite Cores
- ½" and 1" frame sizes.
- Typical Specs: Gap lengths of 200 or 500 micro-inches, coil inductance 5 to 400 MHY.

NARROW TRACK AND EXTENDED POLE PIECE HEADS



"XZ" EXTENDED POLE



"Z" FLUSH FACE

***Z Combo — Type Z** — Combination erase and R P head places all three functions within a single head. Ideal for dictation machines, card readers and film stripe applications. "Close-coupled" gap provides internal bias coupling that simplifies required circuitry and permits accurate editing.

Type XZ offers additional advantage of extended pole tip (.010-.020 inches) for gap to oxide contact on hard or non-compliant surfaces.

***R/P Heads — Type X** — Extended pole tip R P heads feature high sensitivity mu-metal cores.

Type XA — Extended pole tip R P heads feature long wearing alfenol cores.

• R/P/E functions in one head; electrical data per tables.

MODEL ZJ2L Z-Combo

Record/playback and erase functions in one head for 8-track stereo applications. Patented unique "Z-Combo" construction places the erase and R/P gaps only .030 apart in the same pole structure, resulting in extremely accurate height alignment and tracking.

Advantages of Z-Combo Close-Coupled Gaps

- Initimate tape contact with single or no pressure pad
- Insures overlap alignment of erase when R/P section is azimuth aligned
- Prevents adjacent channel erasure in close spaced track configurations when R/P section is azimuth aligned

MODEL P-BQL

SUITABLE FOR HIGH SPEED DUPLICATORS, LOW SPEED LOGGING APPLICATIONS, AND GENERAL PURPOSE RECORDING AND PLAYBACK.

The NORTRONICS Premium Quality P-BQL four-channel magnetic tape head utilizes the most advanced design and manufacturing techniques. Fine-laminated cores and precision-deposited gaps give extended frequency response capability. Ideal as high speed slave heads for duplication of 8-track stereo at speeds up to 8X or 16X, with bias frequencies up to 750 KHz.

MODEL B2L-N

Standard playback — only or record/playback head for automobile or home type Stereo — 8 tape cartridge players. Premium version of above head is available with extra-fine laminated cores for improved high frequency response to 15 KHz at 3.75 ips tape speed. Also available Alfenol Premium record-only head for heavy-duty high speed duplicating applications. Give five times normal life.

PBQQ

Typical Applications—Instrumentation recording including carrier modulated types such as AM, FM or Pulse, as well as straight digital and analog recording. Tracks of the P-BQQ head are compatible with the 4-track stereo system making it ideal for audio duplication, background music and 4-channel in-line stereo.

"L" SERIES
(5/16"W x 5/16"H x 3/8"D)

"M" SERIES
(1/4"W x 1/4"H x 1/4"D)

PR SERIES

- Sets a new standard for high performance magnetic heads.
- Unexcelled response from 20HZ to 20KHZ.

Professional series full track—PR-B1F, designed especially for long wave length response with extra wide pick-up poles, smooth response characteristics are obtained to below 20HZ. Fine precision lapped laminated core stacks and deposited gaps extend short wavelength response. Extra deep deposited quartz gap.

Companion PR-B1EF ERASE also available.

MINIATURE TAPE HEADS

TYPICAL APPLICATIONS — Magnetic drums and discs, magnetic stripes on motion picture film and miniature tape recorders. When used with magnetic drums, discs and film stripes, it is recommended that a projecting track version be selected.

NORTRONICS ACCESSORIES

Bias Oscillator Transformers, Connector Plugs, Plug & Cable Assemblies, Pin Clips, Clip & Cable Assemblies, Contactor Heads, Tape Guide Posts, Mounting Brackets.

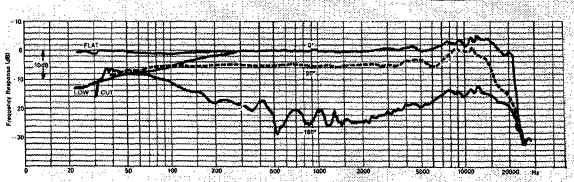
CONDENSER MICROPHONE UNI-DIRECTIONAL CMU-503

The Primo Model CMU-503 Condenser Microphone has excellent audio properties and stable characteristics, making it suitable for diverse applications. Whether your talking about a large wind and string orchestra, a small group, or plain indoor music of a classical or popular, this microphone will satisfy any and all requirements. It may be used for group or solo pickup, or for vocals, choral jazz, or group singing. Whatever the task, quality performance is yours.



For Using
1. Broadcasting 2. Studio recording

SPECIFICATIONS
- Directivity: cardioid
- Sensitivity: −67dB ±1.5dB/μbar at 1KHz
- Impedance: 600 ohms ±10%
- Signal to noise ratio: 53dB ±3dB (Equivalent self noise −21dB ±3dB)
- Maximum in put level: 134dB distortion: 0.7%
- Attenuator: −10dB
- Tone controll: M − flat, V − −6dB at 100Hz
- Power supply: DC SYSTEM DC − Battery, Marolly H7D/A (or Everedy E126)
- Operation hours: 200 hours (continuous)
- Dimensions: 21φ×145mm(mic.)
- Cable length: 6m (with cannon 3p connector)

MAIN PRODUCTS:
- HEADPHONES
- MICROPHONES

SEAS LOUDSPEAKERS AND SYSTEMS FOR EVERY APPLICATION

innovative electroacoustic technology backed by traditional Scandinavian craftsmanship

The specifications and curves below indicate the calibre of products comprising the SEAS line of speakers, crossovers and systems. But besides the extended range, flat response, high efficiency and good power handling capabilities, these speakers feature something not revealed in the specifications. Craftsmanship. The kind of old-world dedication in every step from design through manufacture that insures consistent product quality and durability. Backed by second- and third-generation speaker craftsmen using the latest production and test equipment.

Of especial note are SEAS' unique BAFF-L-KITS, which permit the manufacturer to install a pre-matched, fully-assembled and pre-wired *system* into the housing of his choice.

Needless to say, the speakers below represent only a small sampling of the more popular speakers in our line. For further information on these speakers, systems and crossovers, as well as other stock items and custom-manufactured units available in quantity, please write or call us.

SPEAKERS FOR 2- AND 3-WAY SYSTEMS*

The specifications and curves below indicate the kind of performance you can expect from SEAS high fidelity speakers. But their prices indicate SEAS means as much in value as it does in performance.

	Model	Diameter Power Rating	Frequency Range Cone Resonance	Magnet Weight Flux Density	Weight Depth	Frequency Response
TWEETERS	**5TV-HF** Economy tweeter with extended-range response	2″ 6W	3-20kHz 1kHz	1 oz. 11,500 G	5 oz. 1¼″	
	DOME-87H Deluxe tweeter with professional linearity and high power capability	1½″ 50W	1.5-20kHz 1kHz	6½ oz. 13,000 G	1 lb., 5 oz. 2⅜″	
MIDRANGE	**9TV-LG** Midrange with linear response extending to 20kHz	3½″ 16W	1-20kHz 300 Hz	2 oz. 11,500 G	9 oz. 2⅛″	
	15/11TV-2XM Bi-radial midrange with flat response, high power capability	6x4″ 24W	300-6,000 Hz 100 Hz	5 oz. 12,000 G	1 lb., 1 oz. 3⅛″	
WOOFERS	**21TV-EW** Compact low-resonance woofer	8″ 40W	35-2,000 Hz 27 Hz	6½ oz. 5,500 G	1 lb., 3 oz. 3½″	
	25TV-EW Moderately-priced low-resonance woofer with excellent response, good power capability	10″ 70W	30-1,500 Hz 23 Hz	6½ oz. 5,500 G	1 lb., 15 oz. 4″	
	30WK Deluxe woofer with ultra-low resonance, high-power capability, extremely linear response	12″ 100W	30-500 Hz 20 Hz	26 oz. 11,000 G	5 lbs., 5 oz. 6″	

BAFF-L-KITS™*

A unique concept in speaker system design. Speakers and crossover networks are "pre-packaged" on rigid black chip-board. Speakers and crossover networks are chosen for maximum compatibility. Holes are pre-cut; mid-range and tweeters are individually baffled. Wiring is already done and grille-cloth supplied. While ideal for the home hobbyist, SEAS BAFF-L-KITS are also ideal for manufacturers who prefer to save labor with ready-made systems, custom dealers, etc.

Model	Power Rating	Response with Infinite Baffle Volume of . . .	Dimensions Weight	Speaker Complement and Crossover	Crossover Frequency
81K Ideal 2-way system where space or economy are important. Exceptional sound at a low price	20W	55-20,000 Hz ½ cubic foot	19¼″Hx8¼″W x4¼″D 4½ lbs.	Woofer: 17TV-W (6½″) Tweeter: 9TV-HFT Crossover: H801 2-way	4,000 Hz
84K Performance equal to systems many times its moderate price. Features unusually linear response, good power capability in a full 3-way system	50W	43-20,000 Hz 1 cubic foot	22½″Hx9½″W x4½″D 8 lbs.	Woofer: 28/17TV-GW (11x7″) Midrange: 3TV-LG Tweeter: 5TV-HF Crossover: H805 3-way	1,500 Hz 4,000 Hz
85K Compares favorably with the finest systems on the market. Ultra-linear, full-range response, wide dispersion, high power capability, yet may be mounted in bookshelf-sized enclosure	100W	25-20,000 Hz 3 cubic feet	27½″Hx21½″W x6″D 28 lbs.	Woofer: 30WK (12″) Midrange: Two 15/11TV-LG-M Tweeter: Three 9TV-LG Crossover: H806 3-way	300 Hz 2,800 Hz

CROSSOVER NETWORKS

Sound design and no compromise in construction make these networks ideal for all types of 2- and 3-way systems. Heavy coils and quality capacitors insure excellent performance.

H801 H803 H805

H801	Two-way circuit with crossover frequency of 4,000 Hz	H803	Three-way circuit with crossover frequencies of 700 and 3,000 Hz
H805	Three-way circuit with crossover frequencies of 1,500 and 4,000 Hz	H806†	Three-way circuit with crossover frequencies of 300 and 2,800 Hz

*Unless otherwise specified, all speakers have 8-ohm impedance.

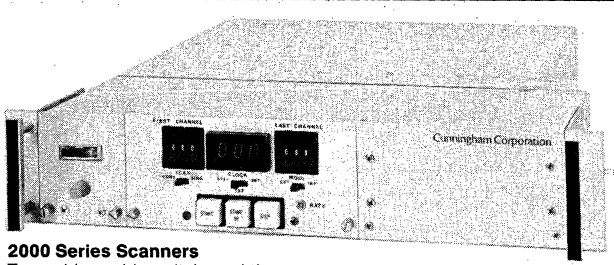
SEAS

We build our reputation by hand. Into every speaker.

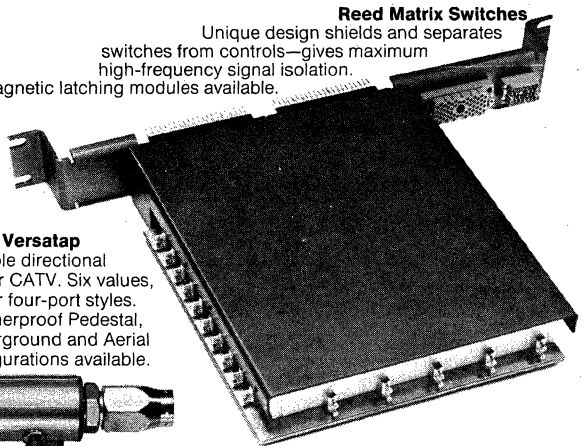
Cunningham:
Unparalleled reliability in multi-point switching, scanning, CATV equipment, CCTV systems.

For over 16 years, a winning combination of experience and equipment for your audio, video, testing, scanning and many other needs. Here's a quick look at some of our latest winners:

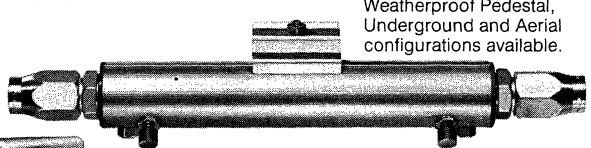


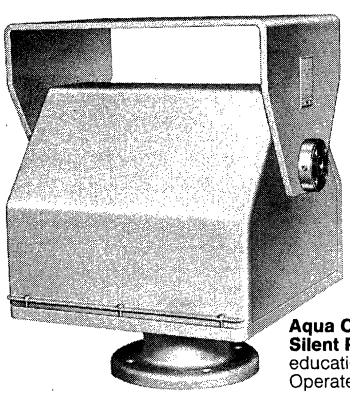
2000 Series Scanners
Two addressable switch modules (crossbar and reed) plus scanner control. Purchase complete or as separate units.

Reed Matrix Switches
Unique design shields and separates switches from controls—gives maximum high-frequency signal isolation. Magnetic latching modules available.

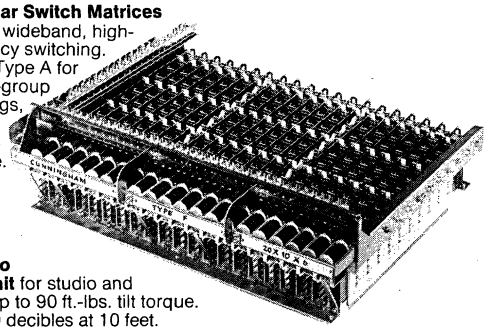


Aqua Versatap
Reliable directional tap for CATV. Six values, two or four-port styles. Weatherproof Pedestal, Underground and Aerial configurations available.





Crossbar Switch Matrices
Ideal for wideband, high-frequency switching. Type A for group-to-group switchings, Type F for group-to-one.



Aqua CCTV Studio Silent Pan/Tilt Unit for studio and educational use. Up to 90 ft.-lbs. tilt torque. Operates below 30 decibles at 10 feet.

SUBSIDIARY OF GLEASON WORKS

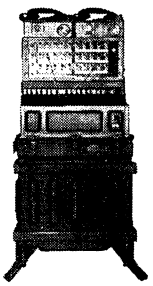
TELEPHONE EQUIPMENT

FOR MILITARY and COMMERCIAL APPLICATIONS

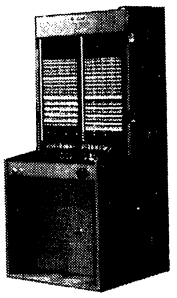
SWITCHBOARDS • CENTRAL OFFICE EQUIPMENT • HANDSETS • COMPONENTS • EARPHONE & MICROPHONE ELEMENTS • ACCESSORIES

TELEPHONE SWITCHBOARDS, CENTRAL OFFICE EQUIPMENT AND HANDSETS

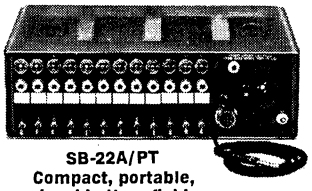
We are prime producers of manual and dial military switchboards, central office equipment and versatile handsets for many applications. Telephone facilities from 12 to 1,000 lines can be provided, for up to 160 manual or dial trunks, with our various equipments. Adaptations of standard equipment can be made to specifications.



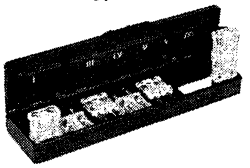
SB-86/P
Portable, local battery, field type manual switchboard.



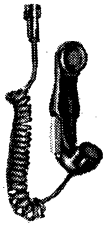
Complete, transportable manual telephone central office.



SB-22A/PT
Compact, portable, local battery field type switchboard.



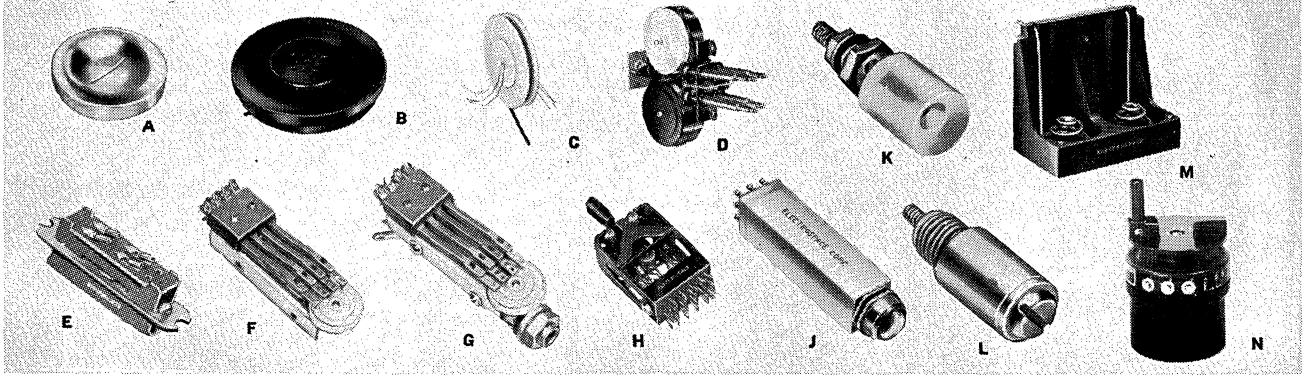
SB-993
Manual telephone switchboard for stacking conference calls.



H-33F/PT
Waterproof handset supplied with U-161/U connector.

TYPICAL TELEPHONE COMPONENTS

Widest Choice Available of Components, Elements and Accessories To Meet All Requirements.



(A) B3001P-1 MICROPHONE ELEMENT. Carbon capsule. Impedance: 40 ohms nominal. Frequency Response: 300-4000 Hz. Temperature Range: —40°F. to +150°F. Adaptable to standard WECO handsets. Made to MIL-M-11095A.

(B) C3001P-10 EARPHONE ELEMENT. Magnetic type. Impedance: 300 ohms nominal. Frequency Response: 300-4000 Hz. Temperature Range: —40°F. to +150°F. Reliable mechanical and acoustical stability. Adaptable to standard WECO handsets. Made to MIL-H-11134D.

(C) D3014-362 REEL & CABLE ASSEMBLY, RETRACTABLE. Accepts various cord types and sizes. Extends cord up to 4 ft. Provides neat, convenient cord storage. Readily applicable for use in telecommunication systems, test equipment, and others.

(D) D3014-318 TELEPHONE SWITCHBOARD MODULE. Shows typical application of Reel & Cable Assembly (—362) for field or stationary switchboards.

(E) B3001-18 BAR SWITCH. Double pole. 1 amp. 30V D.C. contact rating. Instantaneous actuation with nominal pressure at any point on bar. Operating life tested in excess of 500,000 cycles.

(F) C3014-105 THUMBWHEEL SWITCH. Flat, horizontal construction saves valuable panel space. One-finger operation. Permits multi-position, multi-circuit control. Heavy duty contacts mounted on leaf springs.

(G) D3014-76 THUMBWHEEL SWITCH & JACK ASSEMBLY. Shows typical application of switch (—105) with switchboard plug-in jack.

(H) D3014-320 LEVER SWITCH. Exceptionally rugged construction provides greatest operation dependability. Positive detent action. Return spring design reduces contact bounce and chatter. Three-position, multi-circuit contacts available.

(J) C3014-77 SIGNAL INDICATING RELAY. Requires only ¾" dia. panel space. Gives positive indication of relay operation. Combines signal-relay operation in one package. Operable from either of two individual coils.

(K) D3014-38 HOLE-IN-HEAD BINDING POST. Saves space. Provides easy, convenient, positive connection. Wire inserted at front of post instead of side. "PUSH-INSERT-RELEASE" — wire positively locked in place.

(L) B3014-39 CIRCUIT PROTECTOR. Reusable protective device for communication systems. Shorts the circuit to be protected against high voltage surges. Factory adjustable to break-down voltage required.

(M) B3014-54 BATTERY BLOCK. Provides convenient storage and method for connecting two "D" size cells into circuit.

(N) G-42A/PT HAND RINGING GENERATOR. Used for ringing field telephones. Centrifugally operated switch operates at a crank speed of about 140 rpm. The generator delivers 100 volts at 20 cycles at a crank speed of 200 rpm.

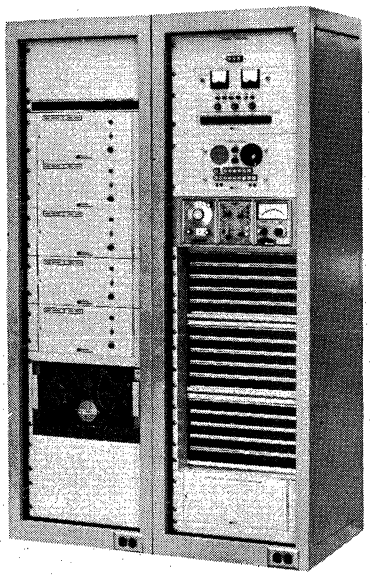
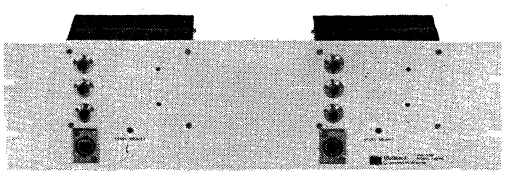
Multitech Communications

Multitech Communications (a Multitech Company) is concerned with the development and production of total communications systems including Telephone and Telegraph Switching Systems, Audio Monitoring Systems, Signaling Systems, Alarm Systems and Computer Peripheral Equipment Interface Systems.

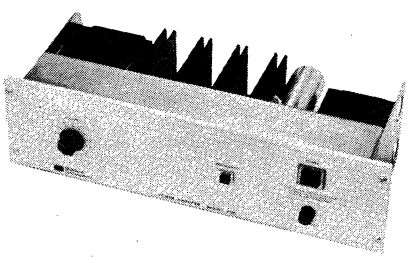
Products manufactured by Multitech Communications include: Line and Port Finders, Line Concentrators, Modems, Data Sets, Acoustic Couplers, Individual Jackfields, Terminal Blocks and Patch Cords, Multitech Communications is also a major supplier of Patch Panels to the military and communications industry.



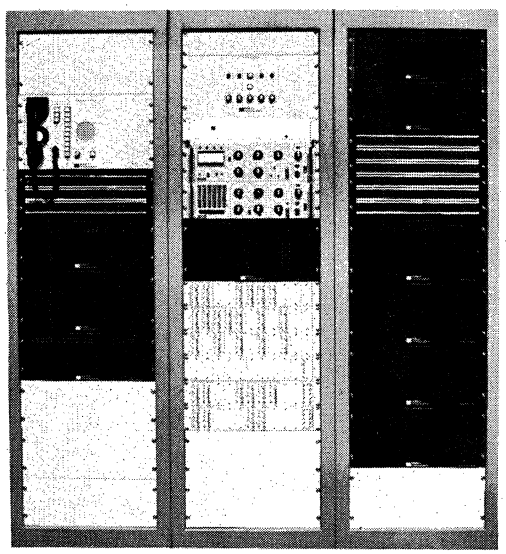
Model 7409 is a Voice Paging and Intercom System, which provides 33 intercom stations each having access to six networks, PABX, time announciator, and five 50 watt paging amplifiers.



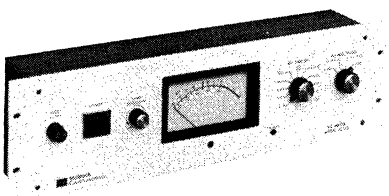
Model 750 Dual Audio Preamplifier utilizes integrated circuits and glass epoxy printed circuit boards for high reliability. H.D. & I.M. distortion are less than 2%. S/N ration is greater than 120 db. Dual rack mounted unit is shown.



Model 700 Audio Power Amplifier is an all solid-state silicon design intended for commercial and industrial paging and music systems. It features THD of less than 1% and IMD of less than 0.3% over its frequency range of 20-20,000 Hz at full output of 50 watts RMS. Unit is UL approved and has built-in output short circuit protection. Other solid-state designs up to 120 watts RMS with automatic gain changing to compensate for ambient noise condition are available. Inquiries for specific applications are invited. O.E.M. inquiries are welcome.



Model 7410 is an all Solid State System with Internal Processor and Core Memory used to switch Engineering Service Circuits between 2 Satellite Earth Ground Stations. TTY line Concentrator and FSK Modems are provided.



Model 522R VU Meter consists of one 4½-in. VU meter indicators mounted on a single 5¼-in. high panel. The panel mounting is for EIA standard 19-in. rack. Each VU meter has an input impedance greater than 10,000 ohms and a source impedance of 150 ohms. The VU meter circuit uses all silicon solid-state semiconductors for extremely long life. Model 522R features a calibration control and an input expander. The expander being at —20 VU, then proceeds to +40 VU in 2 VU steps. The last step on the multiplier is an OFF position. The VU meters may be recalibrated to operate off a 600 ohm source by changing one resistance value.

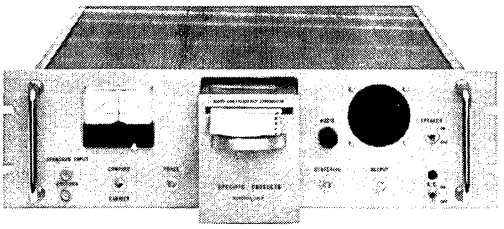
STANDARD TIME & FREQUENCY RECEIVERS

TIME & FREQUENCY STANDARDIZATION TO THE NATIONAL BUREAU OF STANDARDS

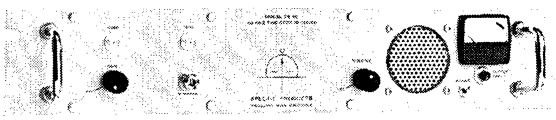


MODEL 650
60 KC PHASE COMPARATOR RECEIVER

Calibrates any local standard up to 5 - 10^{10} within a short period.

The Model 650 is the first low cost VLF Phase Comparison Receiver designed to permit phase comparison measurements between a local oscillator and the National Bureau of Standards transmitted 60 Kc/s from WWVB, Fort Collins, Colorado. The receiver is a straight-forward Tuned Radio Frequency receiver and can be used in any location in the United States with highly satisfactory results. Can be operated by any technician.

PRICE: $830.00



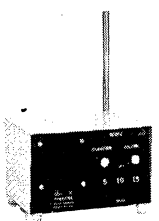
MODEL CS-60
60 KHZ TIME CODE RECEIVER

HIGH POWER • LOW CURRENT

A new, low current drain time code receiver, so sensitive that it will receive NBS signals from 2,000 or more miles away. Original and unique circuitry developed at the Seismological Laboratory in Pasadena, California. The unit will receive Radio Station WWVB signals, considered to be the most accurate time signals available. Intermediate frequency is 2kHz. It is designed for long term, remote, unattended operation as it requires power of only + 12 vdc ± 1 vdc at 1.5 ma without audio (35 ma with audio).

PRICE: MODEL CS-60A $595.00

Battery powered portable field unit available.

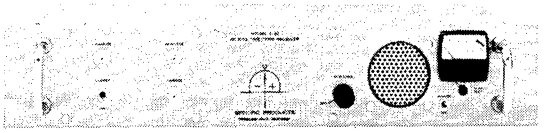


TYMASTER
Ten-36 Model

Low Cost • Portable

For navigation, astronomy, automotive rallies and all other activities where accurate time is a must. Operating on frequencies of 5, 10 and 15 MHz, this new unit will receive time signals from WWV and WWVH. Crystal controlled and push button selection. Hundreds of hours of operation on 8-"C" cell batteries. Size 5½"D x 6"W x 4"H. Panel is white on black with case in bright red or commercial grey.

Price: $92.50 each.



MODEL T-60 60 KHZ TIME CODE RECEIVER

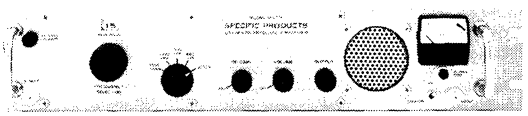
• Round The Clock Binary Time Code Broadcasts from WWVB • Most Accurate Time Signal Available • Can Be Recorded Continuously

Radio Station WWVB is broadcasting complete time information using a level shift carrier time code (10 db level changes). This code, which is binary coded decimal (BCD) is broadcast continuously and is synchronized with the 60 khz carrier signal. The Schmitt BCD output can be completely automated for continuous monitoring of extremely accurate real time and time interval information.

PRICE: MODEL T-60A $495.00

3½" x 19" rack panel with 5" depth behind panel. Includes 117v, 50 to 400 cps supply, or an external 12 to 16 volts may be used.

Battery powered portable field unit available.



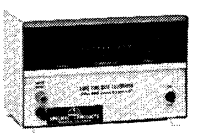
MODEL WVTR WWV RECEIVERS MARK II
All Silicon Transistor

COMPLETE MODULAR CONSTRUCTION • CERAMIC FILTERS DOUBLE SHIFT SUPERHETERODYNE • 1 μV SENSITIVITY

Crystal controlled front end receivers for 2.5, 5, 10, 15, 20 and 25 MHz frequencies. 2nd I.F. frequency for high selectivity. Has built-in filter for ticks and tones. Receiver has carrier level "S" meter, speaker and output jack on front panel. Audio output available on rear.

PRICE: $680.00 with AC Power Supply

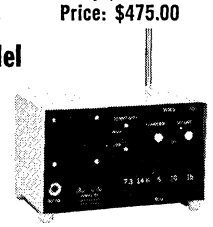
Battery powered portable field unit available.



MODEL 630
60 KHz TIME BASE CALIBRATOR

A solid state receiver designed to receive NBS station WWVB offering low cost, calibration of 1 MHz time bases to WWVB, a time code output, long time constant AGC, recorder output and ferrite antenna. A 60 KHz crystal oscillator is locked to the WWVB signal and the oscillator frequency is then converted to 100 KHz and compared against the externally supplied 1 MHz signal by a unique digital comparator. Weight: 4 pounds for the unit and 3 pounds for the antenna, the Model 630 is easily portable. Size of the unit is 5"H x 8"W x 6"D. **Price: $475.00**

TYMASTER Ten-36 Sr. Model



Similar in operational features to the Ten-36 TYMASTER, except offering five operating frequencies: 7.3, 14.6, 5, 10 and 15. Light weight, compact and easily portable.

Price: $145.00

Send for complete specifications. Prices and specifications subject to change without notice. F.O.B. Monrovia, California. Net 30 days.

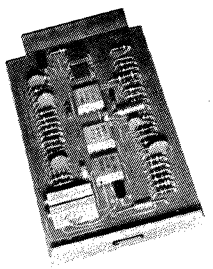
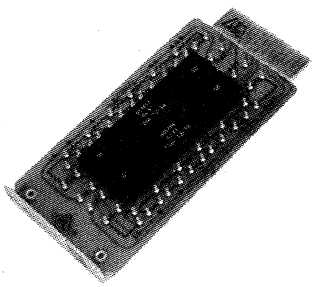
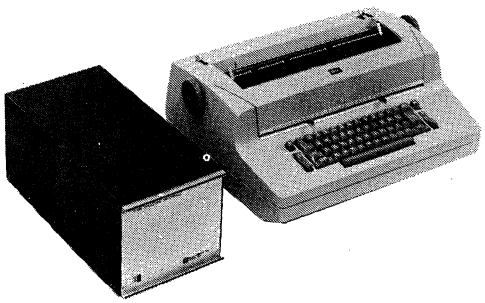
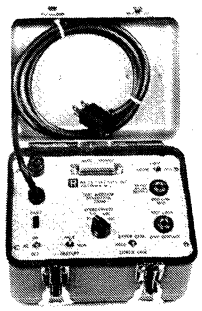
PRODUCTS FOR COMMUNICATION









INTERFACE

IBM SELECTRIC* INTERFACE C181

The C181 Selectric* Interface is a completely solid state device which performs all the necessary code translation, level interface and control functions necessary to interconnect either an IBM Model 731 or 735 "Correspondence" coded Input/Output writer to a computer I/O buss or simular data input/output device.

FEATURES:

- Low Cost
- Solid state, modular construction
- ASCII input and output codes
- Direct connection to computer I/O buss
- No additional circuitry required
- Stand alone or rack mount
- Selectric* magnets protected against burnout

APPLICATIONS:

- Minicomputer I/O device
- C.R.T. hard copy printout
- Data logging
- Information Retrieval Systems
- Automatic Test Systems
- Industrial Control

* IBM Registered Trademark

PASSIVE NETWORKS

C-301 — FIXED PAD

Dual fixed 600 ohm Attenuator. Choice of 7 or 16 DB or combination of both. **$15.00**

C-302 — SINGLE ADJUSTABLE PAD

Same specifications as C-303 with exception that this board contains only one strappable pad. **$21.00**

C-303 — DUAL ATTENUATOR

The C-303 dual attenuator contains two independent adjustable 600 ohm pads. The adjustment is via soldered straps and is in increments of .25 DB. **$40.00**

FEATURES/SPECIFICATIONS:

- Low cost — Easily adjusted
- High density — 2 pads per board
- Interchangeable with RE-EL circuits C-311 line amplifier
- 600 ohm balanced "O" pads
- 31.75 DB maximum attenuation
- Card size 2.6" x 5.6" x .5"
- .05% precision resistors

CONDITIONERS

C-311 — LINE AMPLIFIER

The C-311 is a voice frequency Line Amplifier designed for use in high grade data communication circuits. Its excellent amplitude and delay distortion characteristics, low harmonic distortion, low noise output and 32 DB gain are necessary for operation of reliable data transmission. **$67.00**

FEATURES:

- Small in size 5.5" x 2.6" x 0.5"
- 20 turn gain adjustment
- Plug in mount on ½" centers

SPECIFICATIONS:

- 600 ohm balanced input/out
- Frequency response ±.5 DB from 300 HZ to 4K HZ
- Delay response less than 50 microseconds 500 HZ to 3K HZ
- Maximum output +12DBM
- Harmonic distortion less than 1% at rated output
- Noise less than 65 DBM

C-312 — 1 WATT POWER AMPLIFIER

The C-312 is a voice frequency power amplifier which delievers one (1) watt into an 8 ohm speaker load. The unit is ideal for line monitoring applications. Gain adjustments are made by either an internal 20 turn potentionmeter or with an external "volume" control potentiometer. **$45.00**

FEATURES:

- Small in size 5.5" x 2.6" x 1.0"
- 20 turn internal gain adjustment
- Plug-in mount on 1" centers

SPECIFICATIONS:

- OUTPUT — 1 watt into 8 ohms
- INPUT — 10K ohms
- FREQUENCY — 20 HZ to 15K HZ
- REQUIRES — 12 to 24 VDC

C-314 — SUMMING AMPLIFIER

The C-314 Summing Amplifier contains three (3) balanced and isolated inputs and one (1) balanced isolated output. Strappable pads on all of the inputs allow precise control over the relative levels of the various signals. The combined signal gain can be adjusted with the master level control. **$300.00**

FEATURES:

- Completely solid state
- Three balanced isolated inputs
- One balanced isolated output
- Independent level adjustments on all inputs and outputs
- Level adjustment in .25 DB steps to 31.75

C-315 — DISTRIBUTION AMPLIFIER

The C-315 Distribution Amplifier contains one balanced isolated input and three balanced isolated outputs. Strappable pads provide independent output level control for each output. **$250.00**

FEATURES:

- Completely solid state
- Three balanced isolated outputs
- One balanced isolated input
- Independent level adjustments on all outputs

SIGNALLING

C-323 — CLUTCH PULSE GENERATOR FORM A OUTPUT

The C-323 Clutch Pulse Generator is designed for use where pulses are required for controlling clutch lines such as those that would be used on tape readers. The mercury wetted output relay allows its use on low to medium speed data systems. **$76.50**

FEATURES:

- Individually adjustable speeds (20 turn pot)
- External control lead. Ground turns output off.
- Small in size 2.6"x5.5"x0.5" (less switch handle)

SPECIFICATIONS:

- Speed range — 60 milliseconds to 750 milliseconds
- Pulse width — adjustable from 10 to 60 MS
- Accuracy — Less than 1% error
- Temperature stability — less than 1% drift from 20°C to 65°C
- Requires 12V DC 20 MA
- Output contacts rated at 100VA

C-323A — CLUTCH PULSE GENERATOR FORM C OUTPUT (WITH SPEED SWITCH)

Same as C323 but has Form C relay output and speed selector switch on front handle. **$88.00**

SWITCHING

C-331 — LOOP SWITCH

The C-331 is a switching module designed for looping or bussing back a four wire V.F. line. The loop back can be strap selected to contain attenuation for level compensation if desired.

FEATURES:

- Sealed Reed switching contacts
- Plug in relays
- Small in size 2.6" x 5.5" x 0.5"
- Plug in mounting ½" centers
- Precision attenuator resistors (1%)
- Relays available in 12, 24 and 48 VDC coils
- Coil arc suppression diodes standard

C-332 — SWITCHING RELAY

The C-332 is a switching Relay board containing a four (4) pole double throw Reed relay with suppression diodes. It can be utilized for line transfer or any requirement for switching four (4) wires from one point to another. **$63.00**

FEATURES:

- Small size 2.6" x 5.5" x 0.5"
- Sealed Reed switches throughout, plug in
- Coil voltages available from 12 to 48 VDC
- Coil suppression diodes standard

C-33 — SWITCHING: MATRIX BOARDS

Numerous switching functions are available from single function relay boards thru complex XY selection units which are modularly expandable to fit your exact needs. **Custom, Per RFQ**

CONTROL/SUPERVISION

C-341 — ORDER WIRE

The C-341 order wire is designed to allow voice access to a V.F. circuit. The C-341 provides talk battery to the mouthpiece of a handset or headset (not supplied). The C-341 is isolated from the line via transformers and presents a high impedance load to the line it bridges. Talk/listen directions are controlled by relays provided on the unit. **$60.00**

FEATURES:

- Isolated input/output
- Adjustable talk level
- Control relays for talk/listen direction on four wire lines
- Powered from 12, 24 or 48 VDC
- Small in size, plug in card 2.6" x 5.5 " 0.5"

C-343 — TOGGLE SWITCHBOARD

Toggle Switch board provides a simple modular method for placing control switches into circuits. Five (5) SPDT toggle switches are mounted on the front handle and are wired to the printed circuit board. **$33.00**

FEATURES:

- Small in size 2.6" x 5.5" x 0.5"
- High quality miniature switches

ALARMS

C-351 — SIGNAL FAULT ALARM

THE SIGNAL FAULT ALARM C-351 is a low cost Data-Telegraph monitoring unit designed for Signal speeds up to 200 bauds. The C-351 gives alarm outputs for pre-set signal distortion and open line. **$42.00**

FEATURES:

- All solid state construction
- Small in size 2.6" x 5.6"
- Powered by a single 12 volt supply
- True open line alarm (zero (0) volts)
- Alarm outputs supply ground for up to 200 volts and 2 amperes
- Single adjustments for marking & spacing thresholds
- Open line adjustment range (non-interacting with distortion adjustments) from 30 milliseconds to over 3 seconds
- 2% +45% distortion range

C-351A — SFA WITH ISOLATED INPUT

Same as 351 but has fully isolated low impedance input. **$52.00**

C-352 — CARRIER DETECT

The C-352 Carrier Detector is designed for detecting the presence of a voice frequency level. The threshold, level point at which the presence of signal is detected, is adjustable by means of a 20 turn potentiometer on the unit. **$52.00**

FEATURES:

- Small size 2.6" x 5.5" x 0.5"
- Completely solid state
- High impedance input greater than 10K ohms
- Threshold adjustable from −30 to +10 DBM
- Alarm output, logic, relay or SCR

C-353 — DUAL CARRIER DETECT

The C-353 is a dual level detector designed to detect equipment failures. The C-353 operates on the voice frequency range. The high impedance detectors are bridged across the input and output of a unit and will give an alarm output upon failure of the equipment in between. **$95.00**

FEATURES:

- Adjustable input/output detector thresholds
- Alarm output — 12 volts at 20 MA
- Lamp driver output on each detector shows presence of signal
- Small in size 5.3" x 5.5" x 0.5"
- Plug-in printed circuit board
- Range −30 to +10 DBM
- Input impedance greater than 10K ohms

C-354 — HI/LOW CARRIER DETECT

The C-354 hi/low detector is designed to present an output alarm when a voice frequency level falls above or below a pre-set level spread. Ideal for use in maintaining proper operating parameters of voice frequency systems. **$105.00**

FEATURES:

- Separate hi-low thresholds
- Threshold spread adjustable from 4 DB
- Alarm output — dry contact Form "A" relay
- Small in size 5.3" x 5.5" x 0.5"
- Plug-in printed circuit board
- Range upper limit −30 to +10 DBM lower limit 4 to 20 DB below upper limit
- High input impedance greater than 10K ohms

INTERFACE

C-361 — 2/4 WIRE TTY HYBRID

The C-361 2/4 Wire Hybrid was designed for use where conversion between two (2) wire and four (4) wire teletype transmission is required. **$41.00**

FEATURES:

- All solid state
- 20 or 60 MA in/out — up to 120 VDC
- Small in size 2.6" x 5.5" x 0.5"

C-362 — EIA TO TTY CONVERTOR WITH 2/4 WIRE HYBRID

The C-362 is a EIA to TTY convertor. This unit converts standard EIA levels to 20 or 60 MA keyed teletype signals. Two way conversion i.e., EIA to TTY and TTY to EIA is provided along with a hybrid strapping option allowing 2 to 4 wire conversion. **$41.00**

FEATURES:

- All solid state
- Plug-in printed circuit board mounts on ½" centers. Size 2.6" x 5.5" x 0.5"
- Accepts neutral or polar TTY input
- Strap option for 20 or 60 MA operation

C-363 — E/A TO HIGH LEVEL CONVERTER (LOOP REGULATOR)

The C-363 unit operates in the same manner as the C-362. It is also equipped for several plug-able options for various input-/output modes. Among these are loop current regulators, solid state isolators, keyed regulator and solid state polar regulated or unregulated unit. **$165.00**

FEATURES:

- All solid state
- Contains 2/4 wire hybrid
- Plug-in printed circuit board 4.5" x 12.0 x 1.5"
- Strapping options for 20 or 60 MA operation

TEST EQUIPMENT

C-391A — TEST MESSAGE GENERATOR BAUDOT $459.50

C-391B — TEST MESSAGE GENERATOR ASCII BAUDOT $561.50

C-391C — TEST MESSAGE GENERATOR ASCII / SPEED TO 4800 $582.00

C-391 — TELETYPE TEST MESSAGE GENERATOR

The C-391 Teletype Test Message Generator is a completely self contained portable transmitter which supplies a low distortion Baudot coded test message for machine or line evaluation. Dual output circuits are supplied; a solid state, polarity insensitive neutral loop keyer, and a keyed 60 milliampere current regulated output. Standard models provide four switch selected speeds. Options include speeds, codes and output levels other than the standard combinations.

FEATURES:

- PORTABLE — Rugged carrying case, 5" x 6" x 6"
- VERSATILE — Baudot and/or ASCII codes
- SWITCH SELECTED SPEEDS
- DUAL OUTPUT — Dry and 60 MA regulated

OPTIONS AVAILABLE:

- XTAL Control • EIA Output
- Speeds to 9,600 Band
- Distortion Insertion • Clutch Leads
- Switch Selected Single or Dual Character
- Custom Messages

SPECIFICATIONS:

- MESSAGE — "The quick brown fox . . . .
- MESSAGE LENGTH — 64 ASCII or Baudot characters
- ALL SOLID STATE
- KEYING CIRCUITS — Dry solid state 100 MA 200 V MAX — Auto Loop Regulated, 60 MA into 250 ohm MAX, short circuit proof—EIA output levels on ASCII coded models.
- SPEEDS — C391A — 45, 50, 56.8, 75 Baud
  — C391B — 75, 110, 135, 150 Baud
  — C391C — 150, 300, 600, 1200, 2400, 4800 Baud
- CODES — C391A — Baudot
  C391B — ASCII or Baudot
  C391C — ASCII

SUB-SYSTEMS

C-411 — REGENERATIVE SELECTOR MAGNET DRIVER

C-411 is a combination unit containing a signal regenerator as well as a selector magnet driver. It can accept a distorted input signal, re-construct a distortionless signal which in turn drives the selector magnet driver. The output of the selector magnet driver delivers an undistorted 60 MA keyed signal to the teleprinter. The complete unit can be mounted in the electrical service unit of a standard M-28 Teletype* or any other mounting desired. Plug-in replacement for existing drivers. **$98.00**

FEATURES:

- Distortion correction marking or spacing up up to 49%
- Small in size 4.5" x 3.0" x 3.75"
- Powered by 115V 60 HZ
- Input — polar or neutral 20 to 60 MA up to 120 VDC

C-414 — CRYSTAL CONTROLLED REGENERATOR

C-414 takes a distorted input signal, reconstructs it and transmits this now distortion free signal. Timing is crystal controlled thereby virtually eliminating speed distortion of the regenerated signal. **$140.00**

FEATURES:

- Solid state
- Crystal controlled time base
- Code selection 2 to 13 bits
- Less than 2% distortion output at 500 Baud
- Synchronous or Asynchronous operation
- False start protection
- Input distortion can approach 50%

* Teletype Corp.

C-421 — CLUTCH POLL SYSTEM.

A unique polling system for controlling two or more transmitter clutches for a single transmission line. The C-421 polls each station in sequence and allows transmission to take place in sequence. A modular expandable building block allows for an unlimited number of transmitter stations to be utilized. **$700.00**

FEATURES:

- Utilizes solid state control circuits with Reed relay outputs
- Small in size. Each module for two stations is 2.6" x 5.5" x 0.5"
- Clutch control for up to 120 VDC
- Automatic restart at position #1

AVAILABLE in the C-400 Series are the following additional systems:

ANALOG DIGITAL DATA SYSTEMS, INC.

830 LINDEN AVENUE • ROCHESTER, N. Y. 14625 • PHONE 716 - 381-2370

DATA ACQUISITION SYSTEMS

DATALOGGING SYSTEMS FROM STOCK UNITS. ASSEMBLED TO CUSTOM REQUIREMENTS

The Dataloggers accept multiple analog signals, from physical transducers, such as thermocouples, strain gauges, and similar devices. These are scanned by a multiplexer and programmer, individually conditioned to the appropriate voltage level; digitized, converted to computer compatible format and recorded.

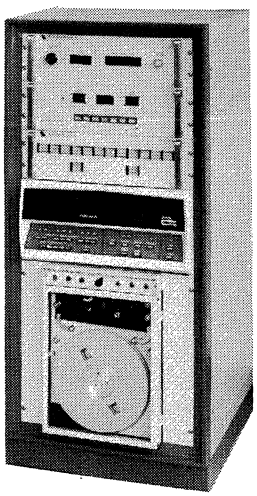
TAPE



SERIES M

This datalogger is available with either 10, 100 or 1000 channel multiplexer capability, digitizing and recording in computer compatible magnetic tape. The tape format can be either straight binary or binary coded decimal, 7 or 9 tracks and 200, 556 or 800 b.p.i. The system speed can be from manual push button to 1000 characters/second asychronous or up to 5000 characters/second in the slew mode.

SERIES P

This datalogger is available as the above, but the output is recorded in computer compatible paper tape, such as ASC11. The system speed is 20 characters/second as standard and up to 120 characters/second as options.

SERIES T

This datalogger is available as the above, but with teletype output. The teletype gives both punched paper tape output in the ASC11 code and also a line printer. The teletype includes a keyboard for manual input data and can be used for computer input. Speed is controlled by the teletype at 10 characters/second.

SERIES K

This datalogger is available as above, but with output onto magnetic tape cassettes. The format is compatible with teletype and the cassettes can be read out onto teletype machine or over a datalink to a shared time computer.

SERIES C

This datalogger is available as above, but controlled from a small computer, which can perform on line computation and read out onto all forms of output devices, such as magnetic tape, paper tape, and teletype. Memory is 4096 words and can be expanded as required.

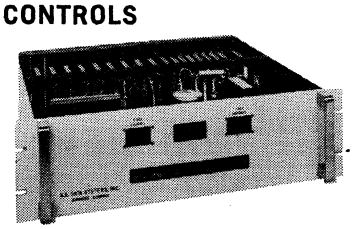
SWITCHING SYSTEMS

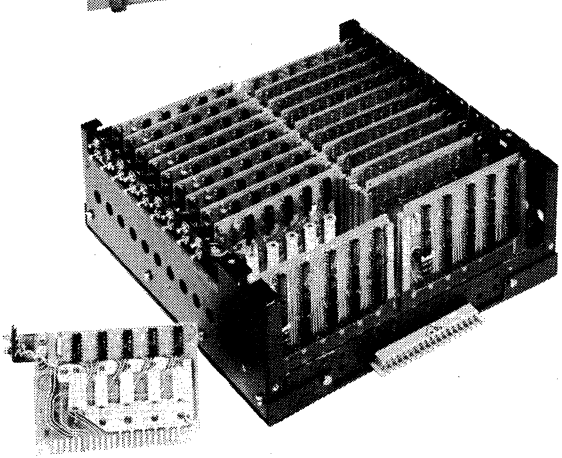
SCANNERS AND MULTIPLEXERS

Where a large number of analog signals are to be measured they can be scanned or multiplexed into one common output device, such as Digital Voltmeter. A.D.D.S. supply a complete range of units, including switches for low level signals, such as thermocouples, 4 wire strain gain, bridge measurements, high frequency coaxial switching, guarded switching and many others from stock and will build to special requirements.

The units are designed with a unique modular construction enabling the basic unit to be expanded in groups of 10 channels by an extensive selection of switching modules.

SCANNER CONTROLS





Model 126 — 100 Channel Control to accept 100 switches of 1, 2, 3 or 4 poles in modules of 10 channels.

Model 127 — 1000 Channel Control to accept 1000 switches of 1, 2, 3 or 4 poles in modules of 10 channels.

Model 501 — 1000 Channel Control to accept 1000 single pole switches in compact modules of 50 channels.

Model 125 — Duo Control to accept 50 channels of analog switches and 50 channels of programming by plug-in pin boards.

Model 082 — 1024 Channel Binary Control to accept 1024 switches of 1, 2, 3 or 4 poles in modules of 8 channels.

REED RELAY MATRICES

For switching multiple path signals, using reed relays for signal switching and TTL compatible logic for controls.

Each path can be selected in nanoseconds from X, Y and select pulses which latch the control logic and the reed relay switch.

The switched path simulates a 50 ohm impedance coaxial line, terminated in 50 ohm connectors to give minimum signal distortion and crosstalk at frequencies exceeding 10 MHz.

Options include electrical readout of crosspoint selected.

TYPICAL APPLICATIONS

Controlled switching in automatic testing of integrated circuits, printed circuit modules, logic modules.

Routing of R.F. signals, telemetry signals.
Programming video signals.
Computer interface to automatic equipment.

Model 056-003 — 10 x 10 x 1 Matrix with Coax signal connectors.

Model 056-103 — 10 x 10 x 1 Matrix with Coax signal connectors and electrical readout of crosspoint selected.

Model 056-006 — 10 x 10 x 2 Matrix.

Model 056-106 — 10 x 10 x 2 Matrix with crosspoint readout.

Model 056-009 — 10 x 10 x 3 Matrix.

Model 056-109 — 10 x 10 x 3 Matrix with crosspoint readout.

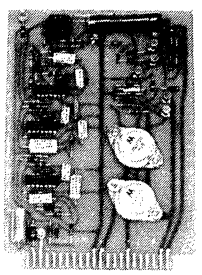
PHASE LOCK AMPLIFIER

COMPANION EQUIPMENT



CARD SIZE

Length	6.5
Width	4.5
Height	0.8 max.
Weight	4.5 oz.

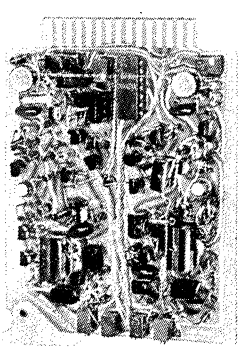
SIGNAL ELECTRONICS ASSEMBLY ULTRA MINIATURE — MODEL SC-1000

Complete 7-track record and reproduce electronics for manned space application. Plug-in combined record/reproduce amplifiers allow any combination of direct, FM or digital recording on any track. Seven channels of record/reproduce is less than 165 cubic inches.

UNIT SIZE

Length	Width	Height	Weight
4.87	3.30	2.03	1.45 lbs.

DUAL RECORD REPRODUCE AMPLIFIER PLUG-IN CARD ASSEMBLIES MODEL DA-110



CARD SIZE

Length	Width	Height	Weight
3.87	2.87	.55	3 oz.

STANDARD PC CARD PLUG-IN RECORD AND REPRODUCE ELECTRONICS FOR INSTRUMENTATION TAPE RECORDER USE

Dual (2-Channel) FM Record Amplifier with Head Drivers

1. 6 speed electrically selectable.
2. Full scale input sensitivity — 1 to 5 volts adjustable.

Dual-Speed FM Reproduce Amplifier

1. Includes 30 db/octave active low pass filters.
2. Either speed electrically selectable.
3. Output — Standard 0 to 5 volts.

Dual (2-Channel) Direct Record Amplifier with Head Drivers

Available per IRIG standards through intermediate band.

Direct Reproduce Amplifier

For use with above record amplifiers.

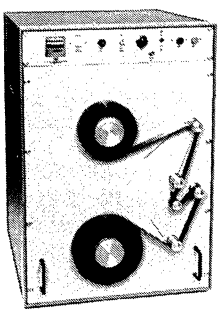
Digital Record Amplifier

Available as single or dual channel, depending on specific requirements.

Digital Reproduce Amplifier

Companion to above record amplifier.

TAPE WINDER — MODEL ATL-900



The AIC Tape Winder has been specifically designed for the purpose of transferring ¼″ or ½″ or 1″ magnetic tape from reel to reel under controlled speed and tension conditions.

Model ATL900 Tape Winder is equipped with two separate DC torque motors and individual servo amplifiers for each motor. Front panel controls are provided to select a wind or rewind mode and allow the tension and speeds to be adjusted independently.

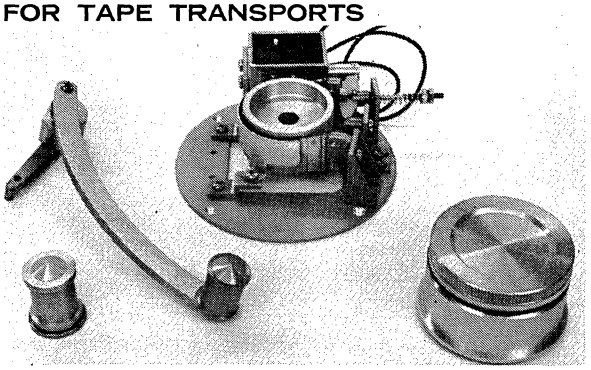
Take-up motor speed control is provided on the front panel to adjust the average wind-rewind speed. The speed range is adjustable from 30 to 120 ips.

Tape Winder is equipped with preset footage counter to automatically wind the precise tape length. Hubs are available for IRIG, IBM and special order requirements. 115V, 50-60 Hz input.

UNIT SIZE

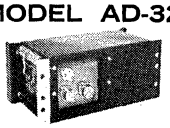
Length	21.67
Width	19.75
Height	20.00

PRECISION ROTARY COMPONENTS FOR TAPE TRANSPORTS



Hubs and brake assemblies for PMI motor, Dupont Kapton® drive belts, precision guide roller asemblies, reel hubs — all standard NAB and IBM sizes available.

POWER SUPPLIES LOW MAGNETIC RADIATION MODEL AD-3220



SIZE (LESS FLANGES)

Length	Width	Height	Weight
7.5	4.0	4.0	8 lbs.

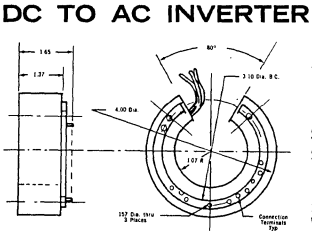
AC TO DC MODULAR POWER SUPPLY

Input:	115/230V, 60 Hz per MIL-STD-761 (Shipboard Power)
Output:	28 Vdc at 6 amperes
Regulation:	±0.5%
Ripple:	Less than 10 mv p-p

Overload Protected

Featuring extremely low magnetic radiation for magnetic recorder applications. Meets shipboard and airborne requirements.

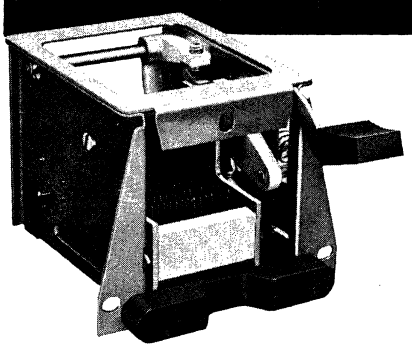
DC TO AC INVERTER — MODEL 2PI-2230



Converts nominal 28 Vdc power to 2-phase square wave AC output. Standard 400 Hz frequency. Multiple frequency electrically selectable capability. Electrically selectable direction capability for motor reversal application.

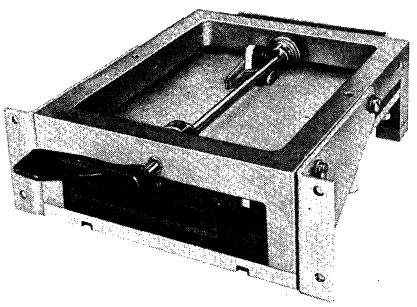
Size O.D. 4.00, I.D. 2.16, H 1.65, Wt., 5 oz.

AMP gives you the and Data Entry



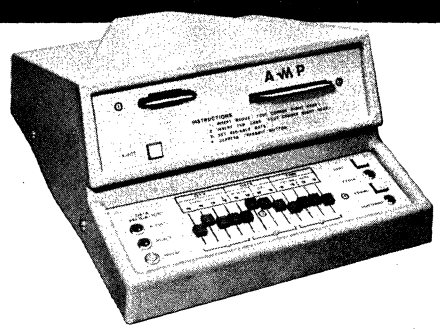
BADGE-READER (61/161/261)

- low cost matrix badge card reader
- small size makes it especially adaptable to applications with limited space
- reads 10 columns of a 15-column card, 15 columns of a 20-column card or 17 columns of a 22-column card
- available cross matrix for numeric data, matrix alpha-numeric, or telephone dial code



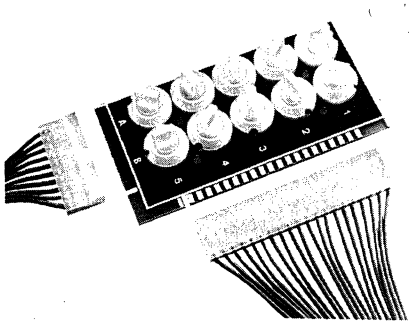
TAB-CARD READER (Model 2981)

- reads punched holes in standard tabulating card
- small-panel space, low height
- bussed-column, matrix and diode isolated specials available
- motor-operated and 22-column versions also standard
- reliable wipe and back wipe contact operation



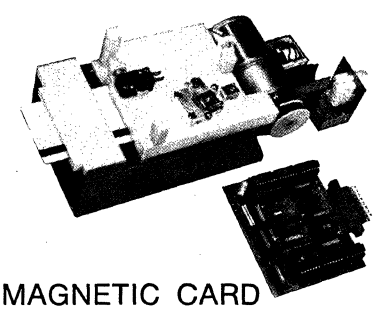
DATA COLLECTION TERMINAL

- enters data from badge, tab card, slide switch and semi-fixed information
- applications such as job cost control, inventory control and library systems
- simplified for optimum man-machine interface
- ASCI-II or teletype interface for plug-to-plug compatibility



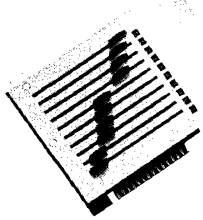
MATRIX ROTARY SWITCH

- direct visual display
- positive detent action
- wide selection of sizes
- economy achieved by integral interwiring



MAGNETIC CARD READER

- uses standard ATA/IATA credit card, other versions on request
- high data density, tested to 1000 flux changes per inch, IATA is 440 flux changes per inch
- low voltage operation, 12 volt DC motor
- same head can be used to either read or write data

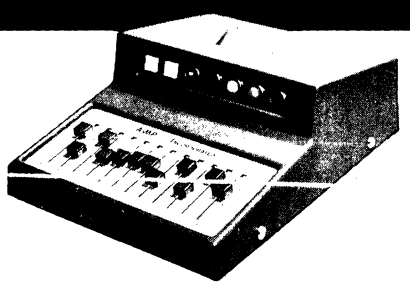


MATRIX SLIDE SWITCH (With visual display.)

- standard sizes—5-slide by 10-positions, also 5 x 16, 10 x 10 and 10 x 16. Special sizes available on request
- positive detent positioning
- small, compact—takes up minimal space
- ⅛″ high characters

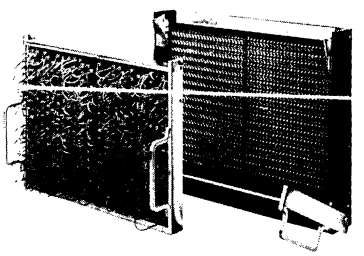
most in Programming Devices

. . . Everything you need for computer input, process control, machine control, test programming, production control, status indication and access control.



INQUIRY TERMINAL

- used to enter variable data, and semi-fixed data; three responses displayed
- automatically dials computer and displays responses
- applications—credit validation, check cashing, stock status
- low cost touch tone interface uses dial-up type direct access arrangement

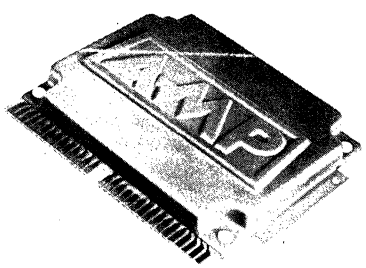


STANDARD PATCHCORD PROGRAMMING SYSTEMS

- choice of sizes—240, 480, 816, 1224, 1632, 1768, 3264 and 4896 holes
- versatile rear bay wiring
- post patch capability
- double wiping action for reliability
- variety of patchcords and accessories

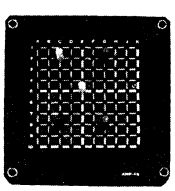
COAXIAL PATCHCORD PROGRAMMING SYSTEMS

- .375 x .270 spacing
- three standard sizes—506, 1012 and 2024
- low crosstalk—60db to 100 MHz
- individual coaxial contacts



ELECTRO-MECHANICAL SCANNER (Model 1522)

- low-cost, simple operation scanner for serializing data
- scans 15, 18, or 22 columns of data in same unit
- low radiated and conducted noise due to new drive design
- self-cleaning contacts



PINBOARDS

- available in many standard sizes. Special designs on request
- low cost color coded shorting pins
- machine applied terminations
- silk screened or engraved to customer requirements
- diode pins available

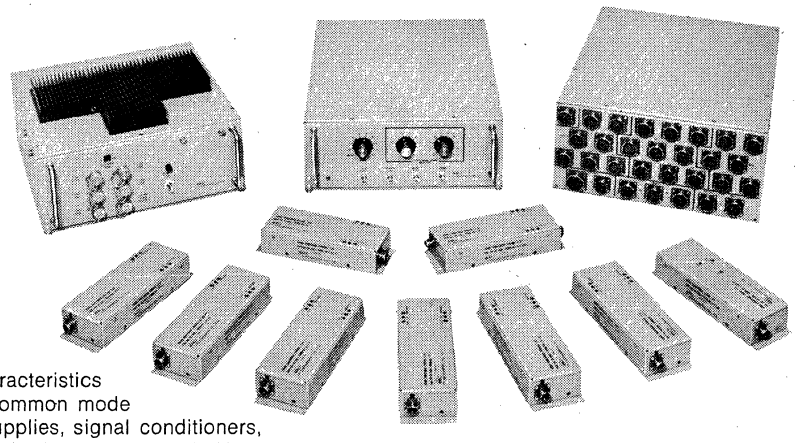
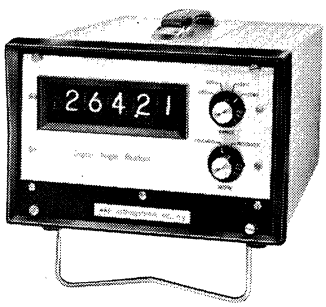
Analog to Digital Converters

Multiplexed Analog to Digital Conversion System



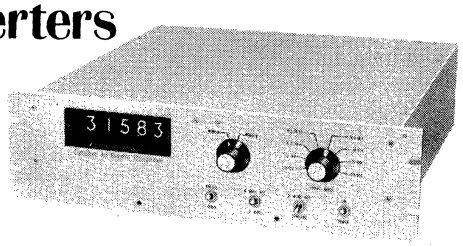
Astrosystems solid state Multiplexed Conversion System is a 50 channel data acquisition system which converts synchro and linear AC inputs to a serial PCM output for data recording and/or telemetering. The basic unit provides a resolution and accuracy of 15 binary bits (.003%). Signal conditioning modules are provided for all inputs, with typical characteristics of 13 megohms input impedance and 80 db common mode rejection. The basic system includes power supplies, signal conditioners, multiplexer, converter and PCM code conversion. Write for Data File No. 109.

Digital Angle Readout



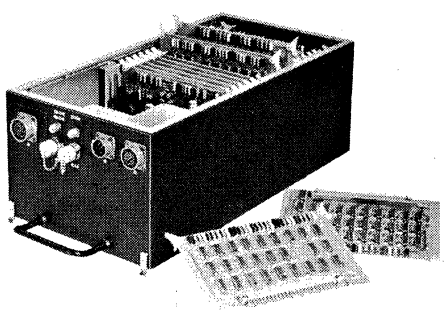
Astrosystems Digital Angle Readout is a simple, reliable and accurate device for converting synchro and resolver input angles to a direct in-line decimal display and electrical digital format. Guaranteed accuracy is 0.01° *peak* error from all causes. The standard model accepts either synchro or resolver inputs at 11.8, 26 or 90 volts line-to-line. Both the visual and electrical outputs continuously track the synchro input. Write for Data File No. 110.

Synchro to Digital Converters



Astrosystems high accuracy Synchro to Digital Converters convert angle inputs from synchros to an equivalent binary or BCD output. Resolutions from 12 to 18 binary bits are available. Accuracy is ±1 bit total peak error including digitizing errors. Converter operation is ratiometric using toroidal transformers which make the units insensitive to transformation ratio and phase shift variations as well as harmonic distortion and noise. Write for Data File No. 101.

Multiplexed Synchro to Digital Converters



Multiplexed Synchro to Digital Converters feature a high accuracy ultra-reliable method of converting multiple synchro and resolver inputs to parallel or serial digital outputs. The converters are completely solid state and have a basic accuracy of 16 binary bits (20 seconds of arc). The units are insensitive to wide variations in input voltage and frequency. Write for Data File No. 109.

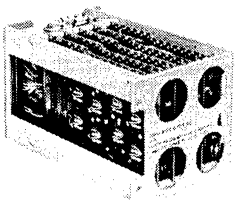
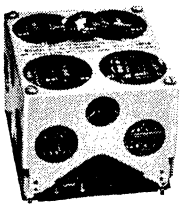
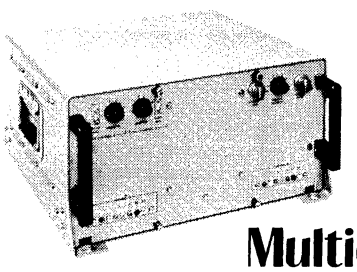
Digital to Analog Converters

Airborne Digital to Analog Converters

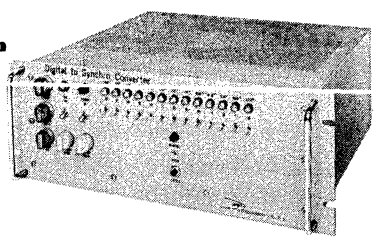




Airborne solid state Digital to Analog Converters feature high reliability, high density packaging and low power consumption. Units are available to provide synchro, resolver or AC output signals to a resolution and accuracy of 16 binary bits. A full range of standard card and circuit designs are available to enable quick delivery of special units. Converters meet the requirements of MIL-E-5400 for airborne equipment. Write for Data File No. 103.



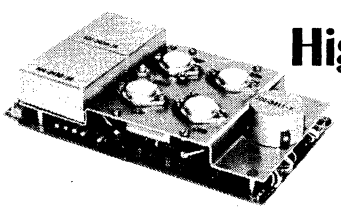
High Power Digital to Synchro Converter



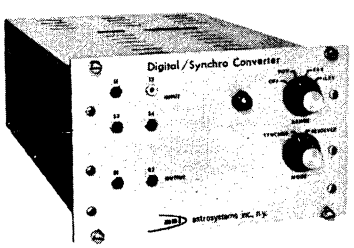
A high powered unit with an output capacity of 3 amperes/leg, this converter is capable of driving 12 size 23 torque receivers on a continuous basis. It converts a 13-bit digital input word into a 3-wire synchro output, performing a minimum of 120 conversions per second. Ruggedized, all solid state construction provides maximum reliability by eliminating all rotating components and associated gearing. Write for Data File No. 128.

Multichannel Digital to Analog Converters

Multichannel solid state Digital to Analog Converters provide AC and/or DC voltage output signals proportionate to a digital input. Units feature 15 bits resolution and accuracy. The DC as well as the AC outputs are floating and completely isolated from each other as well as from the digital inputs. Standard interfaces are available to match most computer and peripheral equipment interfaces.
Write for Data File No. 102.



High Power Digital to Synchro Converter on-a-Card



A unique, one-card package capable of driving high levels, such as torque receivers, in parallel, with 12-bit resolution. Accepts 12-bit binary information and converts to 3-wire synchro information. Smaller, lighter and less expensive than equivalent conventional units, it can be mounted into existing systems without special interfaces. Write for Data File No. 126.

Digital to Synchro Converters

Digital to Synchro Converters accept and register digital angles in binary or BCD code and convert these inputs to an equivalent synchro or resolver output. Standard models are available to operate as synchro transmitters (CX) or synchro control transformers (CT). Accuracy and resolution to 18 bits is obtained through the use of tapped high precision toroidal transformers to derive the required output voltages. Write for Data File No. 102.

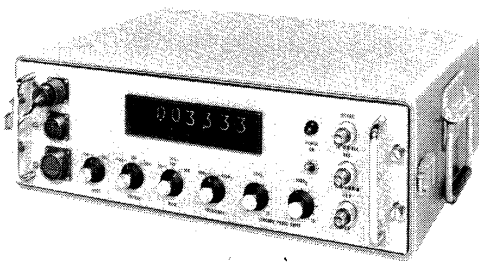
astrosystems

Special Purpose Converters

Digital Angle Indicator

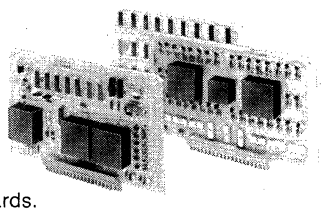
A solid state all electronic device for measuring and displaying angle inputs from remote synchro or resolver inputs. Large inch-high characters on NIXIE* tube readout provide higher visibility and readability than servo drum dials. Accepts synchro or resolver inputs at 11.8, 26 or 90 volts line-to-line. Four decade BCD digital output is available for driving off-line equipment without adding decoder. Write for Data File No. 115.

Multispeed Converters



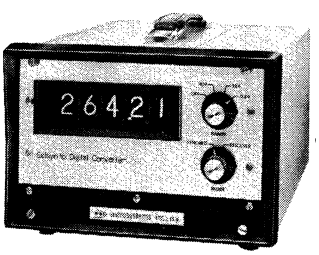
Ruggedized, portable, all solid state units that convert multi-speed or single speed synchro or resolver inputs into six-digit decimal visual displays and BCD (8-4-2-1) electrical outputs. Accept 1x, 36x or 1x and 36x inputs. Accuracy and resolution to 001° Voltage inputs 11.8 volts, 26 volt or 90 volt line-to-line. All synchro conversions performed on ratiometric basis using high precision tapped toroidal transformers as the basic measuring element. Write for Data File No. 201.

Commercial Units

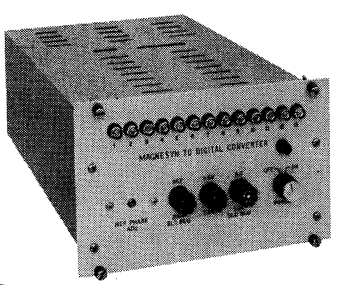


These miniaturized, light weight, high accuracy solid state converters on cards, both Synchro-to-Digital and Digital-to-Synchro, are contained on standard 5 x 8 inch printed circuit cards. Considerably smaller, less expensive and lighter in weight than equivalent conventional units, they fit into standard mounting racks and can be incorporated into existing systems without special interfaces. Ideally suited for incorporation into large process control and computer command systems.
Write for Data File Nos. 125 and 126.

Selsyn to Digital Converter



The Selsyn to Digital Converter accepts 3-wire selsyn inputs at 11.8, 26 or 90 volts and converts them to a digital output. Single speed accuracies available range from 1.° to .001° in order-of-magnitude steps. It is available as a case-mounted unit, a standard ½ rack unit, or on standard cards for integration into existing systems.
Write for Data File No. 110.



Magnesyn to Digital Converter

The Magnesyn to Digital Converter converts magnesyn inputs representing rotary motion into a 12-bit digital output on a continuous non-return-to-zero basis. Conversion is performed utilizing precision tapped toroidal transformers as the basic measuring element of the system. An equivalent servo loop is used where initial coincidence between the analog input angle and the digital output occurs when an AC signal is nulled. Write for Data File No. 129.

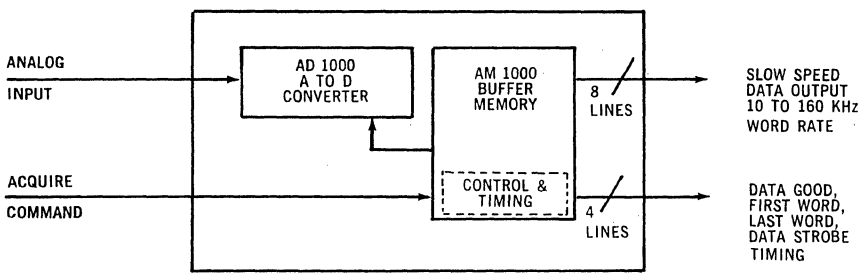
HIGH SPEED DATA ACQUISITION SYSTEM



The Data Acquisition System consists of an AD 1000-6, 7, or 8 Analog-to-Digital Converter and an AM 1000-8 Buffer Memory of selected capacity. They are supplied as a factory interfaced combination.

AM 1000-8 BUFFER MEMORY

The American Astrionics AM 1000-8 High Speed Buffer Memory provides MOS-LSI storage for high word rate data — such as the output from the AD 1000 A/D converter. The memory accepts 8-bit words and stores them as a data block. The stored data is then recirculated at a slower rate, available for transfer to peripheral storage or processing.

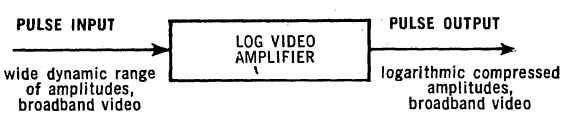
SPECIFICATIONS

Input Word Rate .....10 MHz
Input Data Lines .....8 individual lines
Output Word Rate .....10 KHz; 20 KHz; 40 KHz; 80 KHz; or 160 KHz output rates are available as standard items. Other rates are optional.
Bits per Word .....8 bits
Temperature Range ....0 to 50°C
Interfaces .....All TTL

Contact factory for other combinations of speed/capacity.

LOGARITHMIC VIDEO AMPLIFIERS

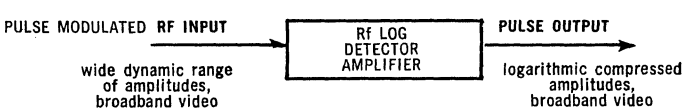
AL SERIES (UNIPOLAR)
ABL SERIES (BIPOLAR)



Dynamic Range .....Up to 80 db
Video Bandwidth ....Up to 144 MHz
Log Linearity .....±1 db to ±1.5 db to a true log curve over temp. Special linearity optional
Tracking .....Multiple unit tracking to ±½ db
Small size—Mil temperature operation—low power.

RF LOG DETECTOR AMPLIFIERS

ADL SERIES



From Rf to log video in one small package

Input Rf Pass Bands .....Octave and Multi-Octave
Rf Dynamic Range .....Up to 50 db
Video Bandwidth .....Up to 70 MHz
Log Linearity .....±1.5 db over temp. Special linearity optional

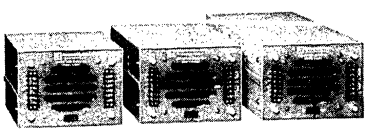
PRECISION CRT DISPLAYS and DISPLAY SYSTEM MODULES

PRECISION X-Y CRT DISPLAYS FOR FILM RECORDING AND FILM READING

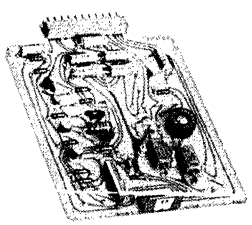
	PD900	PD950	PD1200	PD1400
CRT Diameter	5 inches	5 inches	5 inches	7 inches
Resolvable Elements/Diameter	1700	2100	3400	6300
Maximum Spot Size	0.0025	0.002	0.00125	0.001
Settling Time	10 usec	10 usec	20 usec	20 usec
Small Signal Bandwidth	1 mhz	1 mhz	1 mhz	1 mhz

±35 VOLT DEFLECTION AMPLIFIERS



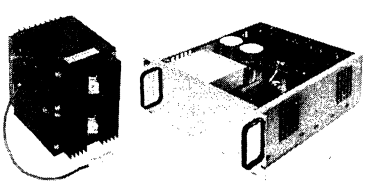
The models DA223, DA224 and DA225 are dc-coupled, all-silicon, solid-state modular packages capable of supplying up to ±2.0, ±4.0 and ±6.0 amperes of deflection current respectiveiy to each axis of a directly-coupled deflection yoke. A unique method of damping optimizes the amplifier for the particular yoke being used by means of an adjustable potentiometer. The amplifiers also feature extremely fast settling time and high bandwidth. The user has the choice of operating the amplifiers Class A for achieving nonlinearities of ±0.02% maximum or Class AB for minimum power consumption.

MODULAR CRT BUILDING BLOCK COMPONENTS



Individual, compatible plug-in circuits such as: DF2050 Dynamic Focus Generator; DF347 Dynamic Focus Amplifier; LC2656/2676 Precision Linearity Correction Circuit; VA2076 Video Amplifier (10 mhz); VA2075 Gamma-Corrected Video Amplifier (10 mhz); VA2077 Video Amplifier (30 mhz); SG1190 Sawtooth Generator; PP529 Phosphor Protection Circuit; DA341 Deflection Amplifier (±200 ma); DA1340 Deflection Amplifier (±0.75 amperes); EDA800 Electrostatic Deflection Amplifier (350 volts plate-to-plate positive or negative); EDA1504 Electrostatic Deflection Amplifier (500 volts plate-to-plate positive or negative); FR1882 Static Focus Regulator; BA1714 Blanking Amplifier. All Beta circuitry features silicon semiconductors and temperature stable metal-film resistors throughout.

HIGH & LOW VOLTAGE CRT POWER SUPPLIES



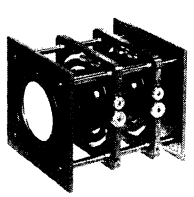
SERIES HV provides regulated high voltage outputs for CRT electrodes — anode, focus grid, G2 and filament.

Model No.	Anode Output Range
HV7	2-7 kv
HV25	10-25 kv

SERIES PAK provides regulated low voltage outputs for Beta modules — ±35 volts, ±20 volts, G1 and filament.

Model No.	±35 volt (deflection) Output
PAK16	16 amperes

PRECISION TUBE AND COIL MOUNTS



Flexible combinations of standard assemblies for the precision mounting and alignment of CRT's, yokes and coils: CRTM Basic CRT Mount includes removable bezel, rods and neck end clamps; DSTM Dual Gun Recording Storage Tube Mount, includes rods and neck clamps both ends; MCM Micropositioner Coil Mount allows 6 independent motions and positive lock; FYM Fixed Yoke Mount for application where micropositioning is not required; FYMS Fixed Yoke Mount for servo-type mounted yokes; CCM Centering and/or Alignment Coil Mount; MS983 Magnetic Shield Enclosure.

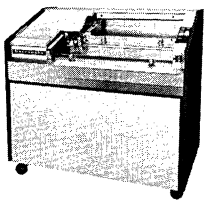
Burroughs

Computer System Components

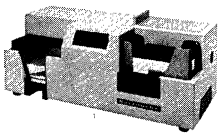
PUNCHED CARD READER

This reliable, high speed Burroughs reader handles short cards as well as standard 80-column cards. Features photoelectric reading and positive strobing of each card column. The unit shown reads 1400 cards per minute. 475 and 800 cpm models are also available.



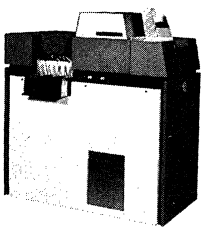
LOW-COST CARD READER

Operates at 300 cpm flow mode and 200 demand mode. Same reliable photoelectric reading principle as higher speed units. It reads standard 80-column cards with strobe output for each card column.



CARD PUNCH

300 card per minute punch features magnetic core buffer, solid-state echo check punching verification, low maintenance. The unit may be loaded or unloaded while operating; can idle indefinitely without card damage. 3 program-selected stackers.

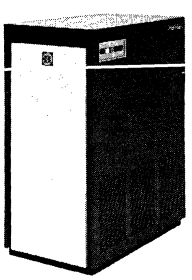


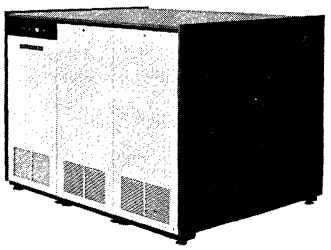
DATA COLLECTION & INQUIRY TERMINALS

Burroughs low-cost TU Series have a 10-key numeric keyboard, 4 function keys, 3 data communications control keys, and a 48-character alphanumeric printer that operates at a speed of 15 characters per second. Printing is done on a continuous paper strip or individual unit documents. Units operate at 150 bits per second over switched, leased or direct line connections. Other models available with a punched card reader capable of reading standard 20-80-column cards, 22-column plastic badges, and 15-column plastic credit cards at 15 characters per second.

SYSTEMS MEMORY DISK FILE

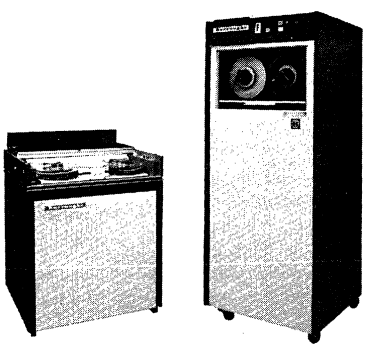
High speed, magnetic disk files used for systems software, users' programs, and general data storage. A Systems Memory module has a capacity of 16 million bits. They feature one fixed read/write head per track of information on the disk face. Average access time is 17 milliseconds and average data transfer rate is about 300,000 bytes per second.





HEAD-PER-TRACK DISK FILES

Very high speed, large capacity, on-line information storage and retrieval systems that provide outstanding flexibility, programing ease, and reliability. Each track of each disk surface has an individual, fixed read/write head operated by full electronic switching. Models are available with a 320 million bit capacity at 35 ms average access time, and a 240 million bit capacity at 20 ms average access time. Average data transfer rates can exceed 4 million bits per second.



MAGNETIC TAPE TRANSPORTS AND CLUSTERS

Free-standing Units. Several models are offered to meet various tape speed requirements. Bi-directional units operate up to 120 inches per second. All models feature gentle tape handling, end-of-tape sensing, fast start/stop, remote and local control, easy threading, and dust-free operation. Packing densities up to 800 bits per inch; transfer rates up to 72 KC per second.

4-Station "Cluster" Units. Unique Burroughs design permits four tape drives to share common electronics and cabinetry. Compact, economical, and easy to use. Uses 7 or 9 channel tapes or both. Packing densities up to 1600 bits per inch; transfer rates up to 36 KC per second.

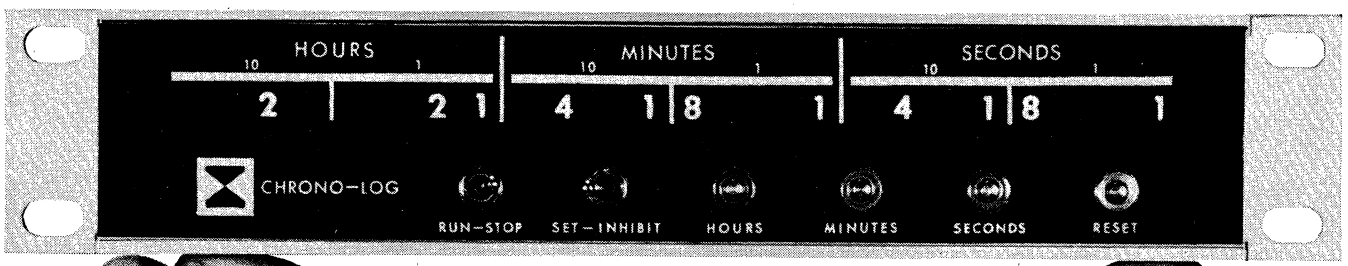
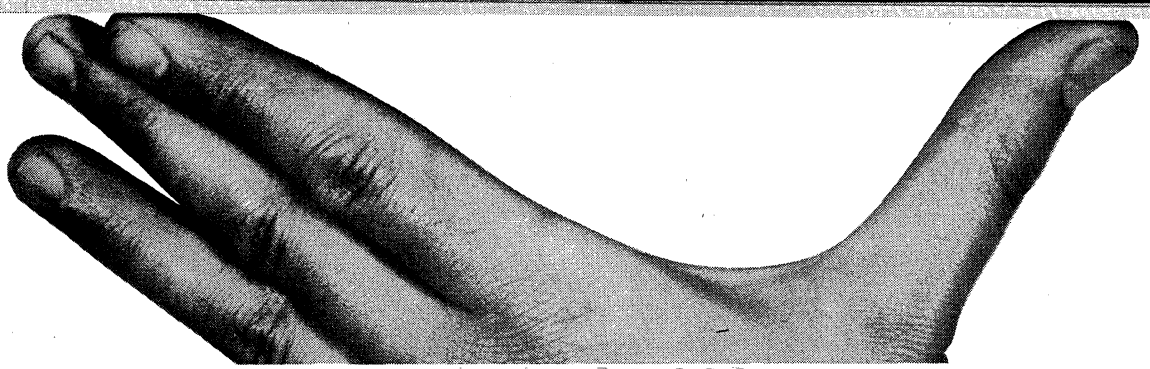
TIME CODE EQUIPMENT...

Look to Chrono-log





Series 30,000

INTEGRATED CIRCUIT CLOCK/CALENDARS

Meet specific system needs at off-the-shelf prices

Applications
Wherever a digital output of real or elapsed time is required such as data logging, data transmission, data processing, time display, telemetry and digital printout systems.

Versatility, at low cost
Over 7,000 standard configurations available to meet specific system requirements at off-the-shelf prices which are less than the prices of electromechanical clocks. Use of common interface wiring and logic levels save you the costs of making engineering and documentation changes from one application to the next. Options include:

- BCD or NIXIE-type front panel displays
- Outputs of hours, minutes and seconds or other time ranges
- Day-of-the-year or month-and-day calendars
- Parallel and/or serial outputs
- Commercial or military temperature ranges
- A variety of internal or external time bases
- Various power supply inputs

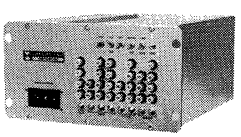
System compatibility
Use of TTL monolithic units, DTL and TTL circuits provide the optimum characteristics for clock applications, permitting simple interface with the most popular integrated circuit families. Chrono-log clock circuits are extremely reliable and provide excellent noise immunity.

Small size
Measures only 1¾ in. high, 9½ in. wide (half rack), and 8¾ in. deep.

For complete details request Bulletin 30,000.

OTHER CHRONO-LOG TIME CODE EQUIPMENT:

Time Code Generators—for recording, telemetry, range timing and other real time systems using IRIG, NASA, Vela or other time code formats. Both parallel outputs and serial modulated carrier outputs are provided for analog magnetic tape recording systems. Ask for Bulletin 4,000.



Low Power Time Code Generators—for field and airborne systems. Operate up to 60 hours from internal standby batteries. Internal oscillator has stability of 2 parts in 10^9 per day. Ask for Bulletin 26,000.

Time Code Readers—accept serial time code input in forward or reverse direction, fast or slow speed. Available for a variety of time codes or in universal multi-code models. Displays time reading and produces parallel and serial outputs of time for data processors, graphic recorders and other data devices. Ask for Bulletin 5,000.

Automatic Tape Search Control—controls tape drive to search for data at high speed and play back selected portions of recording. Provides front panel selection of start and stop times. Eliminates manual searching and playback. Ask for Bulletin 8,000.

Whatever your requirements for time code equipment, look to Chrono-log to fulfill them. For more information, contact your local Chrono-log field engineer or write us directly.

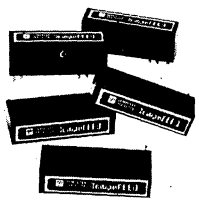
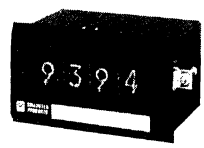
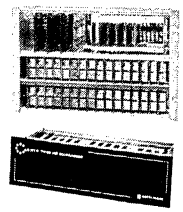
Displays & Counters



CompuREED™



Digital Panel Meters



Real-Time Peripherals

DISPLAYS AND COUNTERS

From custom engineered up/down counters to standard off-the-shelf decimal display modules, Computer Products offers counting and display equipment to meet your requirements. The DM500 and 600 Series are self-contained plug-in decimal display modules using either gas-discharge or 7 segment type indicator tubes. All have combinations of decoder/drivers, decade counters or storage registers. BEZELS AND MOUNTING CHASSIS AVAILABLE. Single quantity prices for DM500 and 600 Series as low as **$25.90 per decade.** Custom engineered up/down counter systems quoted on request

CompuREED™ RELAYS AND SCANNERS

The CR300 Series Relays are the newest development in low-level analog switching. The series includes 12 models available in one, two or three pole, form "A", switching configurations with dry or mercury-wetted switches. The RTP7480 REED Scanner operates at rates up to 200 SPS and uses the CR300 reeds to provide economical high-accuracy sampling of analog signals in the f.s. ranges of ±5 millivolts to ±10 volts with programmable gain control. The reed switches provide extremely low (<0.1 microvolt) thermal offset. CR300 Series prices are typically **$14.00.** A typical price for RTP7480 Scanner is **$40.00/channel.**

DIGITAL PANEL METERS

The DP400 Series measures DC voltage accurately (.05% ±½ count for 2000 and 4000 count models. .02% ±1 count for 10,000 count models) with up to 10,000 count resolution. It offers 11 voltage ranges (200mV, 400mV, 1V, 2V, 4V, 10V, 20V, 40V, 100V, 200V, and 400V). Temp. coefficient is .005%/°F(2000 and 4000) and .003%/°F(10,000). Single quantity prices start as low as **$189.00. Guaranteed shipment within 15 to 30 days.**

REAL-TIME PERIPHERALS

The RTP7400 Series offers the only standard product approach to real-time systems implementation available. These off-the-shelf products include: Low-Level Analog Input Systems (Solid state and REED), High-Level Analog Input Systems, D/A Analog Output Systems, Sample and Hold Analog Output Systems, Digital I/O's and Operator I/O's. ALL RTP7400 products are plug-in compatible with ALL the popular MINI COMPUTERS. The customer selects the computer of his choice. Extremely competitive prices plus dollar volume discounts offered. Let us configure your system with RTP.

D-TO-A CONVERTERS

The DA035 Series provides 8, 10 or 12-bit binary or 12-bit BCD resolution, with or without input data storage, on a P.C. card measuring 2.75" by 5.25". Inputs are TTL/DTL compatible. There are 40 models with six full-scale analog output ranges up to ±10 volts and ±10ma available. Settling time from 10 to 50 microseconds. Incremental conversion rates up to 200KHz. Accuracy ±0.05%, ±½LSB. Single quantity prices as low as **$69.00.**

A-TO-D CONVERTERS

The AD300 Series offers 14 standard models providing binary or BCD output code with 8, 10 or 12-bit binary resolution or 12-bit BCD resolution. Bipolar, input of +4V to −4V or +10V to −10V are standard input configurations. 10KC conversion rates are standard, 20KC available. Accuracy is ±0.025%, ±½LSB. The AD 300 Series are mounted on three plug-in P.C. boards measuring 2.75" x 5.25" x 1.0". Single quantity price for 12-bit binary 10KC, only **$189.00.**

CompuLogIC T.M.

The CL800 Series comprises a complete family of plug-in logic circuit modules using monolithic DTL integrated circuits. The series consists of positive logic, NAND based circuits with each circuit card containing two hermetically sealed, 14-pin, dual in-line, ceramic packages. Each circuit module measures only 1.25" x 2.5" and mates with standard 30-pin, 15-position, card-edge connectors with 0.156" spacing. The basic series consists of 18 separate circuit module types containing both high and low-speed models. A typical price for CompuLogIC™ is **$10.00.**

DC POWER SUPPLIES

The PM400, 500, 600 and 700 Series Regulated DC Power Supplies offer output voltages from 3.6 to 180VDC —single and dual. Power up to 15 Watts. The PM500 Series are the famous encapsulated PC mount modules. The PM800 Series are encapsulated Unregulated DC Power Supplies offering output voltages from 5 to 45VDC. 220V/50Hz operation available on all Computer Products power supplies. Mounting sockets available for PM500 and 800 Series. Single quantity prices for PM500 Series as low as **$19.95.**

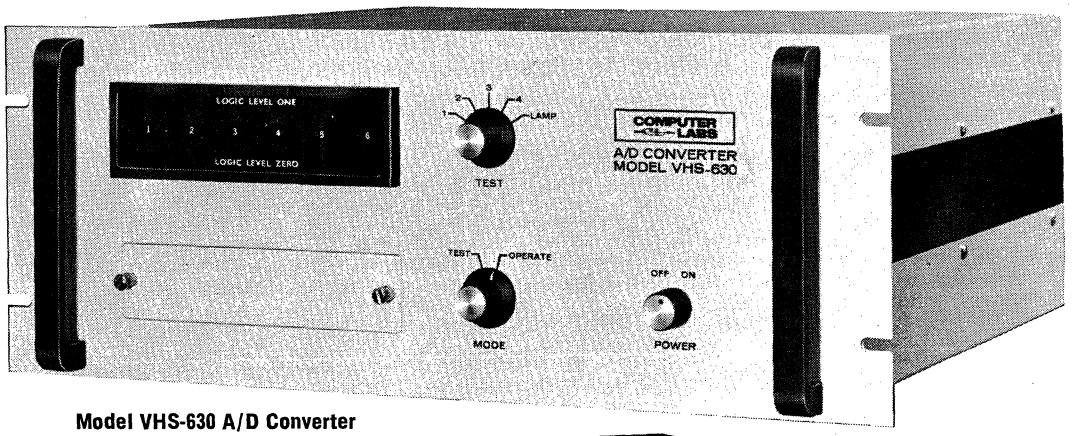
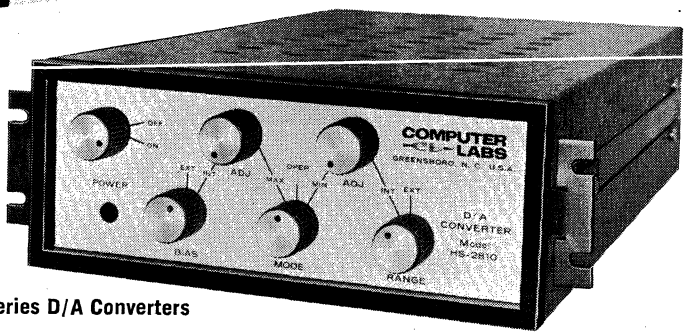
World's fastest

High-Speed Analog Multiplexers



Model VHS-630 A/D Converter

HS Series A/D Converters



HS-2000 Series D/A Converters

data acquisition products

Transient; high-speed; narrow; or "one chance."
It doesn't matter what you call your measurement problem. And it doesn't matter whether your data are radar, color TV, communications, medical measurements, nuclear phenomena, chemical reactions, or any of dozens of others. Data acquisition becomes an important question demanding sophisticated answers.
Computer Labs has those answers in . . .

High Speed Analog Multiplexers

The Computer Labs Model MUX-810 Multiplexer will connect eight analog inputs to a single output at a rate of 6.6 million connections every second. Channels can be connected sequentially, with any number in the sequence; random access; or manually, with a front panel push button. *Equivalent "ON" resistance is 0.2 ohm, making the Model MUX-810 an ideal choice for switching 100-ohm lines.* The $2,400 price includes one-year warranty and manual.

Model VHS-630 A/D Converter

The Model VHS-630 is the answer to those problems requiring medium resolution and extremely high data rates. The unit is capable of six-bit resolution at any random or periodic word rate from dc through 30 MHz. *Aperture time is less than 75 picoseconds;* transient response is 15 nanoseconds; and overvoltage recovery is 30 nanoseconds. The analog input has several no-cost options, and digital data outputs are MECL-compatible. The $13,200 price includes built-in test circuits, a one-year warranty, and complete instruction manual.

HS Series A/D Converters

All Computer Labs HS Series A/D Converters have sample-and-hold, internal test circuits, and power supplies. *No external test equipment required.* Random or periodic word rates available from 4 bits at 6 MHz and 25 MHz through 9 bits at 1 MHz and 5 MHz. Digital output TTL compatible. Unipolar or bipolar input; 50, 75, or 93 ohms impedance; and regular binary or 2's Complement outputs are no-cost options. Prices range from $3,200 (4 bits at 6 MHz) through $9,660 (9 bits at 5 MHz) and include a one-year warranty and manual.

HS-2000 Series D/A Converters

Computer Labs HS-2000 Series D/A Converters convert parallel binary words into analog voltages accurate to within ±2 mv. *No strobe signal required.* Output settles to within 0.1% of input in less than 90 nanoseconds. External bias and reference signals can be applied from dc to 25 MHz, making units useful also as programmable attenuators, function generators, or modulators. The price range of $1,480 (4 bits input at 25 MHz) through $1,760 (9 bits input at 10 MHz) includes a one-year warranty and manual.

And Continuing New Developments . . .

The *LAB 210* (picture unavailable at press time) is a 10-bit, 2MHz A/D. With options, it is *also* a D/A, a 100-word memory, or a transient detector capable of reading the maximum or minimum value of a pulse. Other features include push button ranging; decimal front panel display; built-in test circuits; and both binary and BCD data outputs. Call for more details and a complete spec sheet.

See our OP AMPS in section 1100

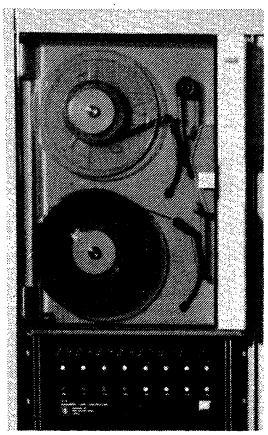
the specialized capabilities of DATACOM, INC.

Industry Compatible
MAGNETIC TAPE PERIPHERALS



Datacom provides Magnetic Tape Systems that are plug compatible with most small and medium computers. Datacom Units include Software, Cables, and Connectors. IBM Compatible Formats are standard.

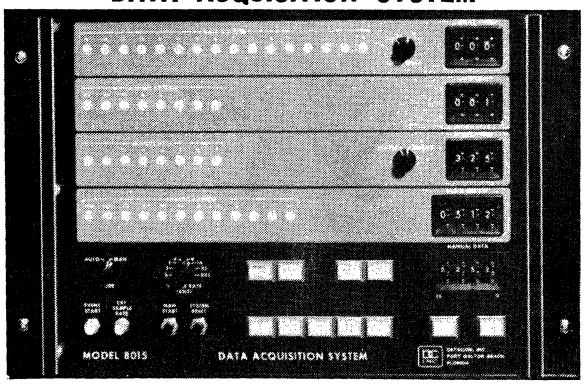
Datacom's Versatile Tape Controller can grow with your need for additional tape units. The basic Controller can control one or two tape drives, either 7 or 9 track. By adding optional cards, the system is expandable to encompass the following features:

- **Controls as many as eight tape drives**
- **Permits mixing of seven and nine track drives**
- **Permits mixing of various tape drive speeds and densities**

DMA Transfers are standard.

Future computer peripherals will include discs and line printers with similar flexibility. Consider Datacom for your peripherals.

Sophisticated DATA ACQUISITION Instruments
MODEL 8015
DATA ACQUISITION SYSTEM



The Model 8015 is a self-contained, versatile instrument with modular design. It offers a wide choice of input and output peripherals.

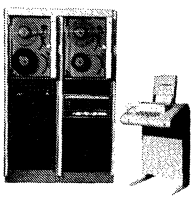
The Model 8015 consists of an analog multiplexer, an analog-to-digital converter, a shared digital input bus, a memory and a number of I/O peripheral interfaces.

It offers the researcher or investigator very high speed sampling rates, over 47 KHz, and extremely high digital through-put rates, over 80 KHz when used with appropriate output magnetic tape recorder. Tape units are available from 10ips to 150ips.

Modular design allows choice of several other peripherals to meet particular requirements.

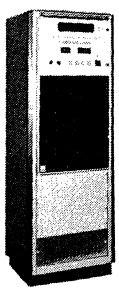
Optional digital multiplex also allows acquisition of digital data.

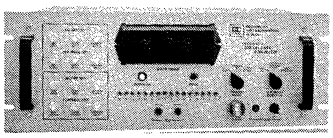
Specialized
DIGITAL DATA SYSTEMS and PRODUCTS



- **MAGNETIC TAPE VERIFIERS** — Datacom can combine its standard products with its computer science capability to provide systems to verify recorded data.

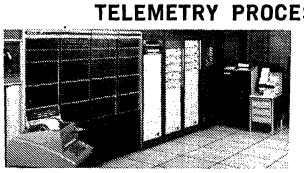
- **RADAR REFLECTION RECORDER**—Designed specifically to automate the data reduction process of target reflectivity and antenna pattern measurements. System is used in combination with standard range pattern measuring systems.





- **DIGITAL SIGNAL PROCESSOR**—The system is used to convert NRZ-C Data to a signal suitable for recording on Analog Instrumentation Recorders. Packing densities in excess of 10 K bits per inch are obtainable.

Expert Digital
SYSTEMS ENGINEERING
capability. Typical Projects Include:
PMC PLAYBACK AND OTHER TELEMETRY PROCESSING STATIONS



Courtesy of U.S. Air Force—
Sponsor: ADTC (A DTVM)
Eglin AFB, Fla. 32542

Datacom combines its products and capabilities to produce sophisticated computer controlled telemetry data processing stations. Data can be recorded or directly enter into major computer centers via Datacom's Inter-Computer-Link.

MAGNETIC TAPE SUBSYSTEMS

Datacom offers complete magnetic tape systems for most small and medium computers. In addition Datacom provides:

- **IRIG timing equipment**
- **Logic modules**
- **Special PC Card manufacture**
- **Process control systems**
- **Special systems**

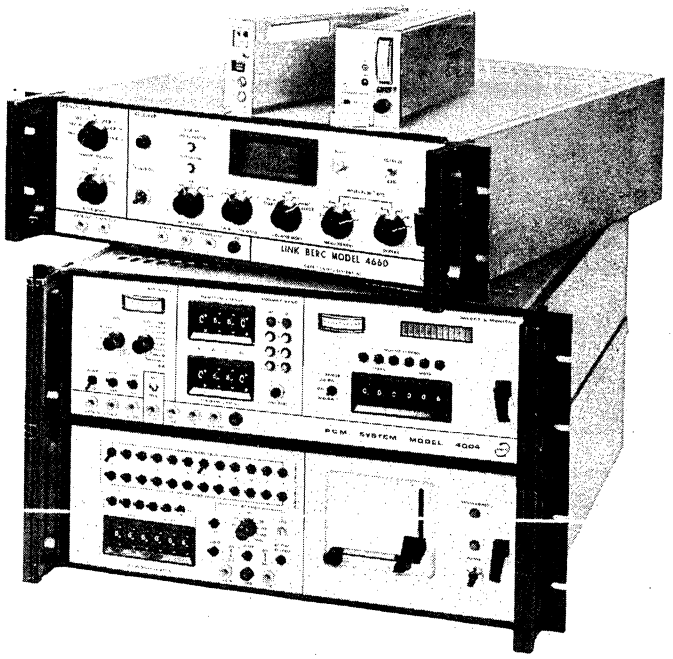
Creative instrumentation and systems for...

data acquisition, data reduction and data communications



For over 13 years, DCS has been the acknowledged leader in the design of instrumentation and systems for data acquisition, reduction and transmission testing. The products described are but a sampling of the range of instruments available from DCS.

Computer Controlled and Manually Operated PCM Decommutation Equipment

Highlighting this line of equipment is the Model 4770 PCM Bit Synchronizer that incorporates the unique data "talk-back" bus developed recently by DCS. The unit is compatible with standard IRIG bit rates as well as the more sophisticated 10 megabit rates encountered in communication networks. The well-known manually operated Model 4004 PCM Decommutator provides a complete decommutation subsystem capability that directly interfaces with a variety of computer processors.

Bit-Error Rate Calculator

The Model 4660 (Link-Bit Error Rate Calculator) provides a new method for testing in seconds digital telemetry and communications links that are made up of synchronizers, modems, magnetic tape recorders, microwave transmitters, receivers, etc. Previously the testing of the performance of digital hardware and systems took minutes and even hours. The Link Berc not only reduces operational cost, but also operates over the widest frequency range of any similar digital test monitoring instrument on the market.

In addition to LINK-BERC DCS offers a full line of Data Communication Modules... these include bit synchronizers, PSK demodulators, DM demodulators, etc.

FM Demodulators

DCS has designed a new family of FM Demodulators that provide high quality and performance to suit a variety of needs. Price and performance are geared to the needs of the industrial and processing fields as well as the highly sophisticated aerospace market. Through extensive use of new solid state and integrated circuit technology, improved performance, smaller size and lower cost are offered compared to modules they replace. The Models GFD-15, GFD-16, and GFD-17 are designed for playback and demodulation of multiplexed and wide-band FM recorded data. The Model GFD-15 incorporates a unique computer addressable data sampling output for stripping data out of an FM signal multiplex under the command of a computer.

Signal Conditioning Modules

Signal Conditioning Instrumentation is generally divided into three groupings . . . FM Encoding Devices; Data Conditioning Modules; and related Calibration Equipment. All of the instruments feature the extensive use of integrated circuits and innovative DCS circuitry to provide new features at lower cost compared to other competitive modules.

FM Encoding . . . Three basic FM Encoding modules are available to suit every requirement. The Model GOV-4 is an inexpensive unit suitable for high-level input applications. A more sophisticated companion unit, the Model GOV-5 finds great utility in applications where medium-to-high voltage levels are present and where the user requires a built-in calibration network. The Model GOM-5 is the ultimate state-of-the-art device and boasts a variable gain amplifier/VCO combination.

Data Conditioning Modules . . . The SCU Series has wide application in the fields of SONAR, Engine Testing, and Vibration Measuring Systems. The units feature extremely quiet preamplifiers, pre-spectral shaping filters, and automatic gain ranging. The filters provide shaping of frequency and phase characteristics to allow the acquisition of psuedo-random data in the presence of noise, test stand resonances, air perturbations, etc.

Calibration Systems . . . Standard IRIG Calibration Sets (the SCF Series) enable rapid checks of all constant and proportional bandwidth channels. Users need only purchase the channels they currently require . . . and expand to a full system as their needs increase. VCO and Discriminator "Auto-Cal" systems are also available for the large data acquisition and reduction installations.

For detailed information on the broad range of instrumentation available at DCS request your catalog Now!

DATOS DATA HANDLING EQUIPMENT *from Data Graphics Corporation*

DATOS 301/302

Data Acquisition/Transfer Systems

- Highly versatile, programmable data traffic control instruments — accepts data from digital instruments, keyboards, etc; format data in EBCDIC, ASCII, EIA, or other code; present data sequentially to recorder or terminal device
- Available with up to 30 digits memory entry, or for time-multiplexed input up to 60 digits
- 200-point program board, includes constant data and remote command channels
- DATOS 301 for output to mechanical switch devices as keypunch, paper tape punch, Flexowriter, teletypewriters, typewriters
- DATOS 302 for output to incremental magnetic tape recorders, phone modems, computer I/O lines, CRT terminals
- Free-standing or rack-mount models available

DATOS 303/304

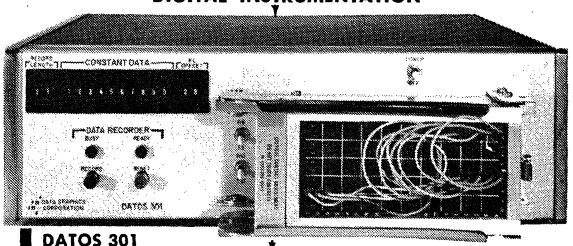
Data Transfer Systems

- Economical, flexible, programmable data transfer units for laboratory or similar applications using medium format lengths and where frequent format changes are not required
- Memory captures up to 30 digits, or time multiplexed input to 36 digits
- 120-pin back panel programmable connector
- DATOS 303 for output to keypunch, paper tape punch, Flexowriter, teletype, etc.
  DATOS 304 for output to phone modems, incremental mag. tape recorders, CRT terminals
- Free-standing or rack-mount models available

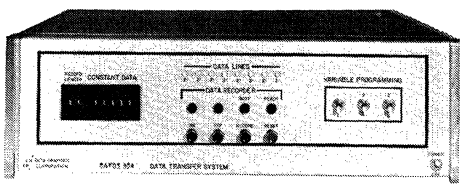
DATOS 305 *Data Coupler*

- Multiplexed input, programmable coupler ideal for repetitive recordings with limited format variations
- Output to keypunch, paper tape punch, teletypewriter, etc.
- Back panel program connector for input up to 20 digits
- Free-standing or half-rack models available

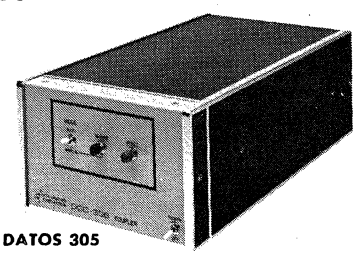
DIGITAL INSTRUMENTATION



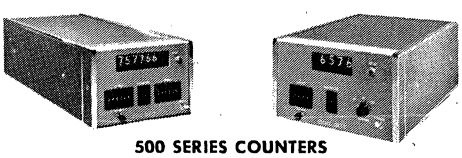
DATOS 301
RECORDING DEVICE OR TIME SHARE RECORDER



DATOS 304



DATOS 305



500 SERIES COUNTERS

BI-DIRECTIONAL COUNTER

DGC-500 Series *Event Counters*

- BCD-output totalizing unidirectional counters for use with DATOS systems, as record counters and/or monitors, clocks, scanner controllers, etc. Nixie display
- DGC-500: 4-digit totalizing counter
- DGC-501: 4-digit counter with 4-digit thumbwheel switch offset control and 1-digit input multiplier
- DGC-502: same as 501 plus independent 2-digit counter, 2-digit offset control, 2-digit preset detector
- DGC-503: 6-digit counter, 6-digit thumbwheel offset control, 6-digit preset detector, 2-digit input multiplier

DGC-100 & 200 Series

Bi-Directional Counters

- Three package configurations, rack mount, mini console, OEM.
- Interfaces to any encoder or pulse source
- Widest range of options available: Offset, Sign, Preset, Variable Resolution, Remote Resolution, Remote Display, Others
- Grid Line Recognition
- Absolute/Incremental Controls

For complete information on specifications, options, interface assistance, pricing and delivery, phone or write:

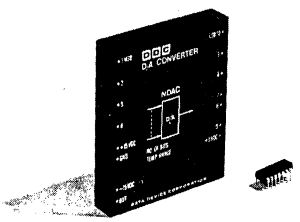
DATA DEVICES from DDC

THESE ARE SOME OF OUR STANDARD DATA CONVERSION PRODUCTS:



SINGLE MODULE CONVERTERS:

DIGITAL-TO-ANALOG

- Resolution to 13 bits
- Accuracies to ±0.012%
- Settling times to 50 nS
- Output currents to 100 mA
- Binary or BCD inputs
- Also multiplying AC and universal reference models

ANALOG-TO-DIGITAL

- Resolution of 11 binary bits or 3 BCD decades + sign
- Accuracies to 0.025%
- Bit rates to 1 bit/μs (Also 8-channel MULTIPLEXER and differential input SAMPLE and HOLD modules)

SYNCHRO/RESOLVER-TO-DIGITAL

- 14 bit resolution
- ±4′ ±0.9 LSB accuracy
- Compatible with most standard synchros and resolvers

DIGITAL-TO-SYNCHRO/RESOLVER

- 14 bit resolution
- ±4′ accuracy
- Compatible with most standard synchros and resolvers

SOLID STATE CONTROL TRANSFORMERS AND CONTROL DIFFERENTIAL TRANSMITTERS

- 14 bit resolution
- ±4.5′ accuracy

MULTI-MODULE CONVERTERS:

VIDEO ANALOG-TO-DIGITAL

- 8 bits
- 6.67 MHz word rate
- 300 pS aperture time
- 10 MΩ input impedance

HIGH SPEED ANALOG-TO-DIGITAL

- 4 bits
- 16 MHz word rate
- 200 pS aperture time
- 10^{11} Ω input impedance

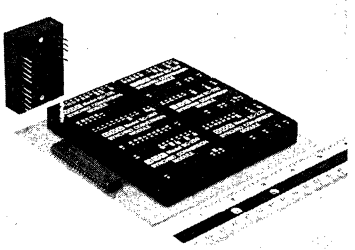
(Also video signal SAMPLE and HOLD and TRACK and HOLD modules)

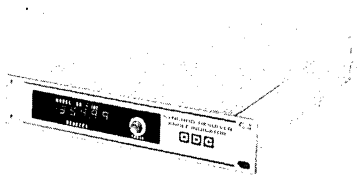
AVIONICS SERIES SYNCHRO/RESOLVER-TO-DIGITAL, DIGITAL-TO-SYNCHRO/RESOLVER

- Resolution to 16 bits
- Accuracies to ±1′
- Compatible with all standard synchros and resolvers

MULTIPLEXED SYNCHRO/RESOLVER-TO-DIGITAL

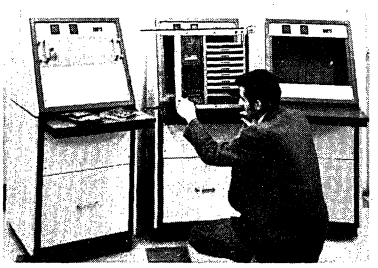
- 13 bit binary or 16 bit BCD resolution
- ±5.3′ binary or ±0.1° BCD accuracy
- 150 μS/channel conversion time
- Accepts all conventional synchros and resolvers





SYNCHRO/RESOLVER ANGLE INDICATORS:

- 5 digit LED display and BCD output
- ±0.03° max. worst case error
- Wideband: 47-1,000 Hz
- All solid state; no drift
- Half-rack wide, 1¾″ high



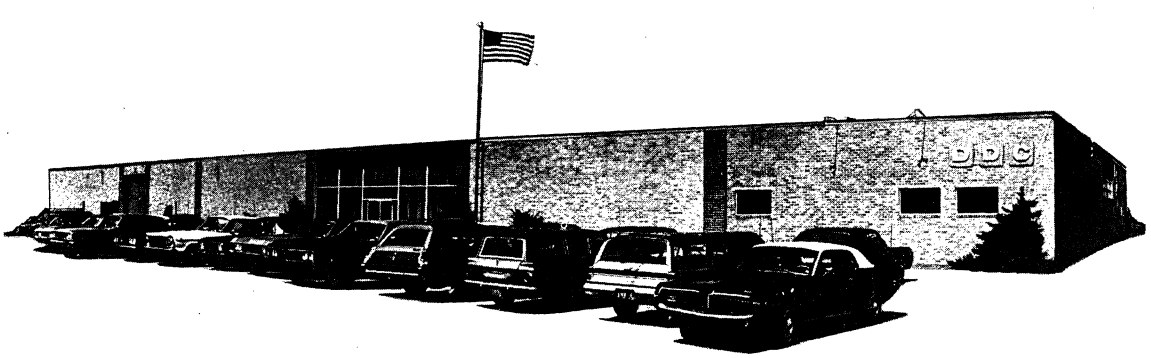
SYSTEMS:

We can fill all of your interface requirements including complete systems. In our large, modern facility, DDC enjoys a unique combination of engineering talent and systems experience.

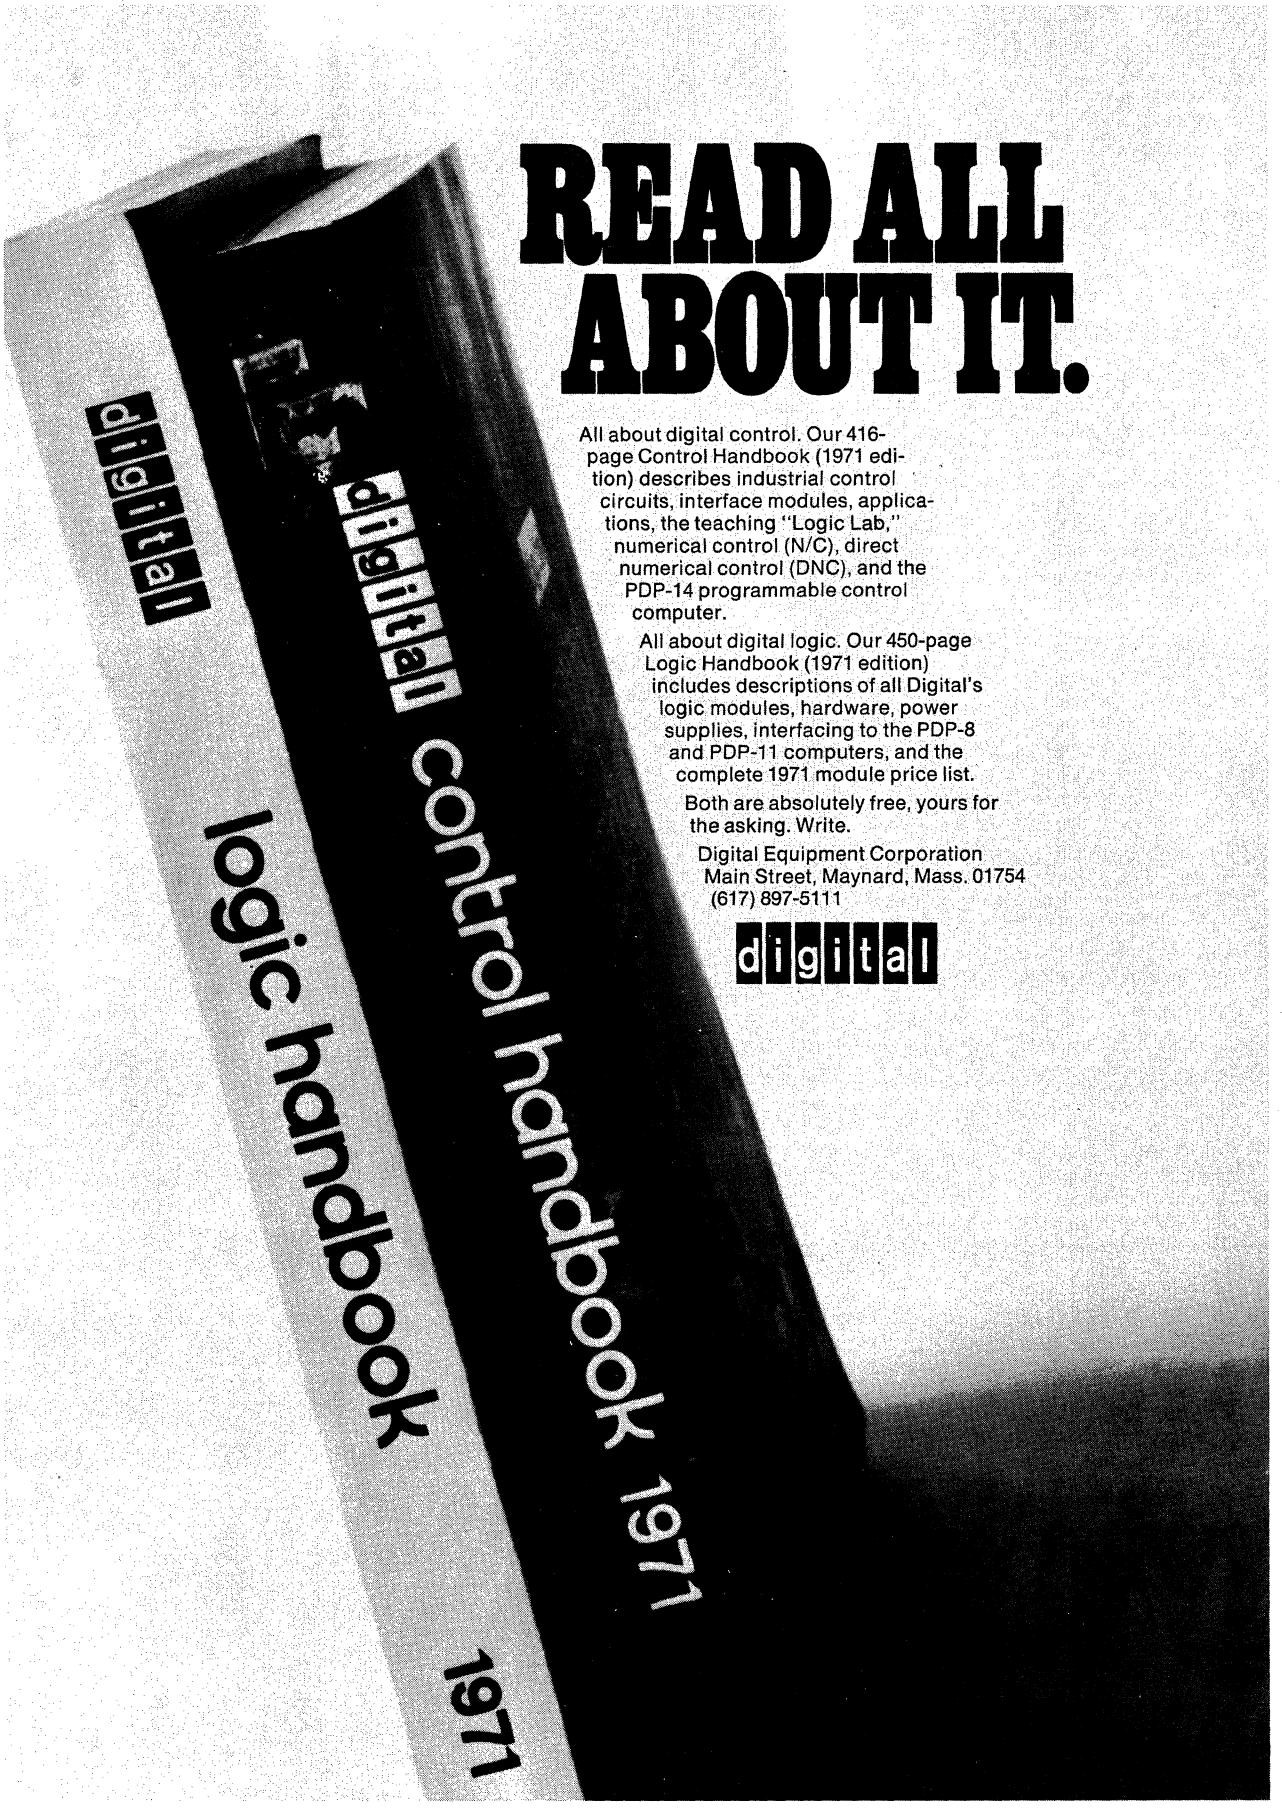
OTHER PRODUCTS:

Our other products include synchro load drivers, high frequency line drivers, discrete and hybrid wideband fast slewing and fast settling amplifiers, ladder networks, and power supplies. ALSO SEE VOLUME II, SECTION 1100.

ALL DDC PRODUCTS ARE AVAILABLE TO MEET MILITARY SPECIFICATIONS



DDC 100 Tec Street, Hicksville, N.Y. 11801 • TWX 510-221-1874 • PHONE 516-433-5330



READ ALL ABOUT IT.

All about digital control. Our 416-page Control Handbook (1971 edition) describes industrial control circuits, interface modules, applications, the teaching "Logic Lab," numerical control (N/C), direct numerical control (DNC), and the PDP-14 programmable control computer.

All about digital logic. Our 450-page Logic Handbook (1971 edition) includes descriptions of all Digital's logic modules, hardware, power supplies, interfacing to the PDP-8 and PDP-11 computers, and the complete 1971 module price list.

Both are absolutely free, yours for the asking. Write.

DIGITAL PRINTERS

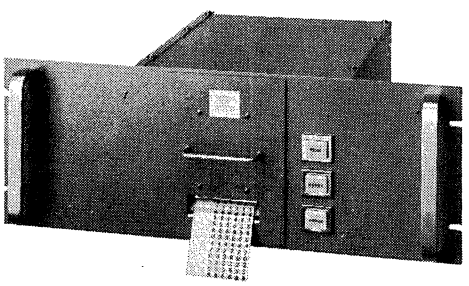
2000 SERIES

• 4 to 20 columns • 60 lines per minute • BCD parallel entry 8421, 4221, or 2421 • Modular construction • All solid state circuitry • Available options include: clock printout, log indexing, floating point, memory, 150 lines per minute

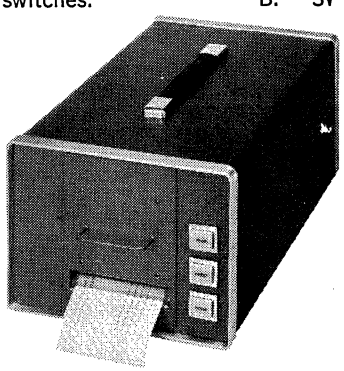
Digitron Printers are specifically designed for the facility requiring a low-cost digital printer for recording from all types of digital instruments and systems. They are complete units with power supply and all electronics, ready for recording.

SPECIFICATIONS

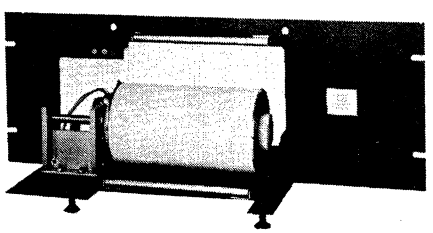
1. PRINT RATE
   Model 2014, 2020 ..... 60 Lines Per Minute
   Model 2014H, 2020H .....150 Lines Per Minute
2. NUMBER OF COLUMNS
   Basic Model 2014, 2014H ..... 4 to 14 Columns
   Basic Model 2020, 2020H .....10 to 20 Columns
3. PAPER
   Length approximately 250'. Model 2014 uses 4" width. Model 2020 uses 6" width.
4. MOUNTING
   Rack Mounting, standard: 7"H x 19"W x 15"D, or Portable case with handle: 7¼"H x 10"W x 16¼"D.
5. POWER
   115 Volts ±10 Volts, 50 to 400 Hz, fused at ½A.slo-blo.
6. FRONT PANEL CONTROLS
   Power-on switch and indicator light; Print switch, Reset switch; Hours advance, minutes advance switches.
7. DATA INPUT (LOGIC LEVELS)
   A. Standard: "1" = +2.4 to +30 VDC; 100K ohms input impedance.
   "0" = +0.4 ±0.4V; 1.5ma sink (std. DTL load).
   B. Alternate: "1" = −3V to −30VDC; 100K ohms input impedance.
   "0" = −0.4 ±0.4V; 100K ohms input impedance.
8. PRINT COMMAND
   A. Contact closure to ground.
   B. −3V to −30VDC (see 7B). Sustain for 1 millisecond.
   C. +3V to +30VDC (see 7A). Sustain for 1 millisecond.
9. CONTROL SIGNAL
   Busy during print cycle: Approx. 0.8 seconds.
   A. +3.5VDC gate during cycle. Normal reference ground.
   B. −3V to −30VDC during cycle. User supplies Ext. Vcc.



RACK MOUNT



PORTABLE



PAPER TAKEUP

3000 SERIES

• 4 to 21 columns • 180 lines per minute • BCD parallel entry • Floating point • Red and black printing • 16 characters per column • Plug-in integrated circuits • 115/230 volts or 12 volt battery operation • Available options include: clock, logging index, inverted logic levels, memory • Printers can be supplied with or without power supply • OEM and special versions available on request

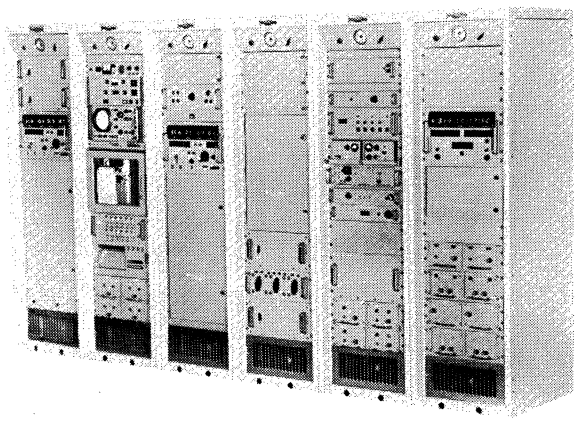
SPECIFICATIONS

1. PRINT RATE
   180 lines per minute.
2. NUMBER OF COLUMNS
   4 to 21 columns.
3. FORMAT
   5 lines per inch vertical spacing.
   7 characters per inch horizontal pitch.
4. PAPER
   3½" wide tape x approximately 250' length; fan-fold and ribbonless printing optional.
5. MOUNTING
   Rack Mounting, standard: 5¼"H x 8½"W x 15"D; or portable case with handle: 5¼"H x 8½"W x 15"D.
6. POWER
   115/230VAC, 48 to 63 Hz, or 12VDC battery.
7. CONSTRUCTION
   Modular, all integrated circuits are socket-mounted, printer is field expandable to 21 columns by adding IC's.
8. FRONT PANEL CONTROLS
   Power-on, Print, and Paper feed.
9. DATA INPUT (LOGIC LEVELS)
   A. Standard: "1" = +2.4V to +5.5VDC, "0" = +0.4V ±0.4V.
   B. Inverted: "0" = +2.4V to +5.5VDC, "1" = +0.4V ±0.4V.
10. PRINT COMMAND
    +2.4V to +5.5VDC, continues to print if level is maintained.

GEO SPACE SYSTEMS, INC.

DIGITAL SYSTEMS AND TIMING EQUIPMENT

COMPLETE TIMING SYSTEMS



APOLLO TIMING SYSTEM

The most sophisticated central timing systems built by Geo Space Systems, Inc. were installed onboard the National Aeronautics and Space Administration's new Apollo instrumentation ships. The system generates time codes and a variety of standard and nonstandard reference frequencies and distributes them to range instrumentation equipment located throughout the ships. It provides time signals that are synchronized within one ten thousandth of a second with the Naval Observatory.

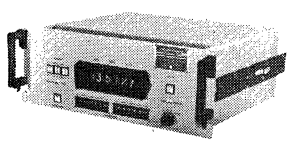
Outputs, derived from precise rubidium and crystal frequency standards by redundant master time-of-year clocks and time signal generators, include standard NASA and IRIG time codes, serial binary time-of-year and time-of-day, serial binary-coded-group time-of-year and paralleled BCD time-of-day. Elapsed time clocks are incorporated for complete pre, or post event timing, and feature manual or automatic initiation. All frequencies and time codes are channelled through a system patch panel for programmable distribution. A time scaler produces time and event markers for use with event recorders and plotting boards.

The system's time comparison equipment includes a WWV receiver, a VLF receiver, chart recorders and an oscilloscope featuring a plug-in unit to make it readily available for use in synchronizing, timing procedures and troubleshooting. VLF doppler effect is corrected by a ships motion compensator.

The utmost in operational dependability has been incorporated into this system, exemplified by: The crystal frequency standard, phase-locked to the rubidium frequency standard to within ±0.2 degrees, is automatically switched in place of the rubidium standard if the rubidium standard output drops to half amplitude or if there is a dropout of a whole cycle. A monitoring circuit accomplishes similar switching between master time-of-year clocks. Synchronous, non-transient switching between time signal generator outputs is provided by the transfer switch unit.

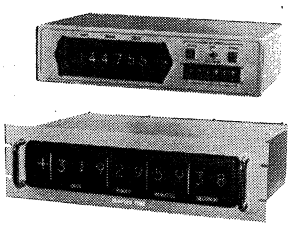
Redundancy also exists in the system master power supplies. An internal battery pack is also automatically selected in the event of main power failure. System battery chargers keep the stand-by pack ready at all times.

DIGITAL EQUIPMENTS AND SYSTEMS



TIME CODE GENERATORS

This line of advance-design equipments begins with the GTG-1000, developed to meet the most stringent time correlated instrumentation requirements; and extends to the GTG-3000, designed for applications requiring a reliable, low-cost time signal source of ±1 second accuracy.

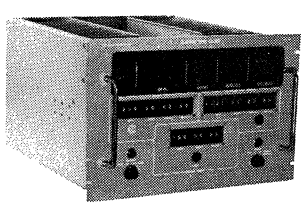


REMOTE DISPLAYS

Digital display indicators are available individually, or as companions to GSS time code generators. Simple time-of-year, time-of-day, and elapsed time indicators are featured, as well as models which incorporate selected time of event output. They are available in individual cabinets finished to customer specifications, or as rack mounted units.

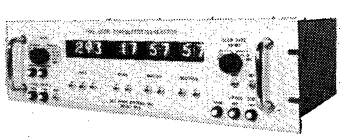
AIRBORNE TIME CODE GENERATOR

Model 8156, qualified for airborne use, is 5.6 x 6.6 x 3.5 inches and weighs only 3.2 pounds. It generates modified IRIG B time code with frequency stability of 1 x 10^{-6} and drift rate parts of 10^{8} per week provided by an internal temperature-compensated crystal oscillator. Time is preset by a 20-bit parallel BCD time-of-day input and an external switch or relay closure. An internal nickel-cadmium battery provides backup power during input power dropouts.



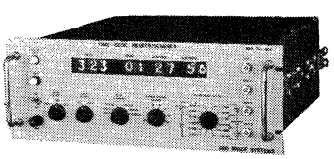
ELAPSED TIME CLOCKS & COUNT-DOWN GENERATORS

Capable of countdown and countup, with controls for hold count and count adjust, these units can be started automatically at a preset time-of-year, by an external start pulse, or manually by a front panel pushbutton. Preset time-of-year and preset initial elapsed time value (plus or minus) are set in by convenient front panel thumbwheel switches.



RANGE TIME CODE TRANSLATOR/GENERATOR

This RTC T/G is capable of functioning either as a subcentral timing system or an independent timing generator. Using dual-in-line integrated logic, the Model 8174 generates all the necessary timing signals and pulse rates for use in radar systems and computers. This includes NASA BCD and serial codes as well as binary time-of-year in tenths of seconds. Solid state components and technology are used throughout.



TIME CODE READER SCANNER

The GSS Time Code Reader/Scanner, Model 8108, provides reliable phase-coherent serial and parallel outputs when reading noisy time code signals with non-coherent carriers. An acquisition/lock feature assures coherent time outputs for up to 32 frames of signal dropout once sync is initially acquired. The standard unit handles the NASA 36-bit time code at the standard 1 kHz rate and four non-coherent carrier rates. Other codes and rates are optionally available.

Followng the introduction of silicon integrated circuit micrologic modules, Geo Space Systems, Inc. redesigned its line of standard building block module cards and incorporated them into a new family of timing system equipments. The company meets the needs of government and industry from a simple clock to a dual or triple-redundant, highly sophisticated digital system.

In the data display field, a team of engineering specialists is available to analyze customer needs and custom tailor our standard system configurations to their specific needs.

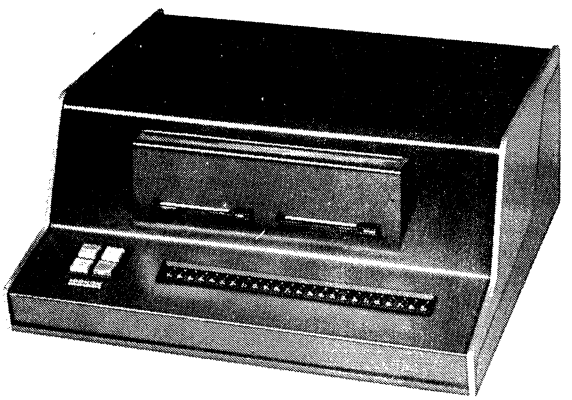
HICKOK DATA COLLECTION TERMINALS

Hickok offers a broad line of modular data collection terminals designed to interface directly with your processor, concentrator or data set.

Input is from card readers, badge readers or variable data switches, and the output is in ASCII, with optional substitution of a parity bit for the eighth ASCII bit.

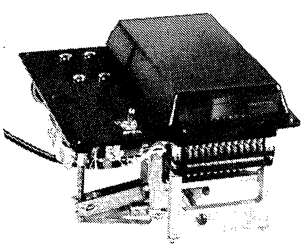
The parallel interface is open collector, bit parallel, and the serial interface is at EIA-RS-232 or MIL-STD-188 levels, bit serial, synchronous or asynchronous. Provision has been made for generation of a horizontal parity character as well as for the inclusion of parity checks on incoming control characters.

Indicators have been provided to indicate terminal status and successful/unsuccessful transmission. Automatic dial-up, automatic retransmission, and time-outs are available as options.



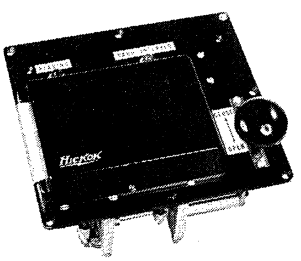
HICKOK STATIC CARD READERS

INDUSTRIAL READERS



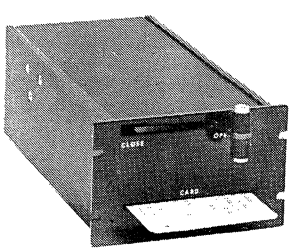
Model 540M

- 50 to 540 contacts
- Form A or Form B
- 10 amperes capacity; 3 amperes hot
- More than 100,000 operations
- Manual or motor operated
- Prices from $100
- OEM quantity discounts



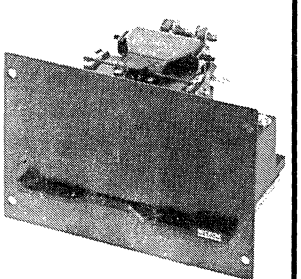
Model 324H

TAB PRODUCTS



Model 960SL

- Tab card, credit card, badge readers
- Form A contacts
- 500 milliamperes capacity; 100 milliamperes hot
- More than 1,000,000 operations
- Manual or motor operated
- Prices from $100
- OEM quantity discounts



Model 264S

A/D CONVERTERS

8-BIT — $99 — Model 519

- **Completely Self-Contained**
- **8 Bits**

The Model 519 is a compact 8-bit A/D converter. It is completely self contained and requires only power (±15, 5V) for operation. Conversion time is 200μS or less. The unit uses an internal D/A converter to generate a ramp. When the value of the ramp is equal to the input signal the D/A stops; the digital output will be proportional to the analog voltage. Clock, logic references, etc., are all built-in.

10-BIT — $195 — Model 501

- **Completely Self-Contained**
- **10 Bits**

The Model 501 is a completely self-contained 10-bit A/D converter. The unit converts the full 10 bits in less than 50μS. Input signal range is from 0 to +10V. However, through an external trimming resistor, it may be adjusted to a range of ±5V. The unit contains its own references, its own clock, and all the digital logic required for operation. It is powered by ±15V @ 30mA and +5V @ 300mA.

NEW

A/D 525

The 525 Series uses the successive approximation technique to do the analog to digital conversion. Conversion times of up to 1μS per bit and up to 12 bit accuracy are available.

3 DECADES BCD — $175 — Model 510BCD

The Model 510BCD is a 3 decade BCD A/D converter. The unit is similar in technique to the 519. It features an overall conversion time of 1mS with an accuracy of .1% ±½LSB.

MODEL	519	510 BCD	501
Bits	8	3 Decades BCD	10
Type	Ramp	Ramp	Dual Speed Ramp

SAMPLE HOLD/ PEAK DETECTORS

INFINITE HOLD— PEAK DETECTOR/ SAMPLE HOLD — $235 — Model 750

The hybrid analog/digital techniques used in the Model 750 produce the unique feature of no decay (droop) of the stored value, regardless of the duration of the holding period. Upon command, the circuit is reset to zero volts and begins monitoring the analog input. Although the input and output are both analog voltages, the signal is internally held in digital form. Selection of peak detection or sample-hold is done through external pin interconnections.

ECONOMY TRACK/HOLD — $95 — Model 720

- **High Input Z**
- **Low Drift**

The 720 is a general purpose track-hold circuit which uses an internal high quality polystyrene capacitor to hold the signal. The unit features high input impedance—20k ohms paralleled by 10pF capacitance. Important specifications are: accuracy—.05%; decay—1mV/mS; acquisition time—20μS; aperture time—50nS; drift—20uV/°C; power supplies—±15V; signal range—±10V. Price (1-9)—$95.

MODEL	750	720
Input-Output Range	0 to +10V	±10V
Decay	None	1mV/mS
Linearity[1]	±.2%	.05%
Tracking Rate[2]	.25V/μS	5V/μS

D/A CONVERTERS

ECONOMY 8-BIT — $29

Model 329

- **DIP Compatable**
- **Low Cost**
- **Ready to Use**

The 329 is an extremely low cost, small size 8-bit D/A converter which requires only power for operation. The unit is self contained and includes an internal reference and output amplifier. It was designed for DIP compatability. The dimensions are 1.1" x 1.7" x .385".

GENERAL PURPOSE — $57

Models 325-BP-8 and 325-BP-10

- **Everything Built-In**
- **Bipolar Out**
- **8 and 10 Bits**

These units are low cost general purpose voltage output D/A converters. They are completely self contained with internal references and an output amplifier. The 325-BP-8 has 8 bits of resolution whereas the 325-BP-10 has 10 bits. Otherwise the units are identical. Their output voltage is bipolar (±5V, adjustable to ±10V). The units have a low profile suited for .5" center-to-center mounting.

FAST, ECONOMY — $69

Model 321

- **Built-In Reference**
- **Settles in 750nS**
- **10 Bits**

The Model 321 is a current output, fast settling, 750nS, 10-bit D/A converter. The full scale output current (+8.25mA) may be converted to a voltage of up to +1.75V by terminating the unit with a resistor to ground. No amplifier is required for operation. The Model 321 has a built-in reference and is relatively insensitive (.05%/%) to power supply voltage (+15V) fluctuations. It features a low profile, .385". The Model 321-BCD is available with 3 decades BCD coding.

MULTIPLYING — $125

Series 315 — **Model 315-10**

- **Digital X Analog**
- **4 Quadrants**
- **10, 11, 12 Bits**

The Series 315 are multiplying D/A converters available in 10, 11, and 12 bits. In these units, a reference is externally applied and can vary from -10V to +10V. The output is proportional to the product of this reference and the digital input. By simple pin interconnection these units may be used either in 2 quadrants with binary coding, or in 4 quadrants with 2's complement coding. They have a built-in reference so they may also be used as a conventional D/A converter.

FAST, MULTIPLYING — $125

Series 310 — **Model 310-10**

The Series 310 D/A converters are fast settling, current-output, multiplying types available in 10 and 11 bit versions. The external reference may vary from 0V to +10V. Accuracy, however, decreases somewhat for small references. The settling time of the unit for a 10V reference change is 5μS and for a digital change is 500nS. These units are particularly useful for CRT applications where high speed is important.

NEW ULTRA FAST SETTLING

Model 390

The Model 390 is an ultra fast settling current output D/A converter with a resolution of 10 bits. It settles to 0.05% in less than 75nS. Its output current (5mA F. S.) may be converted to a voltage of up to +1.75V by a single terminating resistor to ground.

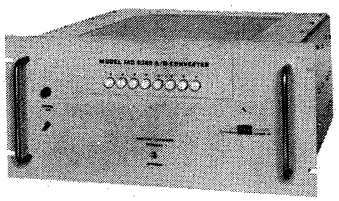
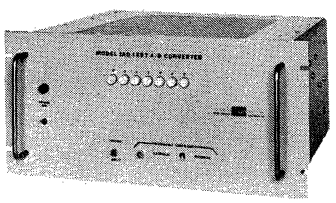
HIGH SPEED ANALOG-TO-DIGITAL CONVERTERS

OUTSTANDING FEATURES

- DATA CONVERSION RATES UP TO 320 MEGABITS
- APERTURE TIME ON THE ORDER OF TENTHS OF NANOSECONDS
- WORD SIZES RANGING FROM 4 TO 10 BITS



MODEL IAD0280



MODEL IAD1207

GENERAL DESCRIPTION

In the world today, where digital processing speeds are ever increasing, Inter-Computer Electronics, Inc. offers a complete line of Ultra High Speed Analog to Digital Converters.

With Inter-Computer's line of high speed converters, fast and accurate, digital signal processing can be used in areas where they were never before thought possible. To name just a few —

Radar — Normal and High Resolution
Television — Color and Black and White
X-ray Analyses
Multi-channel wideband communication systems

Inter-Computer Electronics' Analog-to-Digital converters come in two separate series. Series A incorporates new ultra high speed comparators, digital-to-analog converters, and wide bandwidth amplifiers all designed specifically by Inter-Computer Electronics. Series B utilizes more conventional integrated circuit components in conjunction with high speed circuitry to provide a basis for wide bandwidth signal processing at reasonable prices.

All analog-to-digital converters of Inter-Computer Electronics utilize a modular design. This design concept can accommodate a wide variety of word sizes, sampling speeds, and mechanical formats and is achieved with full consideration to the circuit layout problems that are essential to the accurate performance of high speed digital circuitry.

ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE RANGE

0 to 5 volt full scale
Other fixed input ranges both bipolar and unipolar are available as options.

INPUT IMPEDANCE

Series A, 50 ohm or 91 ohm
Series B, 1000 ohm nominal
Special options are available to permit higher input impedance. These options are dependent on the maximum input frequency.

DIGITAL DATA OUTPUTS

Parallel Output
Logical "1" — 3.3v typical
2.4v minimum
Logical "0" — 0.4v maximum
0.2v typical

CODES AVAILABLE

Both Series A and B conversion systems can be supplied with the following codes: direct binary or BCD; for bipolar signals signed 2's complement and binary magnitude and sign.

END OF CONVERSION PULSE

Series A, end of conversion pulse is a logic "1" 10 nanoseconds wide available 5 nanoseconds after conversion is completed. Series B, end of conversion pulse is available 20 nanoseconds after conversion is completed.

EXTERNAL CONVERT COMMAND

For synchronous drive from an external signal source, Series A requires a pulse 5v ±0.5 with a maximum width of 5 nanoseconds into 91 ohm load. Series B requires 5v ±0.5v with a maximum width of 15 nanoseconds into 500 ohm load.

MECHANICAL

The standard converters are capable of mounting in a standard 19 inch RETMA rack.
Dimensions of the standard packages:
Front Panel Width — 19"
Height — 5¼" to 8¾"
Depth — 17"

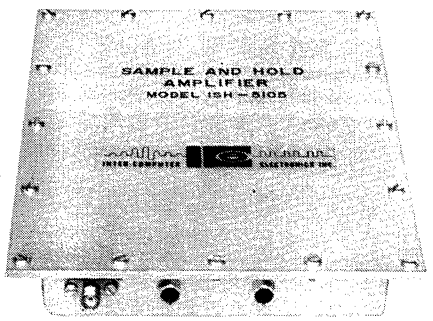
SAMPLE AND HOLD ISH-5105

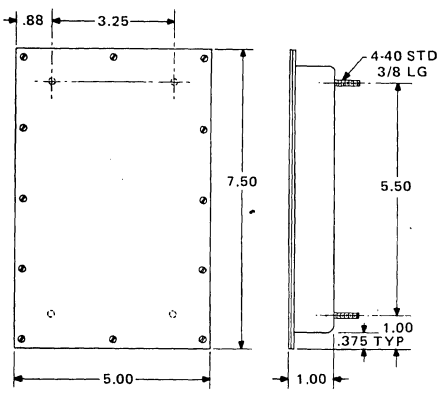


Inter-Computer Electronics, Inc. sample and hold amplifiers, contain an ultra fast analog switch, holding capacitors and input and output buffer amplifiers. This is a true sample and hold, and is used with Inter-Computer Electronics, Inc. high speed analog to digital encoders.

Upon external command, the analog switch is closed and the charging capacitors charged to final value. After this acquisition interval, the charging capacitor is disconnected from the input and holds the value until the next sample pulse.

The sample and hold amplifier has a wide range of applications with analog-to-digital converters, data acquisition systems and transient analysis.

The unit is packaged in a shielded case. Appropriate signal terminations, ground planes and layout insure accurate operation in the most severe signal environments.



* Time after convert command for the output to reach X% of final value
** Total rms time error from initiation of convert command

SERIES M MODULES

MODEL NUMBER	RESOLUTION	CONVERSION TIME	ACCURACY
IAD-1410M	10 bits	10 usec	±0.05% of full scale ±½LSB
IAD-1409M	9 bits	6 usec	±0.1% of full scale ±½LSB
IAD-1308M	8 bits	1 usec	±0.2% of full scale ±½LSB
IAD-5206M	6 bits	0.5 usec	±0.8% of full scale ±½LSB
IAD-2204M	4 bits	0.2 usec	±3% of full scale ±½LSB

The Series M high-speed analog-to-digital encoders offer new opportunities for high-speed digital signal processing. The modules in the M series employ an improved version of the successive approximation method of encoding. The modules are available in a format that permits mounting on a printed circuit card or in a shielded case suitable for system use. The design of these converters incorporates all mechanical features for reliable operation at ultra-high speed. Necessary signal terminations, ground planes, and case shieldings are provided.

The Series M modules are suitable for a wide variety of digital signal processing applications and data acquisition systems. The modular analog-to-digital converters are compatible with the memory cycle times of many new computers and solid state memories.

SPECIFICATIONS

ANALOG INPUT
0 to +5v full scale — Bipolar Option Available.

INPUT IMPEDANCE
1000 Ohms. Coax Cable should be terminated in the appropriate characteristic impedance for the length cable used.

DIGITAL OUTPUT
Parallel outputs, standard T^2L levels, each output to drive one T^2L load. Output coding is straight binary or 2's complement as required.

EXTERNAL ENCODE COMMAND
This line is activated by a logical one level, having a pulse width of 50 ns. and occurring after the data ready pulse.

DATA READY PULSE
This pulse is a logical one, 30 nanoseconds wide and occurs 1 microsecond after an encode command.

EXTERNAL ENCODE ENABLE
This line is normally at logical zero level for internal encoding and is held at the logical one level for external encoding.

SAMPLE PULSE
This pulse is a logical one, 50 ns. wide. It occurs following a data ready pulse when the unit is in the internal mode, and it occurs immediately following an external encode command when in the external encode mode.

INTERNAL ENCODE ENABLE
This line must be the complement of the external encode enable line and is normally at the logical one level for internal encoding and is held at the logical zero level for external encoding.

OPERATING TEMPERATURE
0°C to +70°C

POWER REQUIREMENTS
+ 5.0 volts ± 5% at .55A
+15.0 volts ±.2% at 150 MA
−15.0 volts ±.2% at 250 MA

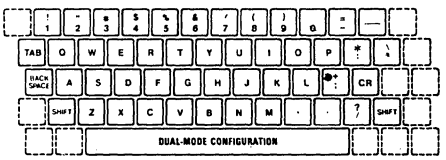
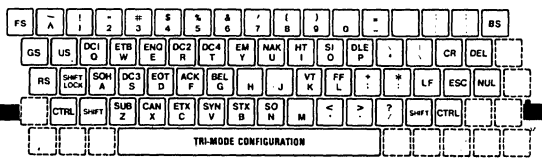
SERIES 550 Electronic Keyboard

COMPLETELY SOLID STATE



Model 550 ASCII Keyboard Arrays



SERIES 550 FEATURING:

- Magnetic Core Switching
- ASCII, EBCDIC, BCD or Special Encoding
- Simple Construction
- Unlimited Configurations— Design your own Keyboard layout
- Compatibility with 5 volt IC Logic
- Negative or Positive Logic Output
- Minimum Power Consumption (3.5 watts)
- Keys Bottom on Housing — Not P.C. Card

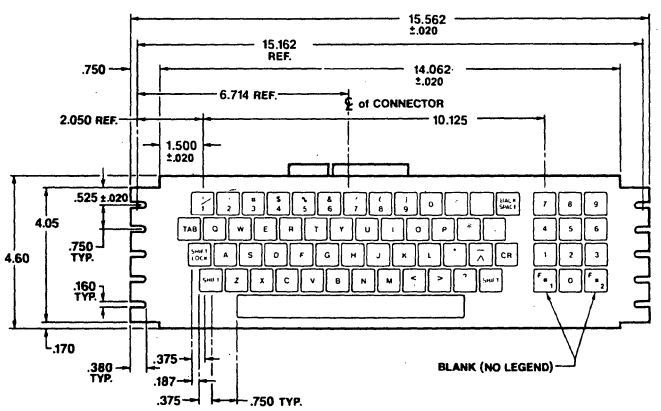
SERIES 550 ELIMINATES:

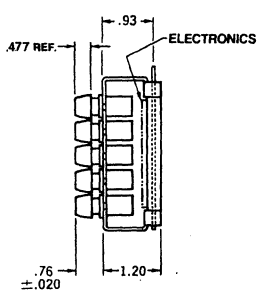
- Mechanical Linkage
- Delicate Chips
- Contact Bounce

SERIES 550 OPTIONS:

Strobe Output • Odd or Even Parity • Multi-Key Interlock • Two Key Rollover • Shift • Repeat Function • Shift Lock • Cabinet • Control Function Keys • N Key Rollover

SERIES 550 Specifications





INPUT POWER

+5 VDC, ±5% regulation
700 milliamps maximum

OUTPUT LEVELS

Logic "0": +2.4 VDC nominal @ 1.5 ma drive

Logic "1": +0.4 VDC maximum @ 16 ma minimum sinking current

WEIGHT

Without cabinet: 3.7 lbs. (approx.)
With cabinet: 11.5 lbs. (approx.)

Patents Pending

AMBIENT TEMPERATURE

Operating: 0°C to +75°C
Non-operating: −55°C to +85°C

MODES OF OPERATION

Mono-mode: no shift
Dual-mode: unshifted, shifted
Tri-mode: unshifted, shifted, control

CONNECTOR INTERFACE

Edge card accepts standard Cinch Jones connector or equivalent.

KEYSET CONFIGURATION

Keys mounted on ¾ inch centers with standard 3/8 - 3/16 - 3/8 inch typewriter offset between rows.

METRIC

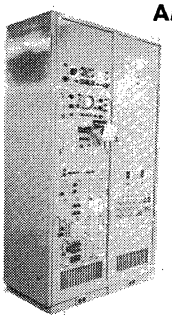
Systems Corporation

CUSTOM DIGITAL SYSTEMS FROM STANDARD SUBASSEMBLIES

TIMING EQUIPMENT

AMR TIMING SYSTEM

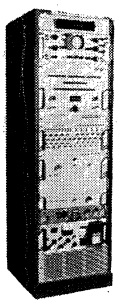
Model 8379



Timing System Model 8379 provides Atlantic Missile Range Time Codes B1, B2, C1, D1, and D5. The system features automatic or manual WWV synchronization, a WWV receiver, a synchronization oscilloscope, a waveform monitoring oscilloscope, a test point selector switch, and a versatile output patch panel. Models designed for ground station, airborne, or shipborne operation are available.

IRIG TIMING SYSTEM

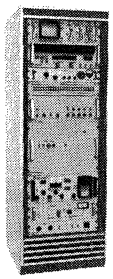
Model 8020



Timing System Model 8020 generates IRIG Codes A, B, C, and D. The system contains receivers for automatic or manual synchronization to WWV, VLF or LORAN "C". Other features are: a Decimal Time Display in Hours, Minutes, and Seconds, an oscillator stability of 1 part in 10^{10} per day, an oscilloscope for waveform monitoring and fine synchronization, and an output panel for patching time codes and pulse rates to any one of 10AC and 12DC line driver amplifiers.

CENTRAL TIMING SYSTEM

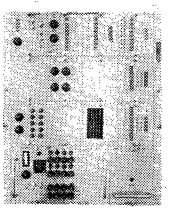
Model 8259



Model 8259 Central Timing System contains a Model 8259-1 Time Code Generator, an oscilloscope, a WWV receiver, a VLF receiver, and a precision frequency standard. The Model 8259 Central Timing System provides an IRIG "B" output with built-in provisions for synchronization to WWV. Stability of the internal frequency standard is 5×10^{-9} per day. A VLF receiver is included for calibrating the frequency standard.

AMR TIME CODE GENERATOR

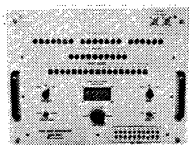
Model 8379-1



Time Code Generator Model 8379-1 is designed for mobile operation and is suitable for either airborne or shipborne use. Relay and neon output amplifiers are provided. The unit generates AMR Time Codes, Numbers B1, B2, C1, D1, and D5. Solid-state modularized construction permits expanding to additional codes by adding appropriate code generator modules.

IRIG TIME CODE GENERATOR

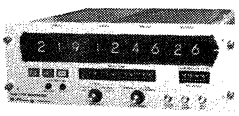
Model 8020-1



Model 8020-1 Time Code Generator simultaneously generates IRIG Codes A, B, C, and D synchronized to within 1 microsecond. Additional features include: Solid-state printed circuit card construction, taper-pin wiring, propagation delay correction to better than 1 microsecond, digital time retard and advance, parallel binary coded decimal Time-of-Day, and parallel straight binary Time-of-Day in millisecond increments. Other output formats and pulse rates are available on special order.

TIME CODE GENERATOR

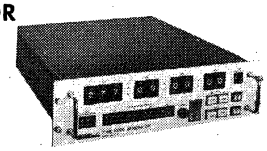
Model 8259-1



Model 8259-1 Time Code Generator provides both serial and parallel IRIG "B" outputs. The unit features a decimal display of days, hours, minutes, and seconds, semi-automatic WWV tick synchronization, propagation delay correction, 1×10^{-8} per day oscillator stability, and an optional two hour battery for continuous operation during power failures.

TIME CODE GENERATOR

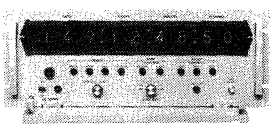
Model 8134



Model 8134 Time Code Generator is available in options capable of simultaneously generating up to five serial IRIG modulated time codes. Digital advance/retard allows manual fine synchronization. A front serviced projection display provides a decimal indicator of days, hours, minutes, and seconds. The unit contains an unusual self-check feature for operating 1000 times faster than normal. A lamp test feature is also provided.

TIME CODE GENERATOR

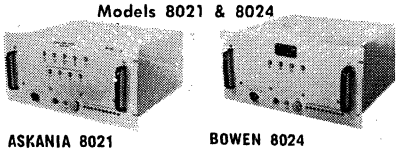
Model 8258



Model 8258 Time Code Generator provides four separate, isolated serial IRIG "B" outputs having individually adjustable levels. Parallel BCD outputs representing days, hours, minutes, seconds, and milliseconds, are also provided. The unit features a panel mounted days, hours, minutes, and seconds display plus digital advance/retard for fine synchronization.

CAMERA TIMING UNITS

Models 8021 & 8024

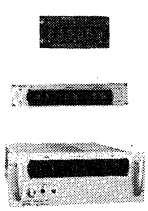


ASKANIA 8021 **BOWEN 8024**

The Askania and Bowen Camera Demodulators extract remote camera control and timing signals from the IRIG Time Code "B" signal. The units provide relay closures initiating shutter operation and high level neon outputs for film track timing. Three cameras may be started or stopped, remotely and independently, using three camera demodulators with channel selector switches set for three different IRIG "B" control function bit channels.

TIMING TERMINAL UNIT

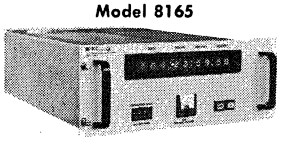
Model 8205



Timing Terminal Unit, Model 8205, accepts serial IRIG "B" and produces a decimal display of hours, minutes, and seconds. The unit is capable of driving as many as six remote time displays. Optional remote time displays are available in standard and miniature sizes.

TRANSLATOR GENERATOR

Model 8165



Model 8165 Time Code Translator accepts either IRIG "A" or "B" as an input and produces IRIG "A", "B", "C", "D", and "E" outputs. A typical application of the Model 8165 is the distribution of IRIG "A" by radio link to a number of remote sites each having an 8165 translator. A precision internal oscillator provides continuous output time codes even during loss of input signal. Re-synchronization occurs automatically when the input signal returns.

TAPE SEARCH

Model 8193

The Model 8193 is capable of reading either IRIG "A" or "B" serial time codes. It may be used either for Tape Search or as a general purpose display for serial IRIG "A" or "B". A contact closure is provided when the accumulated time matches the value preset by the operator on panel mounted decade thumb-wheel switches. The unit is capable of driving as many as six remote displays.

Metric Systems Corporation produces an assortment of digital equipment ranging in scope from simple logic modules to complex digital instrumentation systems. Digital Systems designed and fabricated by Metric Systems are now in operation on both the Atlantic and Pacific Missile Ranges and most other Aerospace Instrumentation installations. Metric Systems invites your inquiries for solutions to problems involving special applications.

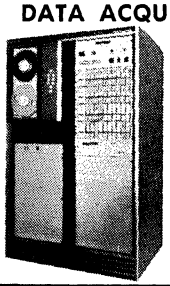
CUSTOM DIGITAL SYSTEMS FROM STANDARD SUBASSEMBLIES

DATA ACQUISITION SYSTEMS

DATA ACQUISITION SYSTEM

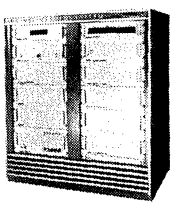
Model 8126



Model 8126 Data Acquisition System accepts analog data, digitizes this data, and records the digital data on ½ inch magnetic tape in an IBM compatible format. Front panel controls provide selection of tape speeds and tape packing density. An internal clock is provided for time tagging each frame of data. The maximum sampling rate of the Model 8126 Data Acquisition System is 45,000 samples per second.

SUB-MULTIPLEXING SYSTEM

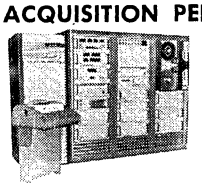
Model 8144



Model 8144 Sub-Multiplexing System scans 320 low-level input channels at a maximum rate of 200 steps per second. An internal IRIG "B" time code reader is provided for displaying the digitized input voltage of any selected input channel. The multiplexer is designed for low-level input signals in the range of 5 millivolts full scale and features a temperature drift of only 2 microvolts over a 25°C operating range.

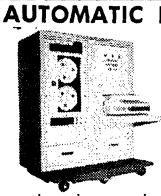
DATA ACQUISITION PERIPHERAL

Model 8226



Model 8226 is a computer controlled data acquisition system. The computer performs data analysis, converts to engineering units, and prints out operator instructions. Data is analyzed in real time and recorded for future analysis. The system processes 40 analog channels to .01% accuracy.

AUTOMATIC DIGITAL DATA LOGGER MODEL 8054

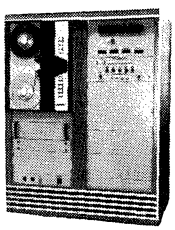


The Automatic Digital Data Logger, Model 8054, performs storage, conversion, parity generation, and logging of binary coded decimal (BCD) data generated by the AN/GJQ-9(V)2 Checkout Sequence Programming Set. The input data to this system is recorded on magnetic tape in an IBM compatible format.

The record length is variable and in the case of manual data, is controlled by manual operation of an "end of record" switch. Record length is limited only by the computer or the interface equipment.

MAGNETIC TAPE DIGITAL RECORDING SYSTEM

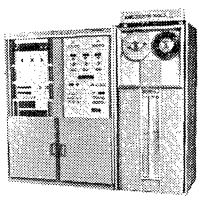
Model 8266



Model 8266 is basically a digital data formatter and recorder. The unit receives digital data words from several external devices at various data rates. The digital data is stored in a magnetic core memory and recorded on magnetic tape in IBM computer compatible format. The system contains a precision Time-of-Day clock for time tagging recorded data.

DATA ACQUISITION SYSTEM

Model 8176



System Components Include:
- Irig Time Code Generator
- Tape Search System
- Sample and Hold Amplifiers
- Analog Multiplexer
- Analog/Digital Converter
- Magnetic Core Memory
- Magnetic Tape Recorder

System Capabilities Include:
- Accept analog input signals
- Accept digital input words
- High speed A/D conversion
- Prepare tape in IBM format
- Time tag all input data
- Patch panel selects operating modes

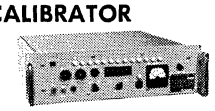
TEST EQUIPMENT

DIGITAL MOVING TARGET SIMULATOR

Model 8007M

Simulator Model 8007M is designed for use with "multiple time around" tracking radars. Late model radars, such as the AN/FPS-16 (V) radiate a number of transmitter pulses before the first distant echo is received. To simulate a distant target, the simulator must be capable of receiving several input pulses before producing the first delayed echo pulse. Conventional simulators are not capable of responding to an input pulse before the delay interval is completed. In Metric's Model 8007M Simulator, as many as eighteen (18) pulses may be propagating through the delay section simultaneously.

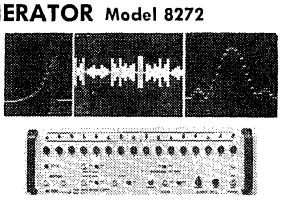
RADAR MOVING TARGET SIMULATOR/ CALIBRATOR



Model 8220

Series 8220 Radar Target Simulator has been designed for use either as a moving target video simulator or as a precise fixed range calibrator. The simulator is completely digital in operation, controlled by an internal precision VHF frequency standard. Range is preset by decimal thumbwheel switches. The instantaneous range value is available as a parallel binary output word and as an optional numerical display. Overall accuracy is ±3 feet in the internal PRF operating mode. The unit provides precise delay settings corresponding to radar ranges of 100 to 1,000,000 feet. Velocity may be varied from 0 to ±10,000 feet/second. The unit is designed to meet military specifications and has been designated SG903/APM-336V for government procurement purposes.

PROGRAMMABLE WAVEFORM GENERATOR Model 8272

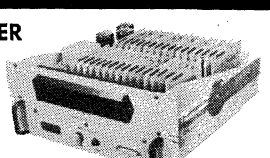


Model 8272 Programmable Waveform Generator output consists of sixteen individually controlled voltage segments which may be individually adjusted to produce any desired pattern. Stepping rate for the segments may be varied from 10 steps per second to one million steps per second or controlled by a pushbutton. The pattern may be reflected to produce a symmetrical 32-segment waveform.

BINARY/DECIMAL & DECIMAL/BINARY CONVERTERS

BINARY/DECIMAL CONVERTER

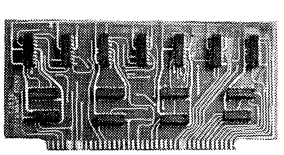
Model 8025



Model 8025 Binary-to-Decimal Converter is a high speed device for conversion of straight binary words up to 19-bits to their decimal equivalent and displaying the result. A typical application of the Model 8025 would be as a degrees, minutes, and seconds display for a straight binary shaft angle encoder. Any specified multiplication constant can be permanently wired into the converter making it possible to display the input binary word in any convenient unit such as hours, minutes, seconds, miles per hour, radians, degrees, minutes, seconds, etc.

DECIMAL-TO-BINARY CONVERTER CARD

Model Z-253



Model Z253 accepts three binary coded decimal digits on 12 lines and delivers a straight binary word on ten output lines. Decimal-to-Binary conversion is accomplished by a parallel logic matrix providing continuous output information. No external gating or control circuitry is required. The card operates from a single 5 volt power source and uses standard 0 and 5 volt integrated circuit logic levels.

Metric Systems Corporation produces an assortment of digital equipment ranging in scope from simple logic modules to complex digital instrumentation systems. Digital Systems designed and fabricated by Metric Systems are now in operation on both the Atlantic and Pacific Missile Ranges and most other Aerospace Instrumentation installations. DIGITAL DATA COMMUNICATIONS EQUIPMENT

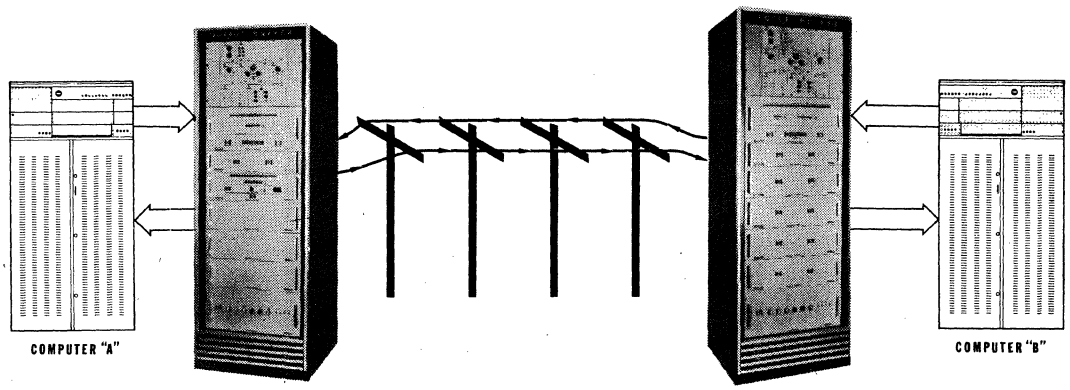
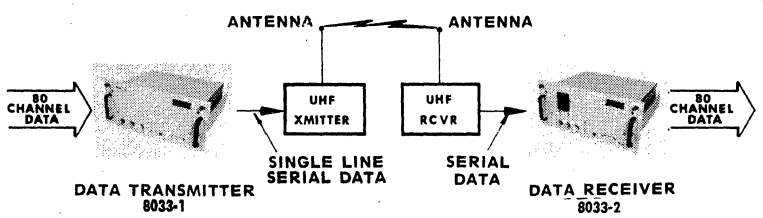
COMPUTER TO COMPUTER

The Model 8114 Data Transmitter (Output Buffer) and the Model 8114 Data Receiver (Input Buffer) form a complete two-way data transmission link between two digital computers. Data is transmitted at a rate of 2400 bits/second on Class 4B telephone lines. A single Model 8114 Transmitter/Receiver provides 4 separate channels each having a capability of transmitting 2400 bits per second. Two separate error detecting codes are employed to verify the quality of the data transfer.



POINT TO POINT

Model 8033 Data Distribution System transmits up to 80 channels of digital data from a centrally located transmitting station to any number of remotely located receiving stations. A complete Data Distribution System consists of a single 8033-1 Transmitter Unit located at the central transmitting station and an 8033-2 Receiving Unit located at each receiving station. The Transmitting Unit accepts up to 80 separate parallel input data lines and converts to a single serial output line suitable for transmission by a radio link. The Receiving Unit accepts the single line serial information and reconstructs the original 80 channel input data. Each of the 80 data channels may be operated at bit rates as high as 1000 bits per second producing a serial bit rate as high as 80,000 bits per second.



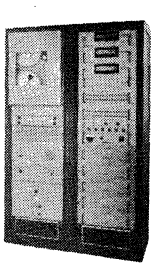
REMOTE LOCATION TO COMPUTER

HIGH DENSITY DATA TRANSMITTER

MODEL 8062

Model 8062 High Density Data Transmitter will accept serial Azimuth, Elevation and Range data words from a radar set. Timing pulses and a parallel time word are obtained from a time code generator.

The transmitter will accept 17 serial bits of Azimuth and Elevation data, a 20-bit Range word and two 36-bit auxiliary words which may be manually set in through the use of front panel switches.

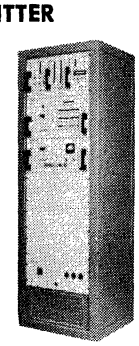


LOW DENSITY DATA TRANSMITTER

MODEL 8031

Model 8031 (CASY II) receives digital Radar Acquisition Data from a 7094 computer in the form of three 13-bit data words, 6 auxiliary bits and one sub-synch. The words are parallel dumped into a 45-bit input buffer register, transferred to a shift register and shifted out serially at 480-bits/10 frames per second rate.

The output bits modulate a 1920 CPS carrier to drive a standard 600 ohm telephone line. An internal test generator is provided which is capable of simulating computer commands.



MULTIPLE RADAR DATA TRANSMITTER

MODEL 8023

Model 8023

Real Time Data System, Model 8023, is the entire digital data link between 4 AN/FPS-16 radars and a Univac 1218 computer. Interrogate and Shift commands generated by the system are transmitted to the 4 radars. Incoming digital radar coordinate words are tagged with 9-bit identification and 23-bit time information, converted to Univac format, stored, and fed into the computer upon command.

Metric Systems Corporation produces an assortment of digital equipment ranging in scope from simple logic modules to complex digital instrumentation systems. Digital Systems designed and fabricated by Metric Systems are now in operation on both the Atlantic and Pacific Missile Ranges and most other Aerospace Instrumentation installations. Low Level Scanners by Matrix Corporation

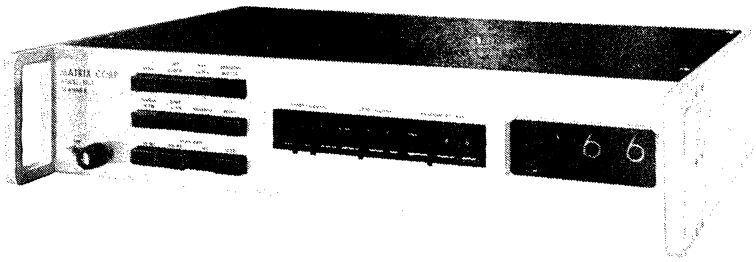
MODEL 1701

- **Random access. Channels controlled by a BCD input to allow programming by external source such as computer.**
- **Sequential scanning with end point selection by front panel digital switches.**



GENERAL: The BCD input is compatible with standard TTL logic. The unit contains BCD output for use on auxiliary equipment. Switches are available in multiples of 10 up to 100 channels in a 3½" cabinet.

CAPACITY: 10 to 100 channels are available in the 3½" master. Slave units with 10 to 200 channels in 3½" cabinets allow expansion to 1000 channels.

SCAN RATE: The scan rate may be as fast as 5 msecs.

INPUT: 1. Level — Standard BCD TTL logic. True equals +5 volts and false equals 0 to +0.5 volts. Unused inputs must have a false level or be terminated in 500 ohms max. 2. BCD enable — A false signal must be applied to enable the input data.

CHANNEL READOUT: Neon numerical indicator lights are provided for a visual indication of the channel selected.

CONTACT RATINGS: 500 volts maximum between conductor and chassis, 350 volts maximum between conductors. Current should not exceed 100 ma for maximum life.

OPTIONS:

A. **Manual Digital Switch** — The switch can manually select any desired channel from the front panel.

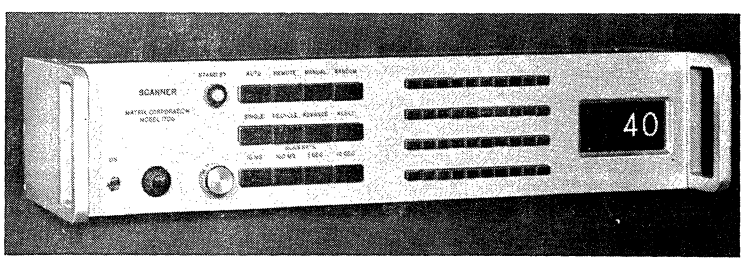
B. **Sequential Scan** — 1. Advance: Application of a true level will cause the scanner to advance one channel. 2. Reset: Application of a true level will hold the scanner in reset (000) position until true level is removed. Short or open circuit is "false." Positive 5V is true. Input impedance is 10K ohms. 3. Stop or Ctr. Disable: Application of a true level will disenable the advance input or stop any external clock inputs. A false level is required to allow sequential scanning.

C. **Sequential Scan with End Point Selection** — Two digital switches are provided on the front panel to manually select the start and the stop channel for sequential scanning.

D. **Int. Clock** — 1. Rate: Continuously variable from .01 to 10 seconds per channel. 2. Single/Recycle: A front panel switch allows a single scan of all switches or continuous scanning of all switches. 3. Internal/External: Front panel switch selects the internal clock or an external clock input. 4. Start Input: Application of true level at the start input will initiate a scan of all switches only when the scanner is in the 000 condition.

DIMENSIONS: 3½" high x 17" wide x 10" deep.

LITERATURE: Write for Bulletin RS-71.



MODEL 1700

- **40 channels . . . expandable to 1000**
- **Digital Channel display**
- **Complete remote programming**
- **3-wire reed relay switching**
- **Scan only channels selected**
- **No delay by-passing off channels**

APPLICATION: Can be used to sample directly the output from strain gages, thermocouples, pressure transducers or other low level sources requiring microvolt resolution. Each channel is composed of an input pair and shield which is sequentially sampled. Complete programming flexibility is provided by the push-button channel selectors which determine the channels to be sampled.

CAPACITY: 10 to 40 3-wire channels in the standard 3½ inch cabinet. (Multiples of 10). Slave units allow expansion to 1000 channels. Slave capacity is 10 to 80 3-wire channels per cabinet. Front panel push-buttons select channels to be scanned.

CHANNEL IDENTIFICATION: Front panel digital display, and BCD 1248 (0 = 0; 1 = +5V).

INPUT VOLTAGE RANGE: 500 volts maximum between conductor and chassis. 350 volts maximum between conductors. Current should not exceed 100 ma. for maximum life.

SCANNING SPEEDS: 10 milliseconds to 10 seconds per channel.

CONTROLS: Mode selector, scan rate selector, advance button, reset button, delayed pulse control.

DELAYED PULSE: A pulse which can be delayed from 4 milliseconds to 3 seconds following a channel advance, is provided. The pulse can be used to delay the start of counters, DVM's, printers or other external equipment. Pulse amplitude +5 volts min.

OPERATING MODES: **Internal** — Continuous scan, single scan, single step. **External** — Continuous scan, single scan, single step. A positive 5 volts pulse will start or advance the Scanner.

INHIBIT: A positive 5 volt level will inhibit the Scanner from advancing or starting.

THERMAL NOISE: 5 microvolts standard.

TEMPERATURE: **Operating** 0°C to +50°C, **Storage** — 55°C to +85°C.

POWER REQUIREMENTS: 117 V, 50-60 Hz, 20 watts.

CONNECTORS: All mating connectors provided.

DIMENSIONS: 3½" high, 17" wide, 12" deep.

LITERATURE: Write for Bulletin S1-67.

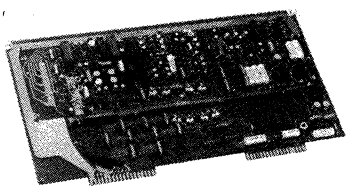
Multitech Automation Products

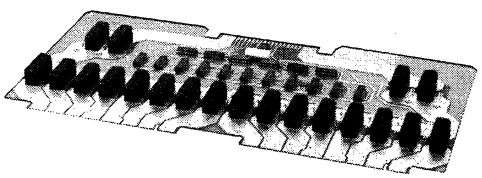
A Unique, Low Cost Approach To Low Level Industrial Data Acquisition Systems!

CHECK THESE OUTSTANDING M.A.P. FEATURES:

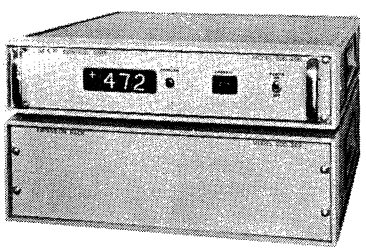
- ☐ Up to 50% Cost Reduction
- ☐ Honest 140 db Wideband CMR
- ☐ Useable, 1000 Volt Isolation
- ☐ Fully Guarded System
- ☐ Less than .2 Microvolts/°C Zero Stability
- ☐ Infinite Rejection of AC Line Noise
- ☐ 10-10,000 Channel/sec Scan Rates
- ☐ 5 Microvolts/Bit Resolution
- ☐ True Ratiometric Operation with Bridge Transducers



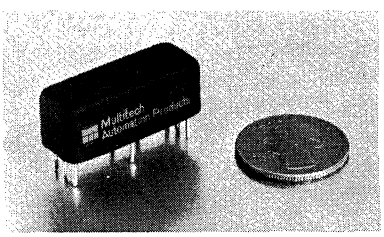
Model 316/and 3520 Integrating A/D Converters
10MV to 1000V F.S. input
Programmable gain select
1000 Megohm input impedance
Less than 1 nanoamp input current
12 or 15 bit binary output



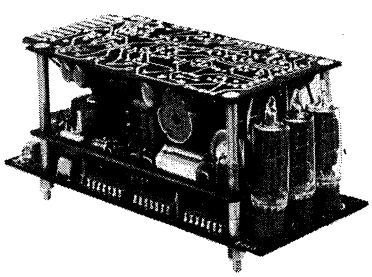
Model 1028 Low Level, 3 Wire Multiplexers
Low cost per channel
3 μVolt maximum channel-to-channel offset error
1000 V isolation between analog input and digital circuits
200 Channels/Second commutation rates
Sequential or Random access



200 System-A/D Converter/Channel
Low per channel cost
Expandable to 1000 Channels
1000 Volt Channel-to-Channel Isolation
10,000 Channels/Second (1000 Channels)
Computer compatible output



Model 180, 3 pole, single throw relay
1 Microvolt maximum thermal offset (100% duty cycle)
0.01 pF capacitance between contacts and coil
Integral magnetic/shielding for close packing
1 Billion operations in dry circuits



Models 2020, 3020 Digital Panel Meters
Smallest Front Panel area (1.9 x 2.2 for 3½ digit).
2½, 3 and 3½ Digits standard
Resolution to 100 μVolt
White light source for high visibility
High update rate of 10/second with no flicker
Gold contacts for high reliability

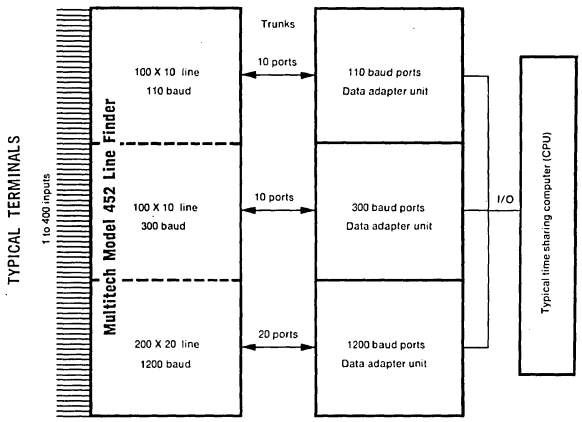
Multitech Automation Products has specialized in the design and manufacture of high reliability low level data acquisition and control systems and system modules capable of extracting laboratory quality data from heretofore impossible noisy industrial environments — and at low cost. We invite you to call or write for our informative technical booklet entitled, "MAP — A NEW ECONOMICAL, FLEXIBLE APPROACH TO ANALOG TO DIGITAL CONVERSION."

a MULTITECH company

Multitech Automation Products

583 Monterey Pass Road, Monterey Park
California 91754 Telephone: (213) 283-7773

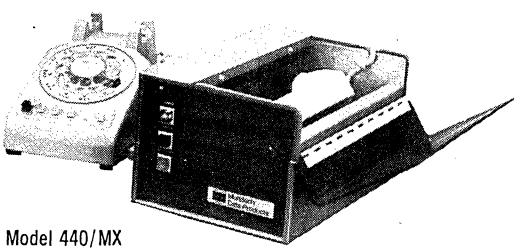
Multitech Data Products



Multitech Data Products (a Multitech Company) designs and manufactures digital data transmission and receiving equipment including Data/TTY, modems, data sets, acoustic couplers, high speed isolation keying distribution systems, input/output converters, switch selectors, electronic line finders, computer port finders, line concentrators, line matching and termination units.

MODEL 452 ELECTRONIC LINE FINDER (PORT FINDER)

Multitech Data Products model 452 Electronic Line Finder will hardwire switch **any** computer terminal, TTY, 2741, etc., that demands service, to an available port into the computer.
An electronic system rather than the usual relay system results in a reliability several orders of magnitude greater than all other systems. Relay and relay contact problems are entirely eliminated from control circuits. Standard configurations are 10 ports by 100 lines, 20 x 200, 10 x 200 and 20 x 100. Options are available.



Model 440/MX

ACOUSTIC COUPLERS

Will accommodate models 28, 33, 35 and 37 teletypewriters, IBM "Selectric," type 2741 Terminals and other equipment with EIA standard RS-232-B or C interface over standard telephone lines.

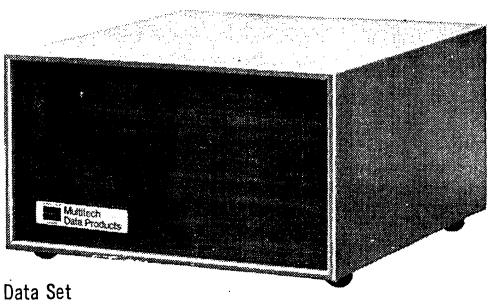
Certain models will interface with CRT displays operating at 1800 baud, other models are designed to be compatible with the "Videojet" and "Inktronic" Printers operating up to 1200 baud.

Model 440/MQ 600/600 baud
Standard EIA RS-232 interface options Rx 600 baud Tx 600 baud.
$449.00

Model 440/MR 1200/150 baud
Accommodates CRT terminals, Inktronic Printers and other high speed equipment with EIA specification interface rates up to and including 1200 baud Rx/150 baud Tx.
$649.00

Model 440/MX 1200/1200 baud
Capable of transmitting and/or receiving at speeds up to and including 1200 baud, make possible a remote, high speed CRT terminal that is completely portable. Rx 1200 baud, Tx 1200 baud. (5 baud supervisory.)
$1025.00

Model 440/MS 1800 baud
Super high speed reception is compatible with CRT's A.B. Dick, " Video Jet Set" & "Inktronic Printers" or other high speed displays over standard telephone lines. Assures you of continued usefulness as the state-of-the-art advances.
$825.00



Data Set

DATA TTY MODEMS

Data speeds from DC to 600 baud. Transmit and receive frequencies in accordance with CCITT recommendations or MIL-STD-188B Electronic Hybrid Circuits.
All modems identical except for plug-in frequency determining networks.

Model 402/PD Terminal Unit
Houses 2 LMU and 8 Modems. Provides all necessary interwiring, rectified and filtered power (unregulated) and cooling air, if required. Model 402/PE supplies power and houses 10 Modems, as an expansion unit.

Model 404/PL Data/TTY Modem
Data transmission is through FSK (Frequency Shift Keying) techniques. Crystal controlled transmitter for high stability, with filtered output. Data demodulation is accomplished with a digital quadrature detector. Status indicator for necessary field adjustments and test points are on front panel.
Standard CCITT frequency allocation.

Model 406/PD Line Matching Unit (LMU)
Provides all necessary circuits to interface with telephone lines or with carrier equipment. 600/900 ohm balanced input and output. Mixes transmit tones from up to 24 modems for line transmission. Drives as many as 24 modems. Transmit level strappable, —12 to 0 dbm. Receive level gives full limiting at —37 dbm, tolerates up to +6 dbm. Can be wired to operate into either a single line, or a duplex pair.

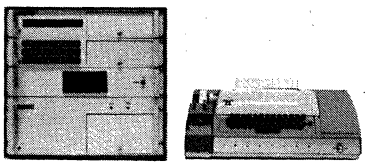
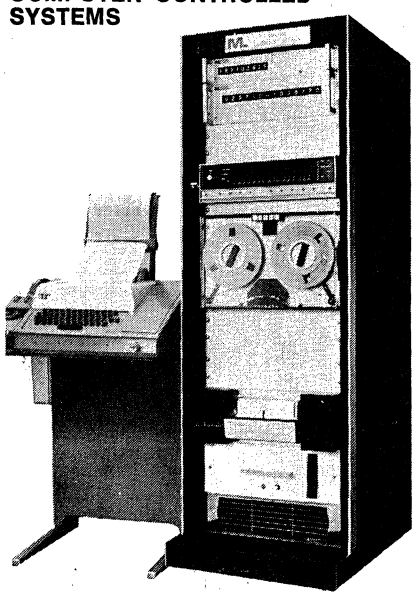
ML DATA SYSTEMS AND COMPONENTS
monitor labs, inc.

DATA LOGGERS



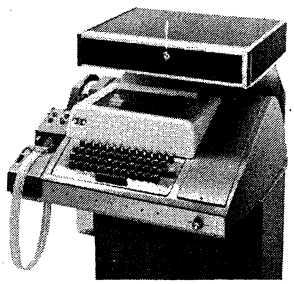
Series 10021 data loggers scan, digitize and record up to 200 input channels. Use of Model 4200 data coupler allows recording on typewriters, magnetic tape recorders, teleprinters, and paper tape punches. In addition, real or elapsed time counting is available for automatic start up and recording.

COMPUTER CONTROLLED SYSTEMS



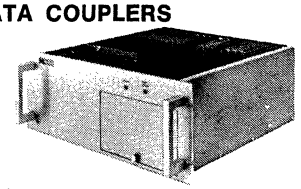
Series 10030 computer controlled systems use mini-computers to program system operation, calculate and convert data, generate control signals, alarms, etc. This flexible series is ideally suited wherever data acquisition, analysis and control are involved.

TELEPRINTING DATA LOGGERS



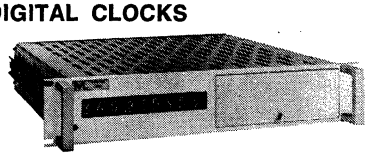
Series 7100 data loggers offer programmable scanning, digitizing, counting and time recording in a compact, single unit. Employing a Teletype 33 ASR, this series can also be used as a time share terminal.

DATA COUPLERS



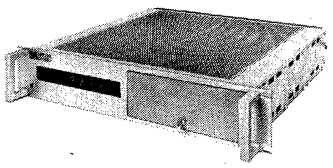
Model 4200 couples up to 100 parallel input characters to one or more output devices, such as paper tape punches, teleprinters, magnetic tape transports, etc. Parallel data can be retransmitted to drive a data printer. Two serial input devices, each with its own code, can be driven simultaneously. Input and output devices are changed by simply plugging in the appropriate card.

DIGITAL CLOCKS



Series 3100 digital clocks offer 4, 6, 7, 8 and 9 digit real or elapsed timekeeping with day or year (or month), hours, minutes and seconds. Clocks offer over 63 selectable output time intervals for automatic starting of systems or processes. Crystal time bases and output storage are available options.

ANALOG SCANNERS



Model 1100 and 1200 offer inputs of 10 to 10,000 channels, employing relay and/or crossbar switching with remote address capability. Other features include thumbwheel and pushbutton channel selection, output programming, speeds to 400 channels per second, and resolutions to 1μv.

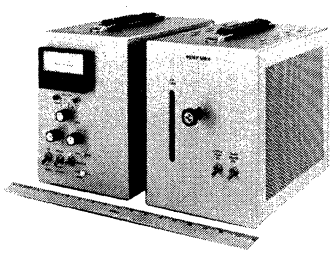
DATA PRINTERS

Series 5100 data printers offer from 7 to 21 columns of numeric and alphanumeric printout at speeds of up to 10 lines per second.

DIGITIZERS

Series 2100 digitizers offer 4 or 5 digit capability with true bi-directional (up/down) counting with input integration time of 16⅔ ms to 10 seconds. Full input/output isolation is standard.

AIR POLLUTION MONITORING



Series 8100 Air Pollution Analyzers are a group of instrument modules employing accepted wet chemical techniques which incorporate all of the features required for accurate, reliable air monitors at central and remote locations. They are designed to be compatible with the most advanced automatic data acquisition system techniques used in continuous remote monitoring.

ML CAPABILITY

Monitor Labs engineers have broad based experience in the design and manufacture of complete data acquisition systems and system components. Monitor Labs Manufacturing team produces modern, dependable equipment subject to a rigid quality control program.

Standard off-the-shelf components are used in the design and manufacture of the systems, including computer based versions. Located in modern facilities in San Diego, California and Rockville, Maryland, ML provides complete system design, integration, installation, customer training and service.

Call today for comprehensive literature and applications information.

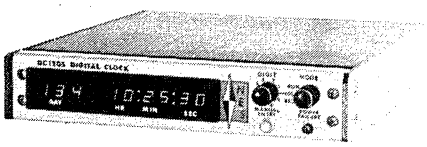
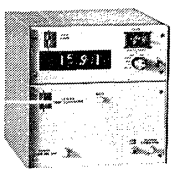
DC 1205
Half-rack size



Optional clock package

DATA LOGGERS



A

K

Compact, low cost, data acquisition unit. Accepts a 10 digit BCD (40 bit) input, and converts the data to a serial ASCII output code for driving teletypewriters. The data printout is formatted into seven 10 character words per line. The input lines to the storage memory are buffered; a logic "1" is from 2v to 80v. Switch selected positive or negative true logic signals. Switchable even or odd parity. Isolated (10^{10} Ohms) constant-current output. Many options available. **Price: $845**

DIGITAL CLOCKS

Clock, calendar, timer, and power supply can all be contained in a 1¾" high x 8⅝" wide x 9½" deep cabinet. LED readout has various ranges: 23:59:59, 12:59:59, 23:59.99, 12:59.99, 23.999, 12.999. Frequency standard of 50Hz, 60Hz, or internal 1MHz. Digit-by-digit time setting. Calendar option: 1-365 or automatic month and day. Various packaging configurations, and options. **Price: clock card $195; clock, 6 digit LED display, and power supply $585**

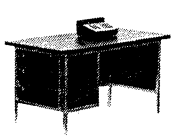
I



H

- **A** **CC1200-SP4** Analog input data loggers. By combining various A to D converters with the time proven CC1200 data logger, virtually any analog function can be recorded on a Teletype Model 33, 35, etc. **Price: $1050 - $1500**
- **B** **P. C. Cards** NES supplies vast amounts and varieties of individual printed circuit cards to OEM users. These include such items as: digital clocks, code converters, tone burst encoding and decoding, TTY drivers, etc. **Prices: from $75, single quantities.**
- **C** **CC1000 Code Converters** A complete line of modular code converters which allows translating any data code to any other. This permits direct communications between "incompatible" equipment, formats, and coding. Also, the CC1000 can be used for security purposes by bastardizing or scrambling a code. **Price: unidirectional $1100 - $1600; bi-directional $1700 - $3000**
- **D** **ETC 1050** Electronic Time Clocks. Attendance reporting systems obsolete old-fashioned card stamping systems. Processes employee time in/out information directly to computer compatible media. Save accounting manpower and reduce errors. Also, allows remote reading of personnel traffic for security control. **Price: $2500 - $4200**
- **E** **Data Acquisition Systems** Complete data acquisition systems on any type of storage media; this includes transducers, scanners, converters, multiplexers, transmission hardware, and storage equipment. **Price: $3500 - $25,000**
- **F** **Remote Data Entry Stations** Permits various input data, identification codes, and manipulation to be remote controlled at outlying stations of a computer system. **Price: $425 - $750**
- **G** **Versa-Trol Systems** Remote control systems for wire line, radio, and microwave carriers uses tone, tone combinations, and digitized tone techniques for dependable operation. Speech plus capability permits voice communications over the same carrier. **Price: from $925**
- **H** **Automation Computers** Process control computers which allow real time manipulation and decision making. Typical memory capacities of 4K x 12, 8K x 12 with stringing options. **Price: $8500 - $20,000**
- **I** **100-1400 Assembly** Finished card file/power supply package. One half rack 12-position file with I.C. regulated 5 VDC 2.5 A., overvoltage and short circuit protected power supply. Other voltage(s) available. **Price: $225**
- **J** **Control Units** Custom-fitted control panels for process control computers or data acquisition systems. Allows the elimination of written programs (software), because hard-wired systems and nomenclature are fitted for a particular industry.
- **K** **Accumulator/Time Logger** Digital clocks which allow the recording of real or elapse time on paper tape, magnetic tape, cards, etc. Also, by using the clock card as a pulse accumulator instead of for real time, the accumulator contents may be logged. **Price: $915 - $1200**
- **L** **LED Display** Add-on LED Display, 2 to 12 digits. Fasten to front panel of equipment. Only 1" deep.

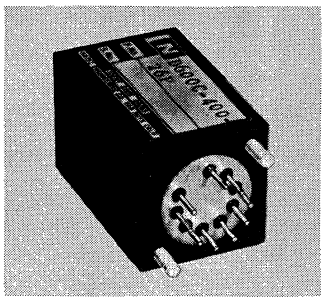
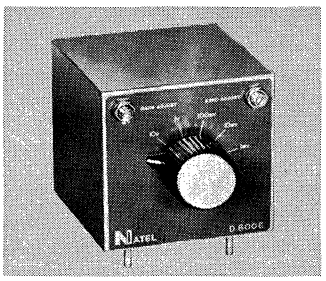
A NEI COMPANY



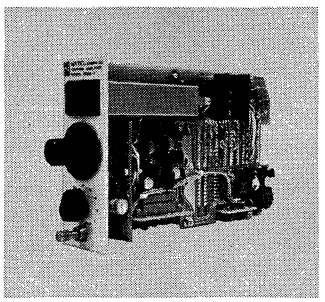
ϕ Sensitive Demodulator!

The D500 or D600 series phase-sensitive demodulator provides AC to DC conversion with accuracies not normally found in *higher priced* units. Featuring MTBF of 500,000 hours, the units operate trouble-free through dozens of programs.



Phase Sensitive Amplifier-Demodulators MODELS D6006, D7006, D8006

The D6006 series phase sensitive amplifier-demodulators convert low level suppressed carrier AC input signals to linearly proportional high level DC output voltage. Amp-Demods are designed for airborne and ground instrumentation to operate sub-carrier oscillators, meters, galvanometers, or other types of control applications. Both single-range or multi-range models are available from stock.

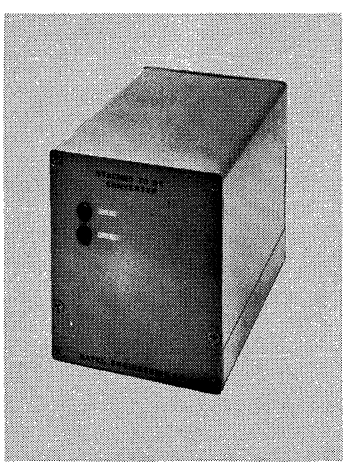


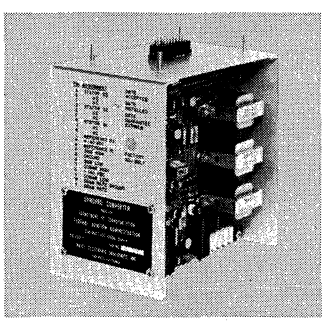
MODEL 2086

This carrier-amplifier system uses a carrier frequency of 150K Hz to provide a frequency response of 40K Hz. The system incorporates a "Foolproof" set-up procedure by means of a graphic instruction procedure displayed on the front panel. Only the adjustment to be accomplished is accessible to the operator. Model 2088 incorporates all the characteristics of Model 2088.

SYNCHRO TO LINEAR DC CONVERTER MODEL 406

An all solid-state synchro converter which provides a linear DC voltage output proportional to an AC shaft angle input. Model 406 can be ordered to interface with any standard or non-standard synchro input. Available options include a variable zero offset capability; small angle amplification; internal power supply; or multiplexing capabilities. Accuracy of the 406 is ±6 minutes of arc.





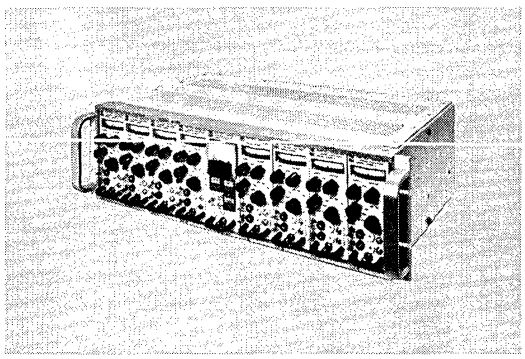
MODEL 431

A synchro input becomes a sine/cosine signal without the dynamic errors encountered in electro-mechanical systems. The accuracy tolerance remains ±6 min. even when the synchro excitation voltage varies ±10%. Models are available for all standard or non-standard synchro and/or resolver inputs.

NATEL ENGINEERING COMPANY, 8944 Mason Avenue, Canoga Park, California 91306 (213) 882-9620

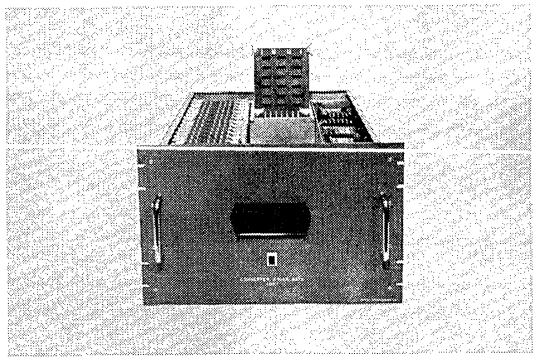
ELECTRONICS FOR ENGINEERING MEASUREMENTS

Signal conditioning systems
Signal conditioning modules
Synchro converters



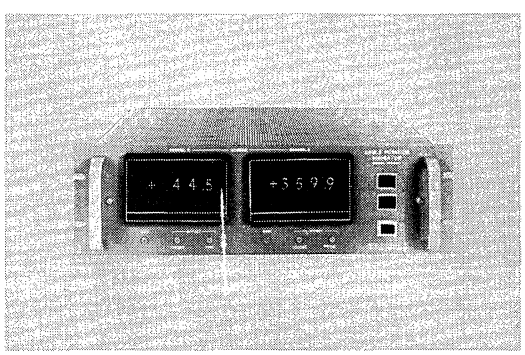
SYSTEM "N"
MODEL 2088

A carrier amplifier system designed for use with cable-connected transducers remotely located as far as two miles from the conditioning system. "UNIVECTOR" 360° phase shift adjustment offsets any possible phase shift error due to line length, and AC type conditioning provides improved signal and noise characteristics.



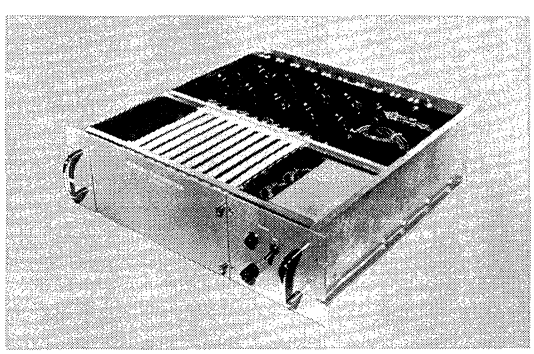
MODEL 2067

A Multi-plexed synchro to digital converter system. Conversion speed is equal to 200 usec and each channel can be read automatically on the front panel mounted digital readout. Synchros can be intermixed according to customer requirements. Available configurations range from 6-channel synchro or resolver input to 52-channel synchro to digital, as pictured. These systems can be specified for sequential sampling or remote channel select. Contact factory for details.



ANGLE-POSITION INDICATORS
MODEL 2S4061

A dual-channel synchro angle position indicator. Monitors constantly azimuth and elevation information from antenna or launch pedestals. Accurate to ±6 minutes. The indicator includes a capability for 0 to 360° zero shift adjustment. Single channel configuration also available.



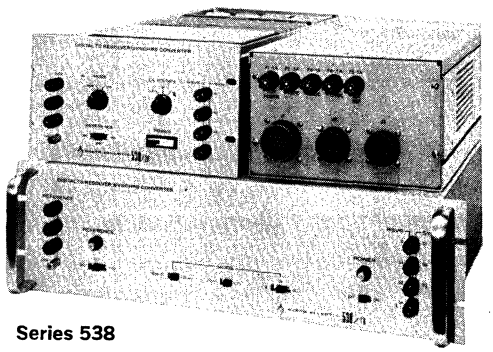
SOLID-STATE SYNCHRO TRANSMITTER
MODEL 2066

A multi-channel DC or sine/cosine to synchro converter, designed for use in simulator or other type control systems. Model 2066 provides a 3-wire synchro or 4-wire resolver output accurate within .05% of the analog inputs. Models are available providing all standard or non-standard synchro or resolver output voltages and can be intermixed at customer option.

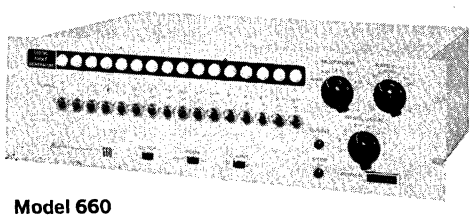
NATEL ENGINEERING COMPANY, 8944 Mason Avenue, Canoga Park, California 91306 (213) 882-9620

PRECISION DIGITAL-TO-RESOLVER/SYNCHRO AND RESOLVER/SYNCHRO-

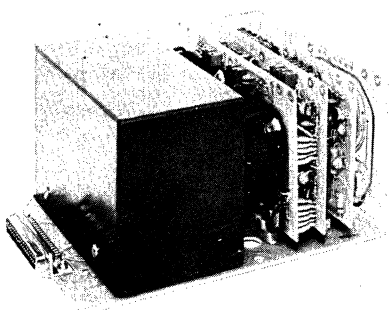
NORTH ATLANTIC *industries, inc.*



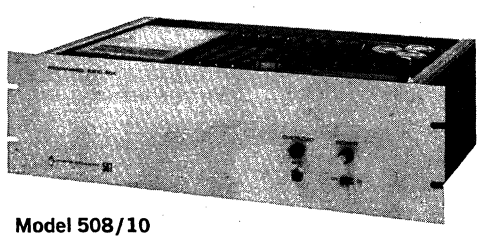
Series 538



Model 660



Series 701



Model 508/10

Digital To Resolver/Synchro Converters

These units provide a complete high-speed interface from digital to analog systems, enabling precise simulation of resolver/synchro data. All converters feature semi-conductors, integrated circuits, precision trigonometric transformers, and precision resistor networks. Basic models use 400Hz as the signal data frequency, with optional operation at other frequencies from 60Hz to 10KHz. A variety of system-oriented options are available in each model, and multi-speed or multi-channel systems can be provided.

Series 538 — Digital-to-Resolver/Synchro Converters

The Series 538 D/R-S Converters offer 9- to 17-bit single-speed resolution with digital input as binary angle. The input register is strobed and the digital data is then held until the next strobe. The internal logic selects the appropriate trigonometric transformer taps, thus simulating actual 4-wire resolver or 3-wire synchro data at the selected line-line voltage. Built-in protection circuits are provided for power-line voltage and frequency transients, over-load and short-circuit. The Model 538/30 provides 9- to 13-bit resolution with 6-minute accuracy and the Models 538/10 (full-rack) and 538/20 (half-rack) converters provide 14- to 17-bit resolution with better than 1-minute accuracy. Series 536 D/R Converters and Series 537 D/S Converters are also available as single-mode units.

Model 660 — Digital Angle Generator

The Model 660 Digital Angle Generator provides digital angle input data and data strobe signals to the Series 538 D/R-S Converters. Useful in semi-automatic test system applications, static data angles and angular data rates from 1 arc-minute/second to 2000°/second can be generated from an internal or an external clock.

Series 701 Digital-To-Synchro Converter Card Sets

The 701 D/S converters are designed for use as components in digital systems. Featuring maintainable plug-in circuit boards and a mother board assembly, all card sets are provided with transformer output isolation. The 701 Card Sets are offered in 8- to 11-bit resolution with 9-bit accuracy, and in 11- to 13-bit resolution with 12-bit accuracy. Features also include 11.8V, 26V, or 90V output at 60Hz or 400Hz and output power of 1VA or 10VA. Optionally available is 13-bit accuracy and resolver output.

Digital-To-AC-Converters

Model 508/10 — Digital-to-AC Converter

In automatic test systems, this solid-state-switched, AC ratiometric converter can be directly programmed from a punched card reader, a paper tape reader, or a digital computer. Featuring BCD digital data input with 10-microsecond data acceptance, the Model 508/10 400Hz D/AC Converter has a ratio of zero to unity with 4- or 5-decade (BCD) resolution, is accurate to .005% (50 ppm), and includes full inversion. Also available is the Model 508/11, which accepts a pulse train input and provides an AC ramp output.

Resolver/Synchro To Digital Converters

These converters provide a complete high-speed interface from analog to digital systems through continuous conversion of analog resolver and synchro data into digital data at angular velocities up to 20,000°/sec. High-speed continuous tracking is achieved through use of a unique electronic servo technique which provides velocity constants to 200,000 sec^{-1} and eliminates any data staleness errors. These 400Hz converters fea-

TO-DIGITAL COMPUTER-INTERFACE, AND ATE EQUIPMENT.

ture semiconductors, integrated circuits, precision trigonometric transformers and resistive ladder networks. A wide selection of application-oriented options including operation at other frequencies. Multi-speed and multi-channel systems are also available.

Model 545 — Automatic Angle Position Indicator

This instrument has .001° resolution and 10-second accuracy for all line-to-line voltages from 11.8 to 90V at 400Hz. The digital angle is both displayed and available in BCD format at the rear connectors. Remote or front-panel selection of resolver or synchro input, line-line voltage range and operating mode. Operating modes are tracking at 2000°/sec with K_v 200,000 sec^{-1}, 100ms track sequence upon command then hold, and repetitive track/hold sequences. Optional signal frequency 60Hz.

Model 545/100 — Automatic Angle Position Indicator

Similar to the Model 545 in overall function, but provided with .01° accuracy and resolution. This instrument accepts both 60 & 400Hz resolver and synchro data, and tracks data at 20,000°/sec.

Model 546/20 Binary S/D Converter

This half-rack R-S/D Converter features 16-bit resolution and 15-bit accuracy for 400 Hz resolvers and synchros at all line-to-line voltages from 11.8 to 90 V. The binary display is useful for system integration. Front-panel selection of resolver or synchro input, and line-line voltage range. The unit continuously tracks input data, and its output is always available for computer use. Optional special signal frequencies, multiplexed and multi-speed units.

Model API-8025 — Angle Position Indicator

High-speed performance 400Hz servo for field test and production test measurement of synchro and resolver transmitters. The half-rack API-8025 provides accuracy of 6 arc-minutes, repeatability of 30 arc-seconds, and slew speed of 25°/second with a digital readout display. Optional retransmit components, dual-mode, and two-speed operation.

Model 8525 — Angle Position Indicator

The Model 8525 offers 3-minute accuracy and .01° resolution, and can be supplied directly interchangeable with the Model API-8025 without any change in panel cutout or wiring. The Model 8525, with 5-decade BCD digital output and a data tracking speed of 1000°/second, is available as a two-channel instrument for any combination of synchro and/or resolver inputs at 11.8V, 26V, or 90V line-line 60Hz or 400Hz. Push-button channel selection automatically sets the line-line level, resolver or synchro input configuration, and also selects the correct rear connector terminals.

Series 711 Synchro-To-Digital Converter Card Sets

The 711 S/D converters offer .05° accuracy and 13-bit resolution with input transformer isolation, and are designed for integration into digital systems. The 711 Card Set will accept 11.8V, 26V, or 90V resolver or synchro inputs with a reference of 26V or 115V 400Hz. A Data Freeze line is provided to hold the conversion process during data transfer or test. External power is required for the 3 circuit boards and the associated mother board assembly.

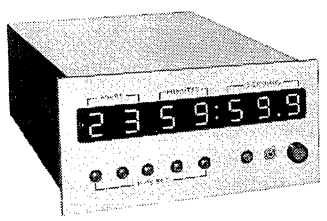
Norden DIVISION OF UNITED AIRCRAFT CORPORATION

PARABAM

DIGITAL CLOCKS
SOLID STATE—ELECTROMECHANICAL

For computers, data logging, missile launch count-down display and control. Multi-channel digital time programming for control of automatic processing and radio/TV broadcasts. Variety of logic outputs compatible with most data readout devices. Single or multiple remote glow-tube or projection-type time displays.



SOLID STATE CLOCKS

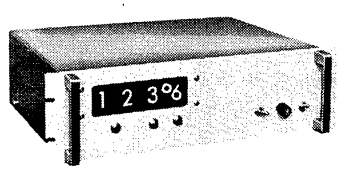
For countdown and/or elapsed time, time-of-day. Combined calendars provide day-of-year or month-day. Various time bases, time data output formats and displays available.

From $299.00

features:

- Integrated circuits used for basic logic.
- Front panel display Seven Bar Nixie or projection type.
- Logic output compatible with standard recording devices.
- Options: Battery operation, variety of time bases, variety of time ranges, multiple display.

Write for Tech. Bulletin No. 470-33



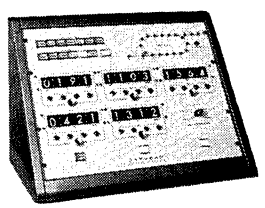
ELECTROMECHANICAL DIGITAL CLOCKS

Time resolution down to one second. Single or multiple isolated contact closure outputs in 10-line decimal, teletype code, and/or any BCD format. Wide choice of number and type of time displays.

features:

- Time Synchronized to line frequency or external pulse input.
- Countdown/elapsed time or real time.
- Outputs interface readily with digital systems.
- Special time-controlled pulse closures available.

Write for Tech. Bulletin No. 1066-27



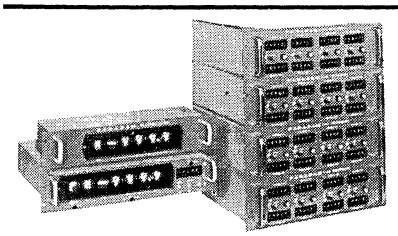
AUTOMATIC RACE TRACK TIMING SYSTEMS

Automatically measures and displays the precise quarter mile times and finish time for all types of races and for all race distances. Designed for operation by non-technical personnel.

features:

- All solid state electronics.
- For track, turf, and harness races.
- Output drives two tote board display units.
- Automatically programs photocells for selected race distances.

WRITE FOR DESCRIPTIVE LITERATURE



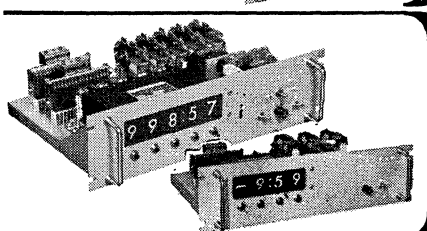
DIGITAL TIME PROGRAMMERS

Standard units accept time data inputs from solid state or electro-mechanical digital clocks and provide any number of precisely timed signal outputs as pre-selected by the wiring of one or more program plugs.

features:

- Programmed time interval accuracy well within the clock resolution.
- Display of output channel numbers and status available.
- Complete program changed in seconds by replacing program plugs.

Write for Tech Bulletin No. 566-24



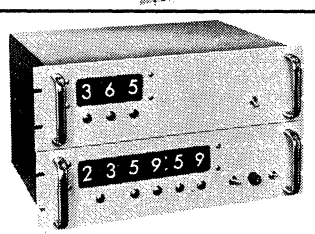
COUNT/DOWN, COUNT/UP DIGITAL CLOCKS

Used in missile launch, testing, radio-television — anywhere time is counted down, then afterward elapsed time is observed.

features:

- Available with digital logic output or for programming and recording.
- Plus/minus count in most time ranges and resolutions.
- Projection type or Nixie displays.
- Standard system operates up to 40 displays.

Write for Tech. Bulletin No. 162-16A



DIGITAL CALENDARS

Provide nonambiguous contact closures in parallel form corresponding to date in Month-Days (months from 01 to 12, days from 01 to 31) or Day-of-the-Year (from 001 to 365). Used in data logging, process control or other date of time oriented systems.

features:

- May be ordered in Month-Day or Day-of-Year Models.
- Outputs in decimal or various codes of binary coded decimal.
- Projection type or Nixie displays.
- Switch for leap year correction.

Write for Tech. Bulletin No. 1066-29

$61.00

DIGITAL CLOCK

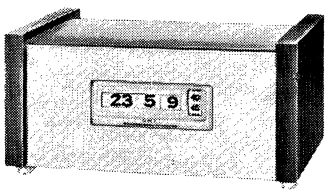
12 and 24 hour 6 digit read out . . . minutes, 10 minutes and hours. Rotating visual 1 RPM calibrated seconds drum. 4½"h, 6"w, 3¼"d. Wt. 3½ lbs. Black metal dustproof case.

#160-12H ..... 12 Hour
#161-24H ..... 24 Hour

24-HOUR DIGITAL READ OUT CLOCK

Calculates time automatically. Stainless steel case with walnut wood ends. 3⅞"h, 7¾"w, 3¾"d. Wt. 3 lbs. 110V 60 Cy. AC.

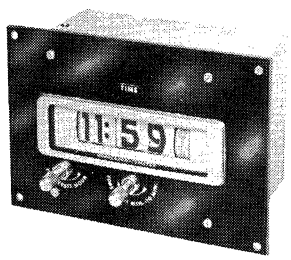
#920-24 Hour $28.50
#920-12 Hour $25.00

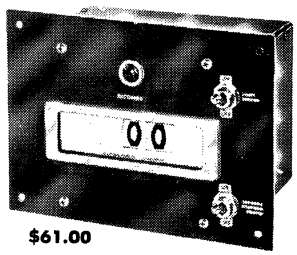


DIGITAL CLOCK

12 and 24 hour read out . . . minutes, 10 minutes and hours. Rotating 1 RPM seconds wheel in visual 5 second increments. Completely enclosed black metal dust-proof case. 3½"h, 5½"w, 3¼"d. Wt. 3½ lbs.

#140-12H — 12 Hour.... $39.50
#141-24H — 24 Hour.... $39.50



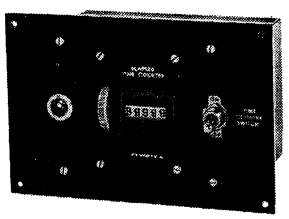


$61.00

ELAPSED TIME DIGITAL COMPUTER

Second by second 2 digit read out . . . 00-59. Automatically calculates and registers elapsed time in seconds. 4"h, 6"w, 3¼"d. Wt. 3½ lbs. Black metal dustproof case. Stop and Hold Control. Count down or count up.

#10-60S ..... 60 Seconds



ELAPSED TIME COUNTER

Digits resettable individually. Stop and Hold Control. Time Control switch. Black metal dustproof case. 3½" h, 5½" w, 3¼" d. Wt. 3½ lbs.

RANGES:

Hours ..... 99,999 hours
Hours, and tenths of hours ..... 9,999.9 hours
Minutes ..... 99,999 minutes
Minutes, and tenths of minutes ..... 9,999.9 minutes

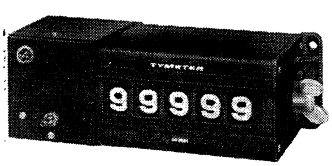
#120 ..... $41.00

#96—LARGE FIGURE COUNTER....$92.50

Digits ¾" high, 19/32" wide. Digits resettable. Stop and Hold Control. 10½" w, 3½" h, 4½" d. Wt. 5½ lbs.

RANGES:

Seconds ..... 99,999 seconds
Tenths of minutes 9,999.9 minutes
Minutes ..... 99,999 minutes
Tenths of Hours..... 9,999.9 Hours ..... 99,999 hours

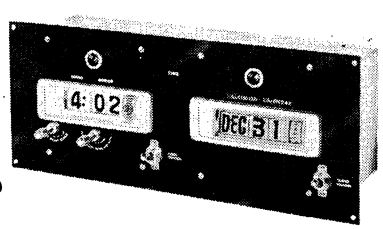


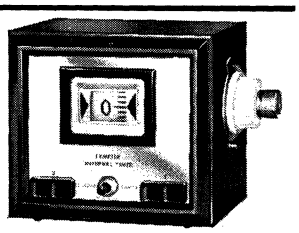
CALCHRON CALENDAR and *TYMETER DIGITAL CLOCK

Digits resettable individually. Black metal dustproof case, 4½" h, 12" w, 3½" d. Wt. 6 lbs.

* #125-12H — 12 Hour
* #125-24H — 24 Hour

#125 ..... $127.50





DIGITAL TIMER for All-Purpose Laboratory & Industrial TEST TIMING

Adjustable reset stop to enable rapid repeat timing. Closes load circuit during OR after a preset interval. Buzzer sounds at end of interval. 120V 60 cy. AC. Ranges available: 57 seconds by seconds, 57 minutes by minutes, 11.5 hours by ¼ hours, 23 hours by ½ hours, 57 hours by hours. 5"h, 5½"w, 3½"d. Wt. 3½ lbs.

#90 ..... $27.50

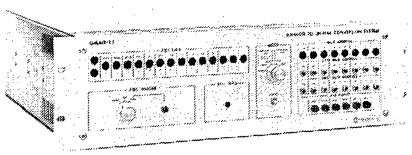
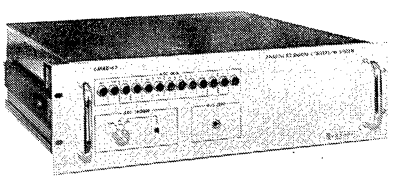
ANALOG TO DIGITAL CONVERTERS



GMAD1
A/D CONVERTER
SYSTEM

Preston Scientific's versatile GM Series analog-to-digital converters offer the "World's Fastest A/D Converter" incorporated into a flexible systems oriented concept providing these outstanding features:

- Accuracy up to 0.01% over a temperature range from 0° to +50°C
- Multiplexing (single-ended or differential) with up to 112 channels built into the same 5¼ inch chassis with A/D converter and power supply
- Digital-to-Analog Converters, 15 bit resolution, 300 kHz data rates, with optional four quadrant multiplying and 100 volt output features
- Total conversion time for sign plus 14 binary bits is less than 1.5 microseconds
- Sample-and-Hold Apertures of less than 10 nanoseconds with optional multi-channel simultaneous configurations



GMAD01
A/D CONVERTER

SPECIFICATIONS, ANALOG-TO-DIGITAL CONVERTER

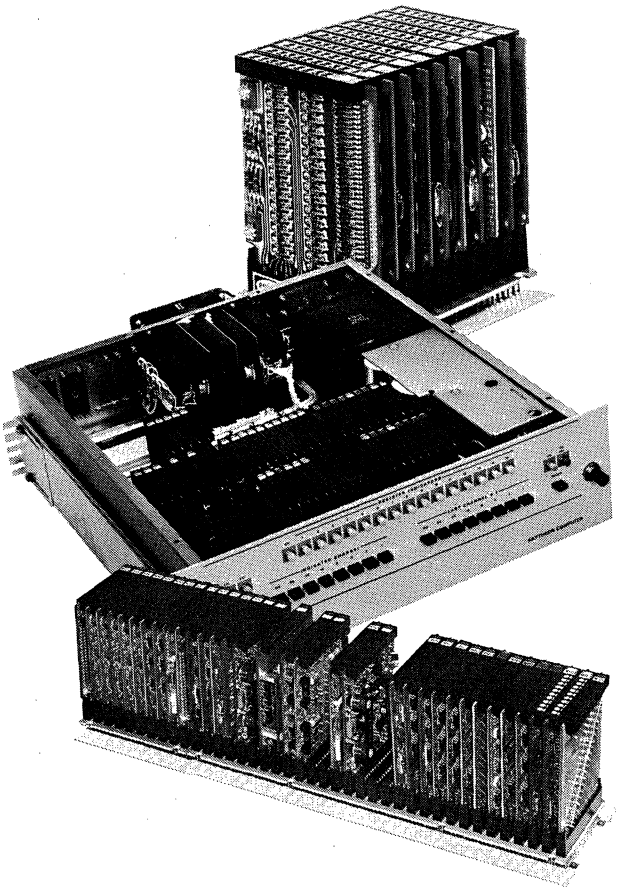
Analog-To-Digital Conversion Equipment



Raytheon Computer builds an extensive line of analog-to-digital conversion equipment, including basic ADC's, multiplexing ADC's, simultaneous sample-and-hold equipment, and multiplexing equipment. This equipment is available in single or multiple channels and in a variety of physical configurations *completely wired, tested, and documented.* Resolution is available in 10-bit, 12-bit, 14-bit, and 15-bit binary, and in 3-digit BCD.

Multiplexing ADC Raytheon Computer multiplexing ADC's (Miniverters™) feature a MOS-FET multiplexer, a sample-and-hold amplifier, and an A/D converter in a single chassis. A variety of options in packaging, speed and performance is available. The units are supplied fully wired and tested in connector block assemblies or case-mounted.

The 15-bit unit, referred to as the Multiverter III®, features 100KHz throughput and low power consumption. The high-performance ADC has an accuracy of 0.01%. It's all contained in less than 200 cubic inches. The unit is available in a connector block or case-mounted with front panel controls and indicators.

Basic ADC For convenience and versatility, Raytheon Computer offers basic A/D converters supplied fully wired and tested in connector blocks or case-mounted. The low-cost converters feature high packing density and are extremely flexible when used as building blocks in conversion systems.

Simultaneous Sample-and-Hold This equipment is available with up to 8 channels of medium or high performance sample-and-hold amplifiers in a single connector block. Standard input range is ±10 volts full scale.

Multiplexing Up to 48 channels of multiplexing and control is available in a fully wired and tested single connector block. This unit is ideally suited for expansion of your conversion equipment.

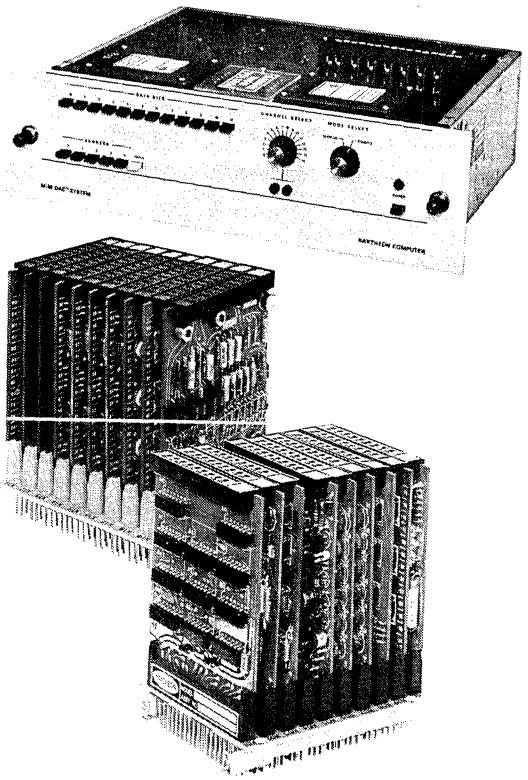
RAYTHEON

Digital-To-Analog Conversion Equipment



Digital-to-Analog Converters. Digital-to-analog conversion equipment is available from Raytheon Computer in a wide range of configurations and types. Resolution of 10 and 12-bits binary is provided. (Consult the factory for availability of 14 and 15-bit resolution.) Capacities range from single channel DAC's contained on 2 printed circuit cards to up to 48 channels rack mounted with front panel controls and indicators. The units are all high speed, low cost DAC's with high packing density.

The rack mounted configurations (standard 19-inch Retma) are fully assembled, *wired and tested,* and contain the necessary drive and storage electronics. They also offer several options such as front panel controls, computer interface and power supplies. Up to four channels of D/A conversion can be provided fully wired and tested in a connector block assembly. These units include input storage register, output operational amplifiers, reference supplies and data and address drivers.

Analog Data Distributor. Raytheon Computer offers a low-cost Analog Data Distributor consisting of a 12-bit DAC, a high current driving amplifier, up to 64 analog output sample-and-hold amplifiers and all the necessary power supplies and controls. The system accepts digital information from a computer, along with address information, converts the data into equivalent analog form and distributes it to the selected output holding amplifier. The overall system is comprised of an analog data distributor master drawer and additional distributor slave drawers.

M-SERIES IC DIGITAL AND ANALOG MODULES

With Raytheon Computer's new M-Series Integrated Circuit Digital Modules, the digital designer has for the first time a true module system, not just a line of circuits. The modules themselves, the connectors, cases, power supplies, and power distribution scheme have been so thoroughly engineered that the designer can concentrate on his digital data problem, not the mechanical details of putting it together and making it work.

The M-Series logic system offers the user these specific advantages:

1. Complete complement of digital and analog modules, cases, power supplies and accessories. Digital modules available with DTL or TTL Integrated Circuits.
2. Module connectors unitized in groups of 10, 30 or 40 on aluminum plates; eliminates handling and mounting of separate connectors. Mounting plate is used as system ground plane to minimize noise.
3. Power and ground distribution in module cases simplified by use of laminated bus bars. Power wiring errors eliminated and assembly time reduced.
4. Point-to-point wiring minimizes capacitance.
5. Connector and hardware configurations designed for automatic wire wrapping — provide fast system delivery, high reliability, low cost and wiring consistency.
6. MINIVERTER and other analog instruments.

GENERAL SPECIFICATIONS *See catalog SP-230 for complete specifications.*

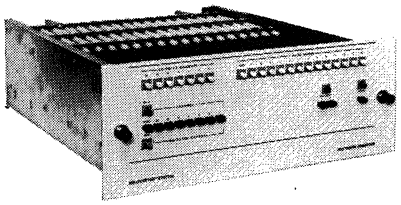
RAYTHEON

Low Level/High Level Data Acquisition System

GENERAL DESCRIPTION OF THE MILLIVERTER™



The Raytheon Computer Milliverter represents the latest advancements in the field of data acquisition. This instrument converts analog signals in the range of 5 millivolts to 10 volts to a digital representation. This conversion process is accomplished at a 40 kilohertz throughput rate while maintaining excellent high frequency noise rejection. These characteristics make theMilliverter an ideal instrument for systems where analog information is to be processed by a digital computer.

In most low level data acquisition systems, noise limits the overall system accuracy. Each low level signal to the Milliverter is conditioned by an instrumentation type amplifier that offers high gain and a 3 pole Butterworth filter. The 3 db frequency of the low pass filter is set at 6 Hz which yields 60 db noise rejection at 60 Hz. Available gains of the amplifiers are 2000, 200 or 20 which allows processing of signals with 5, 50 or 500 millivolts full scale input.

The Milliverter is also designed to convert differential high level analog signals in the ranges of 1, 5 or 10 volts full scale. These high level analog signals are first multiplexed and then conditioned with a high performance differential amplifier.

The amplified low level signals and the high level signals are then multiplexed using FET switches featuring low ON resistance. A high performance sample and hold amplifier then holds the multiplexed analog signal for conversion.

Two analog-to-digital converters are offered with the Milliverter — 12 bit resolution or 14 bit resolution. These converters use the successive approximation method of converting the analog signal to a digital representation.

The entire assembly is mounted in a 19 inch RETMA rack mounting chassis with a 7 inch front panel. The chassis depth is approximately 20 inches and is equipped with quick disconnect slides.

SPECIFICATIONS

ANALOG INPUTS	Low Level	High Level
Channel Capacity	64	96*
Differential Voltage Range	±5 mV ±50 mV ±500 mV	±1 V ±5 V ±10 V
Maximum Differential Voltage (Without damage)	±7.0 V	±20 V
Common Mode Voltage	7.5 V	10.5 V @ 1 VFS 8.5 V @ 5 VFS 6.0 V @ 10 VFS
Maximum Common Mode Voltage (Without damage)	20 V	20 V
Common Mode Rejection (With 1 KΩ source unbalance)		
at DC	100 db	80 db
at 60 Hz	100 db	60 db
Normal Mode Rejection	60 db @ 60 Hz	N/A
Input Impedance	100 MΩ	100 MΩ

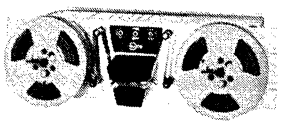
REMEX

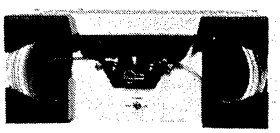
A UNIT OF EX-CELL-O CORPORATION

FOR PERIPHERALS

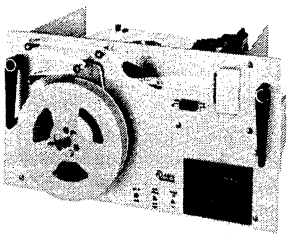
REMEX offers a complete range of peripheral products as follows: Photoelectric Punched Tape Readers, Punched Tape Spoolers, Punched Tape Perforators, Digital Magnetic Tape Cassette Systems, Combinations of the above and is a specialist in the manufacture of input/output equipments for all types of usages.



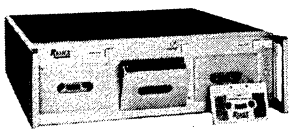
PUNCHED TAPE READER/SPOOLER



PUNCHED TAPE READER



PUNCHED TAPE PERFORATOR/SPOOLER



DIGITAL MAGNETIC TAPE CASSETTE

PHOTOELECTRIC PUNCHED TAPE READERS

REMEX Punched Tape Readers, Spoolers and Reader/Spoolers are available in four standard versions to satisfy any typical application and in many special configurations for customized requirements as follows:

Function	Series RR/RRS 1150	Series RR/RRS 0305	Series RR/RRS 3000	Series RR/RRS 4001
Speed (C.P.S.)	150	100 - 300	100 - 400	300 - 1000
Tape Motion	Bi-Directional	Right	Left, Right and Bi-Directional	Left, Right and Bi-Directional
Tape Stopping	On Character	On Character	On Character	On Character (500)
Inputs/Outputs	DTL/TTL Compatible	DTL/TTL Compatible	DTL/TTL and High Level Compatible	DTL/TTL and High Level Compatible
Transparency (%)	57	40	70	70
Reel Size	4⅝" - 8½"	4⅝" - 5¼"	7½" - 8"	7½" - 10½"
Hub Type	½" or N.A.B.	REMEX	½" or N.A.B.	½" or N.A.B.
Rewind Speed (C.P.S.)	250	350	2000	2500
Other Options	Yes	Yes	Yes	Yes

PUNCHED TAPE PERFORATORS

REMEX Punched Tape Perforators and Perforated Spoolers are available in four standard versions as follows:

Function	Series RPM 0030	Series RPR/RPS 0030	Series RPM 1075	Series RPR/RPS 1075
Form	Mechanism	System	Mechanism	System
Tape Motion	Bi-Directional	Bi-Directional	Bi-Directional	Bi-Directional
Speed (C.P.S.)	30	30	75	75
Input/Output	To Solenoids	DTL/TTL Compatible	To Solenoids	DTL/TTL Compatible
Reel Size	D.N.A.	4⅝" - 8½"	D.N.A.	4⅝" - 8½"
Hub Type	D.N.A.	½" or N.A.B.	D.N.A.	½" or N.A.B.

DIGITAL MAGNETIC TAPE CASSETTE SYSTEMS

REMEX Magnetic Tape Cassette Systems are available in several versions as follows:

Function	Series RCM 0500	Series RCS 0500
Form	Mechanism	System
Cartridge	Philips	Philips

XLO

RENCO OPTICAL ENCODERS

INCREMENTAL | ROTARY | LOW INERTIA
ABSOLUTE | LINEAR | HEAVY DUTY

Renco encoders are the result of many years of experience in producing optical shaft angle encoders for industrial, military and aerospace programs. Renco encoders are produced in a wide variety of sizes and configurations in both absolute and incremental models.

Employing optical techniques to convert shaft angle into a digital format, Renco encoders combine versatility and low cost, without sacrificing quality, performance or reliability.

Renco absolute whole word encoder outputs are furnished in parallel form in cyclic gray code, binary coded decimal or natural binary.

Renco incremental encoders are offered in many combinations of outputs: sine wave, square wave, single track, dual track in phase quadrature for bi-directional counting. Zero reference pulse optional.

Also available are multiplication circuits of 1X, 2X and 4X, all fabricated from solid state electronics and housed within the encoder package.

Renco linear encoders are available in the same combinations of outputs and multiplication circuits featuring high resolution capability.

Renco encoders exhibit high reliability. All are metal in construction, light weight, and are completely field serviceable, with replacement lamps and circuit modules.

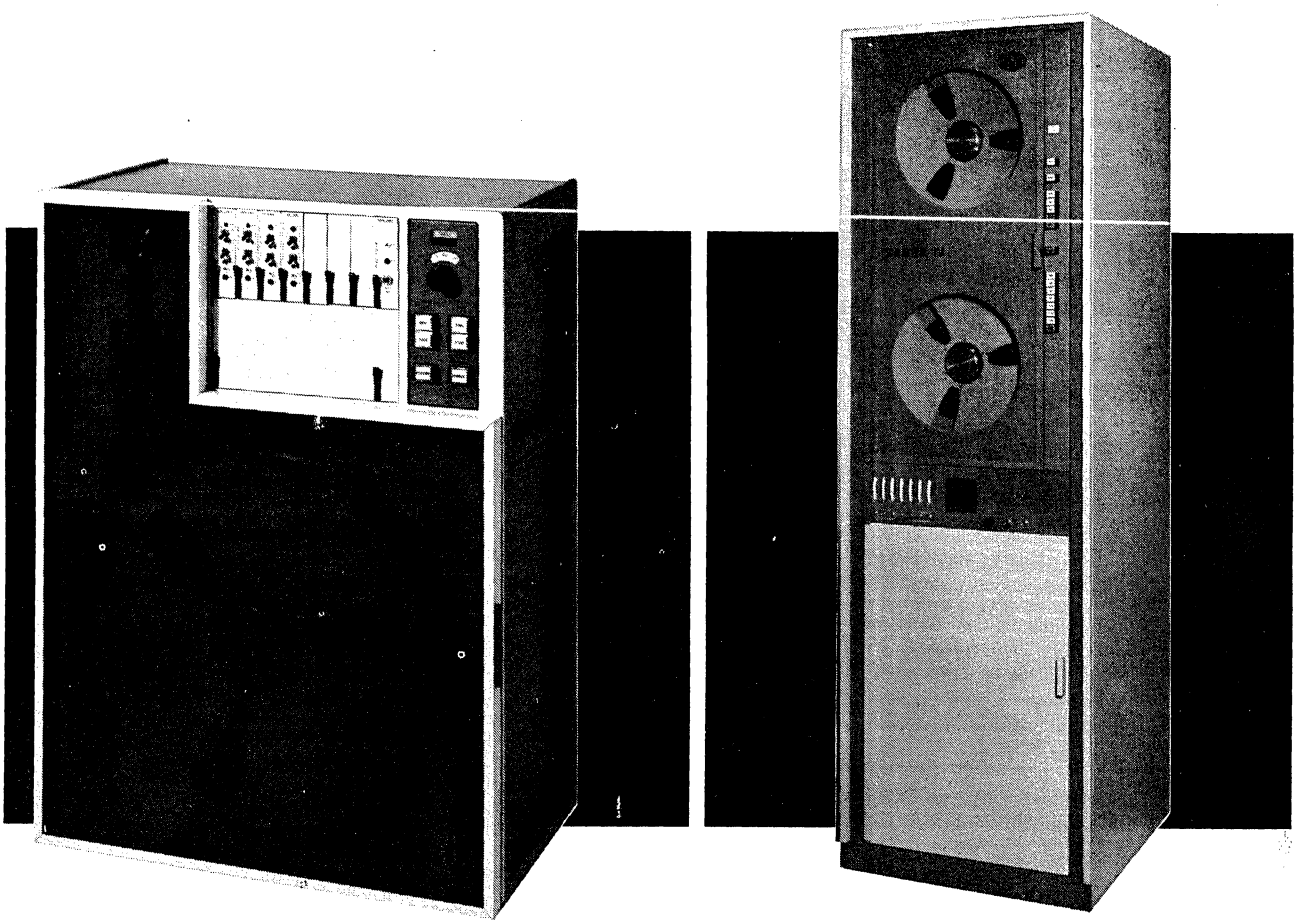
Instrumentation

Magnetic tape recording systems



PORTABLE SYSTEMS

Featuring:

IRIG Compatibility
All-band Capability
- Direct bandwidths to 2.0 MHz
- FM bandwidths to 500 KHz

Analog and/or Digital High Density PCM
Eight speed transports (1⅞ ips - 120 ips)
7, 14, 28 and 32 track capacity
AC or DC operation
Airborne, shipboard, mobile environments

LABORATORY SYSTEMS

Featuring:

IRIG Compatibility
All-band Capability
- Direct bandwidths to 2.0 MHz
- FM bandwidths to 500 KHz

Analog and/or Digital High Density PCM
Eight speed transports (1⅞ ips - 120 ips)
7, 14, 28, 32 and 42 track capacity

Sangamo's SABRE Series of Instrumentation Magnetic Tape Systems offers a family of recorder/reproducers with unequalled performance characteristics while providing unparalleled versatility. The SABRE Series allows complete interchangeability of record and reproduce electronics between portable and laboratory systems to reduce training and spares problems. Unique packaging provides maximum rack space utilization while providing the longest recording times available. Tape usage, handling and storage problems are reduced by providing the highest tape utilization factor in the industry.

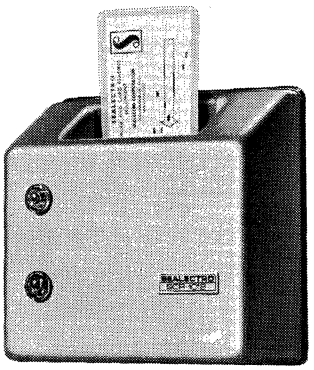
SEALECTRO

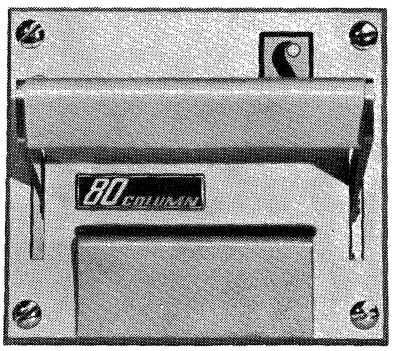
SEALECTROCARD™ CARD, BADGE AND TAB READERS



10 x 10-10 x 12 BADGE READERS

Completely automatic Badge Readers that accept standard IBM and Friden Type Badge cards in 10x10 or 10x12 formats. Ideal for personnel identification, production control and process control operations.

Go/no-go lights immediately indicate if the card is inserted correctly. No contacts actuate until the card is properly inserted. Remote solenoid-operated contacts sense hole patterns and read. Read function is automatically held until feedback from system releases contacts and card is automatically ejected. Flexible output wiring allows bussed or discrete contact interface connections.



12 x 80 CARD READER

The Sealectrocard card reader is designed to be completely compatible with all standard 12 x 80 TAB type punched-cards. This unit combines features which provide maximum reliability, convenience and economy in programming. The 12 x 80 Sealectrocard is ideally suited as peripheral equipment for a wide range of computers or as a programming device. Programs consisting of up to 960 bits of information can be read instantly from conventional punched-card formats. Features include:

- Remote contacts with double contact wiping surfaces.
- Positive mechanical lockout if a card is mis-orientated.
- Wide choice of terminations.
- Simple, fast operation even by unskilled personnel.

12 x 51 TAB READER

Accepts and reads standard 80 column TAB card, but limits read area to 51 columns, providing 612 bits of information. Ideal for data acquisition in production control and other terminal operations of data processing systems not requiring full 960 point readout.

Completely foolproof. Correct orientation and positioning of card electrically interlocks operating handle eliminating faulty readouts. Card is inserted in insertion slot, handle pulled down to read position, and unit is in operation.

Utilizes same electrical contact assembly as 12 x 80 Reader. Can be bussed vertically or horizontally. It may be used with completely discrete circuitry for each of the 612 points.

TAURUS

World Leaders in Card Readers

FEATURING HIGH RELIABILITY

A Complete Line of Punched Card Readers for Static and Serial Programming

APPLICATIONS

COMMERCIAL USES: Automatic test equipment, batching, automated warehousing, data processing, process control, flight simulators etc.

MILITARY USES: Ground checkout equipment, programming, testing, component testing, simulators, etc.

STANDARD SPECIFICATIONS

Cards—IBM, Rem. Rand or others.

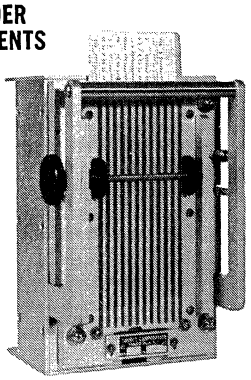
No. of Switches—10 to 960—(Form A, B or C).

Electrical—Dry Circuit to 3 AMPS.

MODEL M-4 *NEW!*

FULL IBM CARD STATIC READER
SMALLER — MANY IMPROVEMENTS

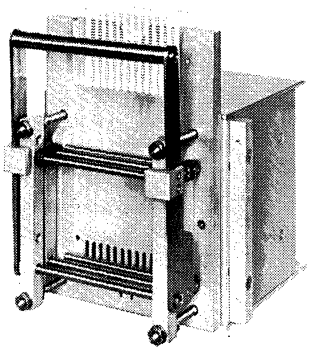
Reads up to 80 columns, or 960 switches, (complete IBM card). Most compact switching array available. Reads indirectly for maximum reliability. After insertion, punched hole has a closed switch, no hole an open switch. Switch reliability 100,000 cycles. Mechanical reliability 500,000 cycles.



MODEL JM-4 *NEW!*

SMALLER — MANY IMPROVEMENTS
STATIC READER FOR ONE HALF OF AN IBM CARD

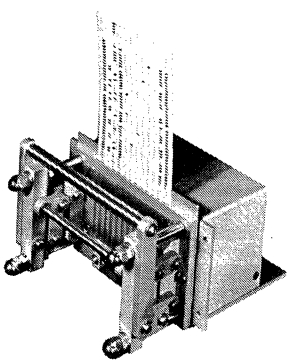
Reads up to 40 columns, or 480 switches, of an IBM card. After insertion, punched hole has a closed switch, no hole an open switch. Switch reliability 100,000 cycles. Mechanical reliability 500,000 cycles.



NEW!

MODEL CM-20

Reads up to 20 cards or 240 switches. Specifically designed for stacker cranes. Same switches as in M-4 and JM-4.

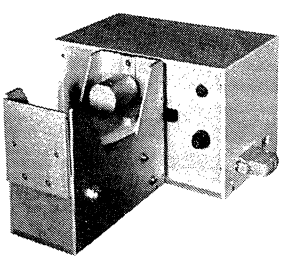


NEW!

MODEL 610-P

SERIAL READER
PHOTO-ELECTRIC

Feed and Read . . .
Less than $1,000.



Reads standard 80-column, 12-row cards, serially, column by column, 40 columns per second or less. For on line computer, remote transmission, interfaced with other machines, numerical control, card duplication or correction. Sizes 6¼″ High x 9¾″ Wide x 6½″ Deep. Automatic card feed available for sequential feeding of up to 200 cards.

Also Teflon Terminals and Printed Circuit Board Guides

CUSTOM BUILT UNITS ARE OUR SPECIALTY. We will fill your requirements in spacing, switch action, number of switches and any other special needs, and will determine the most economical size and type for your operations. **Send for 1971 Catalog.**

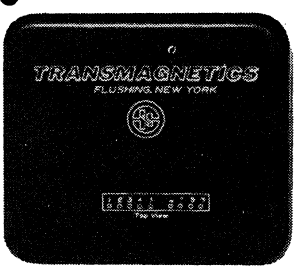
Solid State Synchro/Resolver Converters

Transmagnetics' unique compact solid state series converts all standard synchro or resolver formats to sine-cosine DC, linear DC with angle or digital angle outputs, replacing cumbersome mechanical servos and interfacing with digital computers and data processors.

SYNCHRO/RESOLVER TO SINE-COSINE DC

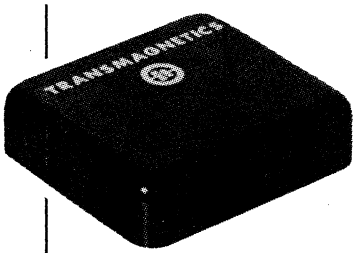
SERIES 655
are miniature modules which generate sine and cosine DC outputs proportional to the synchro or resolver input angle



SYNCHRO OR RESOLVER INPUT: 60 or 400 Hz, 90V or 11.8 VRMS line to line, 26 or 115 VRMS line
OUTPUTS: 10 sine and 10 cosine θ nominal. Outputs vary proportional to line. Also see 655-NVR series below.
ACCURACY: ± 5 minutes of arc.
DC POWER: Required for A655 models (buffered output) only, ± 15 VDC ± 3% at 20 MA
OPERATING TEMPERATURE: 0 to 70°C or −55 to +85°C
PACKAGES: for 400 Hz 11.8V L.L. — 0.58″H x 2.03 x 2.28
for 400 Hz 90V L.L. — 0.78″H x 2.53 x 3.22
for 60 Hz 90V L.L. — 1.28″H x 2.53 x 3.22

NON-VARIANT SYNCHRO TO SINE-COSINE DC

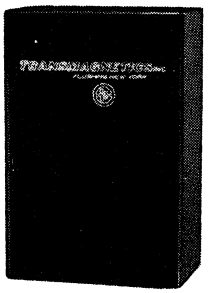
SERIES 655-NVR
modules maintain the sine-cosine outputs constant when the line and frequency vary and are independent of synchro non-linear characteristics. Synchro transformation ratios vary with line amplitude and frequency. In the 655 NVR series, these variations are computed and corrected for.



SYNCHRO OR RESOLVER INPUT: 60 or 400 Hz, 90V or 11.8V L.L. 26V or 115V RMS line
OUTPUTS: 10 sine and 10 cosine
CONFORMITY: Each output within ± ½% FS includes ± 10% line and ± 5% frequency variation, measured with actual synchro input.
ANGULAR ACCURACY: ± 15 minutes of arc.
DC POWER: ± 15V ± 1% at 50 MA
OPERATING TEMPERATURE: 0 to 70°C or −55 to +85°C
PACKAGE: 1.78″H. x 3.19 x 3.44

SYNCHRO TO LINEAR DC

SERIES 678
convert synchro or resolver inputs to a linear DC output proportional to the angle. The output rejects changes in line amplitude and frequency.



SYNCHRO OR RESOLVER INPUT: 60 or 400 Hz, 90 or 11.8V L.L. 26 or 115 VRMS line.
OUTPUT: −10 to +10V DC linear with angles from −180 to +180°.
ACCURACY: 6 or 15 minutes of arc. Effect of ± 10% amplitude and ± 5% frequency less than 3 minutes of arc.
DC POWER: +15V ± 3% at 125 MA max, −15V ± 3% at 60 MA max
OPERATING TEMPERATURE: 0 to 70°C or −55 to +85°C
PACKAGE: 1.80″H x 3.06 x 4.56

SYNCHRO/RESOLVER TO DIGITAL

SERIES 1623

See Transmagnetics page on D/A and A/D converters for characteristics of Series 1623 converters.

TRANSMAGNETICS INC.

210 Adams Boulevard, Farmingdale, New York 11735 • Phone: 516-293-3100

Solid State Computing Resolvers

Coordinate rotation, polar to rectangular or rectangular to polar conversion, sine-cosine generation and similar trigonometric computing functions which in the past have been implemented with mechanical resolver servo-systems, are now performed with Transmagnetics compact modules.

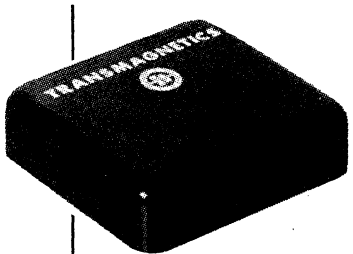
LINEAR DC TO SINE-COSINE OUT

C670 SERIES
accepts a DC input proportional to angle and provides two DC outputs proportional to sine and cosine of the angle.

INPUT: —10 to +10VDC representing angles from +180 to —180° into 75K ohms min input impedance.
OUTPUTS: K sine A and K cosine A where K = 10 ± 1%, outputs impedance less than 1 ohm, short circuit protected, 2000 ohms min. res. load.
ACCURACY: ± 15 minutes of arc as defined by ratio of outputs.
DYNAMIC RESPONSE: For a — 90 to + 90° step input, 25 milliseconds to reach rated accuracy.
DC POWER: + 15V ± 3% at 50 MA
— 15V ± 3% at 50 MA
+ 5V ± 5% at 200 MA
OPERATING TEMPERATURE:
0 to 70°C or — 55 to + 85°C
PACKAGE: 1.78"H X 3.19 X 3.44

COORDINATE ROTATOR

689 SERIES
accepts rectangular input (X and Y) and rotates the input through an angle proportional to a linear DC input



INPUT A: X = R cos A and Y = R sin A, each — 10 to + 10 VDC where R may vary from 20 mv to 10V, into 100K ohms nom.
INPUT B: — 10 to + 10VDC linear with angles from 0 to 360° into 100K ohms nominal.
OUTPUTS: R sin (A + B) and R cos (A + B)
ACCURACY: Angle ± 15 minutes at R = 10.
R: ± 0.15% FS
DYNAMIC RESPONSE: 450 conversions per second min.
DC POWER: + 15V ± 1% at 60 MA max
— 15V ± 1% at 60 MA max
5V ± 10% at 85 MA max
OPERATING TEMPERATURE:
0 to 70°C or — 55 to + 85°C
PACKAGE: 1.78"H X 3.19 X 3.44

POLAR TO RECTANGULAR CONVERTER

1618 SERIES
converts input in polar form R, A to rectangular R Sin A and R Cos A

INPUTS: R: 20 MV to 10V into 100K ohms nom.
A: — 10 to + 10V into 100K ohms nom., linear with angles from 0 to 360°.
OUTPUTS: R Sin A and R Cos A into 2K ohms min. res. load
ACCURACY: Angle: ± 15 minutes at R = 10
R: ± 0.15% FS
DYNAMIC RESPONSE: 450 conversions per second min.
DC POWER: + 15V ± 1% at 60 MA max
— 15V ± 1% at 60 MA max
5V ± 10% at 85 MA max
OPERATING TEMPERATURE:
0 to 70°C or — 55 to 85°C
PACKAGE: 1.78"H X 3.19 X 3.44

RECTANGULAR TO POLAR CONVERTER

695 SERIES
converts input in rectangular form X, Y to polar R, A

INPUTS: R Cos A and R Sin A into 100K ohms min. impedance. R may vary from 50MV to 10V.
OUTPUTS: R and A from less than 10 ohms to 2K ohms min. load.
ACCURACY: Angle: ± 15 minutes at R = 10
R: ± 0.1% FS
DYNAMIC RESPONSE: 450 conversions per second min.
DC POWER: + 15V ± 1% at 75MA max.
— 15V ± 1% at 75MA max.
+ 5V ± 5% at 50MA max.
OPERATING TEMPERATURE:
0 to 70°C or — 55 to + 85°C
PACKAGE: 1.78"H X 3.19 X 3.44

TEMPO

logic cards
high density packaging

DTL, TTL, & INTERFACE LOGIC CARDS

DTL

FLIP FLOPS (universal, register, counter, R-S, storage).

NAND GATES (inverters, 2, 3, 4 & 8 input).

DRIVER GATES (2 & 4 input buffers, 4 input power gate).

ONE SHOTS (fixed, adjustable, retriggerable).

MIXED LOGIC (NAND gates and inverters, AND gates, OR gates, transfer gates, NAND gates-inverters-flip flops, adders with clocked storage, and matrix select gate).

COUNTERS/DECODERS (universal, binary, BCD, synchronous, decoder).

SHIFT REGISTERS (2, 4, 8, 16 bit).

TTL

FLIP FLOPS (universal, register, counter).

NAND GATES (inverter gates, 2, 3, & 4 input NAND gates).

DRIVER GATES (2 & 4 input NAND Buffer).

ONE SHOTS (fixed, adjustable, retriggerable).

COUNTERS (binary & BCD synchronous, forward/reverse synchronous).

CLOCK SOURCE (crystal oscillator with frequency division).

DIGITAL COMPARATORS (4, 8, 12, 16 bit).

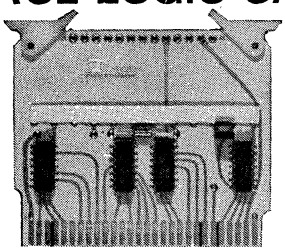
SHIFT REGISTERS (8, 16 bit).

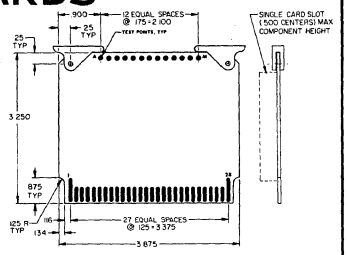
MULTIPLEXERS (8, 16 bit).

DECODERS (BCD to decimal; lamp driver, 7 segment, Nixie).

INTERFACE CARDS

Lamp drivers, relay drivers (form A and C) converters, static shift registers, memory with inverter drivers.





ELECTRICAL

LOADING:
Input: Flip-Flops. a) Clocks — 2 load units. b) Gates — 2/3 load units. c) Reset — 2 load units. Gates — 1 load unit. **Output:** Flip-Flops — 11 load units. NAND Buffer Gates — 25 load units. NAND Power Gates — 27 load units. NAND Gates — 8 load units.

Note: Load unit is equivalent to 3.75 K ohms to +5.00 V (one DTL/TTL input gate).

POWER SUPPLY REQUIREMENTS (Typical):
Series 20,000: +5.00 V ±10% • Series 21,000: +5.00 V ±5%

MECHANICAL

TEMPERATURE:

Operating	0°C to 75°C
	−55°C to 125°C optional
Storage	−65°C to 125°C

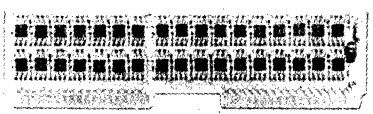
TEST POINTS: Up to 12 test points plus ground are provided at the top of the card. Test points are eyeleted to minimize wear and provide a mechanically strong point for probe connections.

BOARD MATERIAL: Thickness: .062 inch. **Type:** Glass epoxy per MIL-P-13949, Type GF. **Color:** White.

CONNECTOR: Type: Card Edge, 56 positions. **Material:** Gold plated per MIL-G-45204 over 1 oz. copper. **Width:** .062 inch. **Center to Center Spacing:** .125 inch. **Conductor Clearance:** .062 inch. **Insertion:** Over 500 insertion and withdrawal cycles. **Keying:** Consult applicable data sheet.

SPECIALIZED HIGH DENSITY PACKAGING

Tempo has developed HI-D® — a highly reliable economical and easily maintainable method of packaging electronic circuits.

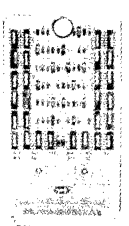


TYPICAL COMPONENT DENSITY

HI-D® is a stitch-wire welding process which consists of cold-flow welding insulated nickel wire to gold-plated stainless steel pins. Components are welded or soldered on the opposite side of the wired board. All connections are insulated and conformally coated for ruggedized use.

Major advantages of using this technique are:

- Only one basic board is used from which a multitude of logic configurations can be wired.
- Design modifications can be made with relative ease — a feature not available using other interconnection techniques.
- HI-D® permits full use of LSI and MSI circuits allowing installation of multiple packages on a single board, with a resultant decrease in back plane wiring.



INTERMIXING OF COMPONENTS

VERNITRON CATALOG DIGEST

Vernitron, one of the world's leading manufacturers of synchros, motors, and shaft encoders, offers the broadest range of synchro/digital conversion available, both solid-state and electro-mechanical. Please consult the factory for any option not listed below.

SYNCHRO TO DIGITAL CONVERTERS

Hz	L-L Voltage	Resolution	Accuracy	Power Requirements	Size (inch)	Model No.	Available Options
60	90	12 Bit Bin	±1 LSB	±15 VDC; +5V; 115 VAC Ref.	5 x 4 x 2	VSD-609SB	1. Package Configuration 2. Self Contained Power Supplies 3. 13 and 14 Bit Resolution 4. −55°C to +85°C Operating Temperature 5. Serial Output 6. Higher Tracking Rates 7. Multi-speed Conversion 8. Multi-channel Conversion
60	90	0-3599 BCD	±1 LSB	±15 VDC; +5V; 115 VAC Ref.	5 x 4 x 3	VSD-609SB-D	
400	11.8	12 Bit Bin	±1 LSB	±15 VDC; +5V; 26 VAC Ref.	5 x 4 x 1	VSD-401SB	
400	11.8	0-3599 BCD	±1 LSB	±15 VDC; +5V; 26 VAC Ref.	5 x 4 x 2	VSD-401SB-D	
400	90	12 Bit Bin	±1 LSB	±15 VDC; +5V; 115 VAC Ref.	5 x 4 x 2	VSD-409SB	
400	90	0-3599 BCD	±1 LSB	±15 VDC; +5V; 115 VAC Ref.	5 x 4 x 3	VSP-409SB-D	

ALL VERNITRON CONVERTERS WILL:
1. Operate over 0-70°C range.
2. Have a Digital Interface with DTL or TTL Compatible Logic.
3. Track at 270°/second, MINIMUM.
4. Be repairable in the field, if ever necessary.

DIGITAL TO SYNCHRO CONVERTERS

Hz	Output Voltage	V.A. Output	Accuracy	Power Requirements	Size (inch)	Model No.	Available Options
60	90	2	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 2*	VDS-609SP-2	1. Package Configuration 2. Self Contained Power Supplies 3. −55°C to +85°C Operating Temperature 4. Serial Input 5. Multi-channel Inputs
60	90	5	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 1**	VDS-609SP-5	
400	11.8	2	±1 LSB	±15 VDC; +5 VDC; 26 VAC Ref.	5 x 4 x 2	VDS-401SP-2	
400	11.8	5	±1 LSB	±15 VDC; +5 VDC; 26 VAC Ref.	5 x 4 x 1**	VDS-401SP-5	
400	90	2	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 2*	VDS-409SP-2	
400	90	5	±1 LSB	±15 VDC; +5 VDC; 115 VAC Ref.	5 x 4 x 1**	VDS-409SP-5	

ALL VERNITRON CONVERTERS HAVE:
1. 12 Bit parallel binary coded angle input (MSB = 180°, . . .).
2. Digital interface compatible with DTL or TTL logic.
3. Field repairability, if ever necessary.

* Transformers to be mounted externally.
** Transformers, power transistors, and heat sinks to be mounted externally. Consult factory for required volume.

SPECIAL CONVERTERS

Type Converter	Model No.	Characteristics
Solid State Synchro Signal Amplifier	VSA-101	Input: 3 Wire Synchro Data, 90V (L-L) 60 or 400 Hz; 115 VAC Reference Output: 3 Wire Synchro Data, 90V (L-L) 60 or 400 Hz Channels: Two, each completely isolated Accuracy: Plus/Minus 6 minutes of arc Size: Standard 19″ Rack (19″ x 6″ x 20″) Misc.: Self-contained Power Supplies; Short Circuit Protected; Automatic Cutoff of DC Supply if Overload exists; Overload Indicator
Electro-Mechanical Synchro to Digital Converter	VSD-120E	Input: Any 3 Wire, 90V (L-L) Synchro Data (Accepts 50-440 Hz); 115 VAC Reference Output: 0-359 BCD Accuracy: Plus/Minus 1 LSB Size: 7.0″ x 3.0″ Diameter (Also available in 5″ x 2.5″ x 5″) Speed: Up to 200 RPM (1200°/Second)
Electro-Mechanical Synchro to Resolver Converter	VSR-126E	Input: Any 3 Wire, 90V (L-L) Synchro Data (Accepts 50-440 Hz); 115 VAC Reference Output: 23RS4a Output Size: 10.0″ x 3.5″ x 4.0″ Misc.: This unit can be modified easily to accommodate any Size 23 Resolver
Electro-Mechanical Synchro to Digital Converter with Display	VSD-117E	Input: Two Channels, each 36x and 1x, 400 Hz, 90V (L-L) 3 Wire Synchro Data Output: Two Channel BCD, 0-35999; Two Displays, each 0-35999 Size: Standard 19″ Rack (19″ x 4″ x 19″)

STILL OTHER PACKAGES AVAILABLE AT VERNITRON:

DIGITAL TO RESOLVER • RESOLVER TO DIGITAL • SYNCHRO TO DC • DC TO SYNCHRO • STANDARD SERVO PACKAGES • SUB-SYSTEMS, WITH DISPLAYS AND POWER SUPPLIES • DIGITAL TO SHAFT POSITION CONVERTERS • UP-DOWN COUNTING SERVO PACKAGES • TORQSYN-ENCODER PACKAGES

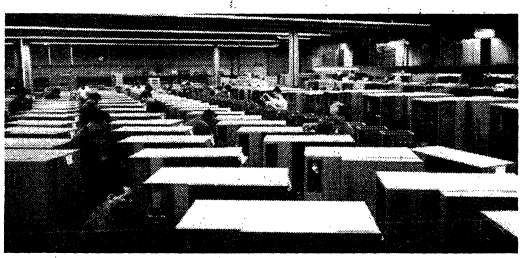
GO FAIL FREE

Now...you can match your products against stringent aerospace standards! Associated Testing provides manufacturers with one of the most complete testing capabilities available. These four testing areas, enhanced by the manufacturing division, put FAIL FREE product assurance within your easy grasp. For further information...and a big step towards product reliability...contact your nearest ATL office, as listed below.

1 ENVIRONMENTAL TESTING

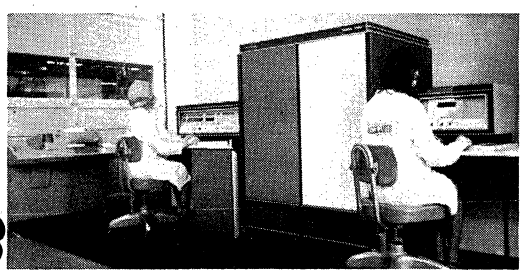
by one of the world's most experienced independent testing laboratories. Associated offers the finest in test equipment and engineering talent for military and commercial testing. Over 75,000 square feet of laboratory facilities offer vibration, shock, thermal vacuum, temperature—humidity, and salt spray testing on components, black boxes, or total systems.



2 ENVIRONMENTAL TEST CHAMBERS

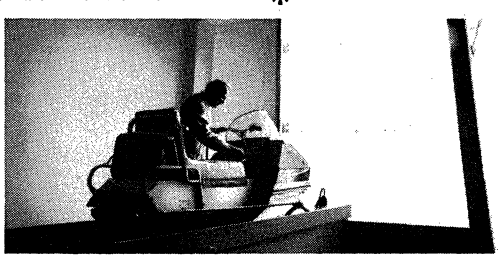
designed and specified to operate in accordance with the most rigorous government and commercial requirements, are built by Associated's Manufacturing Division. The widest selection of this type equipment is manufactured in production quantities, and delivered from stock.

✲ LOW-HIGH TEMPERATURE CHAMBERS
✲ TEMPERATURE-HUMIDITY CHAMBERS ✲ BURN-IN TEST CHAMBERS



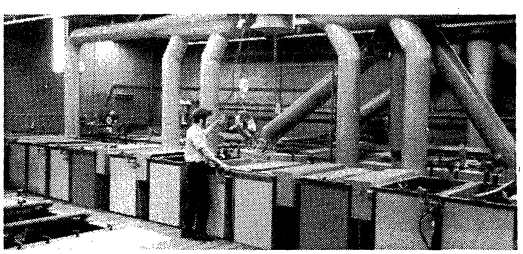
3 SEMICONDUCTOR SCREENING

is offered on a contract basis through Associated's Semiconductor Screening Division. Evaluation of integrated circuits, transistors, and diodes are available in programs which test a device from a go-no-go determination through a complete TX screen in accordance with MIL-STD-883.



4 COMMERCIAL TESTING

Products and components can be tested before you market...for safety, reliability, performance and convenience...at prototype stage, or against competition. Objective and subjective testing programs, geared to your requirements, can reduce product liability and provide accurate statistics on life expectancy, trouble areas and technical weaknesses.



5 METALS TESTING COMPANY, INC.

located in South Windsor, Connecticut, is an affiliate of Associated concentrating in the nondestructive testing area. Magnetic particle inspection, alloy testing, fluorescent and dye penetrant inspection, as well as anodizing and etching are performed in this modern, fully certified nondestructive testing laboratory.

ASSOCIATED TESTING LABORATORIES, INC.

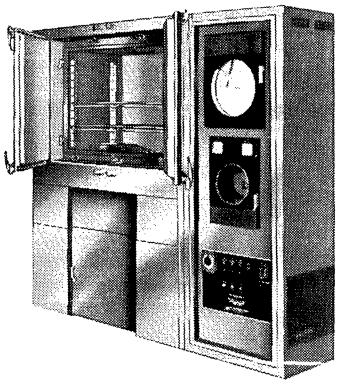
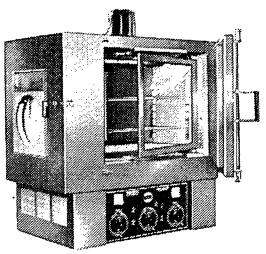
BLUE M TEMPERATURE CONTROLLED EQUIPMENT FOR ELECTRONICS RESEARCH AND PRODUCTION



FULL-RANGE TEMPERATURE/HUMIDITY CHAMBERS

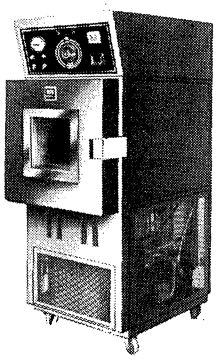
Maximum capability cabinets to perform all current MIL humidity tests. Dual wet and dry bulb POWER-O-MATIC 60® Saturable Reactor Control Systems assure absolute stability and reliability. High speed stabilization and the finest control tolerances available insure accurate reproduction of today's test requirements plus the capability of meeting future requirements when existing standards are tightened. These mechanical convection, horizontal air-flow units feature programming and separate monitoring recorder. Temperature range: −18°C. to +93°C. (±½°C.). Meets MIL-202D, Method 106C, Step 7A; automatically performs −10°C. dip without changing cams. Maintains R. H. ±½%. Chamber sizes: 5.8, 11, 27, and 64 cu. ft.

Similar units for single steady state tests available. Also new, compact top loading cabinets with similar operating characteristics.



AIR-COOLED TEMPERATURE/HUMIDITY CABINETS

HUMID-FLOW(TM) Combination Temperature/Humidity Cabinets with independent wet and dry bulb POWER-O-MATIC 60 Saturable Reactor Control Systems provide extreme accuracy from +12°C. above ambient to +93°C. (±½°C.). Use air for cooling, not costly conditioned water. Saves 30,000-100,000 gallons a year. The most reliable and economical chamber ever developed for long-term high temperature / humidity testing. Ideal for such steady state tests as MIL-202D, Method 103B — continuous operation for 56 days. Four sizes. 1.47, 3.24, 5.5, and 10 cu. ft.

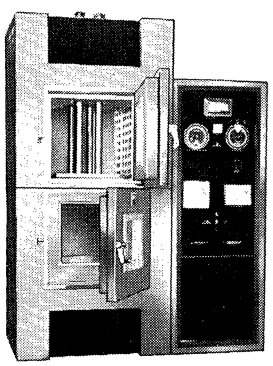


VERSA-RANGE® REFRIGERATED TEST CHAMBERS

Incomparable control accuracy, reliability and dependability—plus a choice of two versatile ranges: −100°F. to +400°F. and −40°F. to +200°F. Five chamber sizes—3 to 64 cu. ft.—for each range. POWER-O-MATIC 60 control carefully matched with heating system and exclusive quality non-cycling mechanical refrigeration system for maximum efficiency and economy. Rapid pull-down. Also chest type cold chambers with ranges to −40°F. and −120°F.

THESE ARE ONLY EXAMPLES OF OUR COMPLETE TEMPERATURE/HUMIDITY AND REFRIGERATION CONTROL CAPABILITY

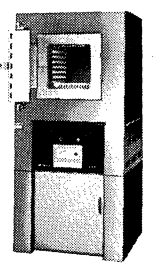
BLUE M THERMAL SHOCK TEST CHAMBERS DESIGNED FOR MIL-STD-202D AND 883



Ask about our complete line of thermal cycling chambers, LN_2 chambers, and new Versa-Whirl baths for MIL-STD-883, Method 1011, Conditions A to F.

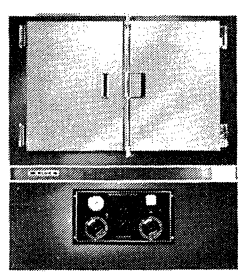
DUAL THERMAL SHOCK TEST CABINETS

2.3 cu. ft. work chamber moves vertically from lower cold chamber to upper heat chamber as required by spec. Cold chamber uses LN_2 to reduce incoming load to −55°C or −65°C. Has solid-state instrumentation. Heat chamber, with range of +204°C (+400°F), regulated by POWER-O-MATIC 60 Control for reliable, straight-line performance. Also available: 3-stage Thermal Cycling Test Cabinets to meet MIL-STD-202D, Method 102A, Preferred Conditions C & D. Test accomplished in one unit instead of two as is customary. Operation of both models is fully automatic—with reliability and accuracy to meet spec. easily.



BLUE M FURNACES

A wide variety of research and production models to suit the strictest needs. Box type muffle furnaces, Globar units — in bench and floor models — new tube furnace. Most have solid-state instrumentation for extremely accurate temperature control and unmatched reliability. Temperatures to +3000°F. Quality materials and workmanship throughout.



BLUE M OVENS

All types. Mechanical and gravity... batch, aging, vacuum, life-test, hazard-safe, gas forming, annealing. Simple lab models to units for Mil Specs. Sizes to 96 cu. ft.... temperatures to +1200°F. Most have patented POWER-O-MATIC 60 Control, others feature patented POWER-O-MATIC 70® Solid-State Proportioning Control. All accessories, including programming, available.

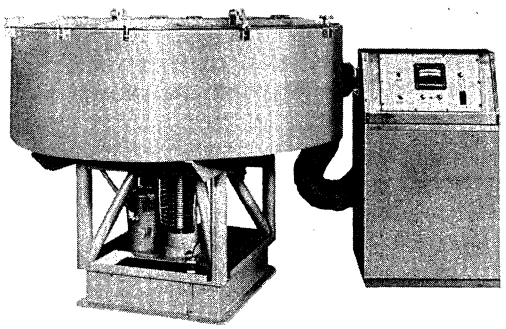
PROGRAMMED ENERGY SYSTEMS

Schaevitz Programmed Energy Systems are complete equipment packages designed to provide kinetic energy sources on a pre-programmed basis. These systems are of three basic types: electro-mechanical, electro-hydraulic and electro-pneumatic. Two standard families of products are currently manufactured by Schaevitz Engineering – precision centrifuges and tensile testing equipment. Other pre-programmed force and position controllers are offered as special systems.

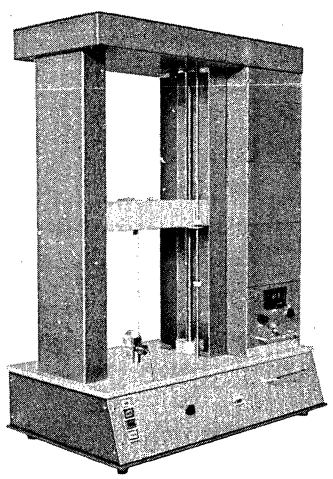


PRECISION CENTRIFUGES

Schaevitz offers a comprehensive line of precision centrifuges. These machines apply pre-programmed acceleration forces to test specimens over a wide range of capacities. Closed-loop velocity feedback and SCR motor drive control assure reliable and accurate system performance. Schaevitz centrifuges are heavy-duty precision machines designed for safety and service.

Centrifugal Capacities:	1000 to 50,000 G-pounds
Acceleration Ranges:	50 to 20,000 G
Specimen Weights:	1 to 1000 pounds
Accuracies:	0.001 to 0.1%

Request Technical Bulletin 6001



TENSILE TESTING EQUIPMENT

The Schaevitz precision line of tensile testing equipment incorporates advanced engineering techniques for automatically testing paper, fabrics, yarns, plastics, and light metals. The following automatic functions are included: constant rate of extension, constant rate of load, and constant rate of strain. Equipment options offered include: digital printing, x-y recording, automatic programming, digital-coded output and computer interfacing.

Load Range:	50 grams to 2000 pounds
Crosshead Travel:	28 inches
Loading Accuracy:	0.2%

Request Technical Bulletin 6501

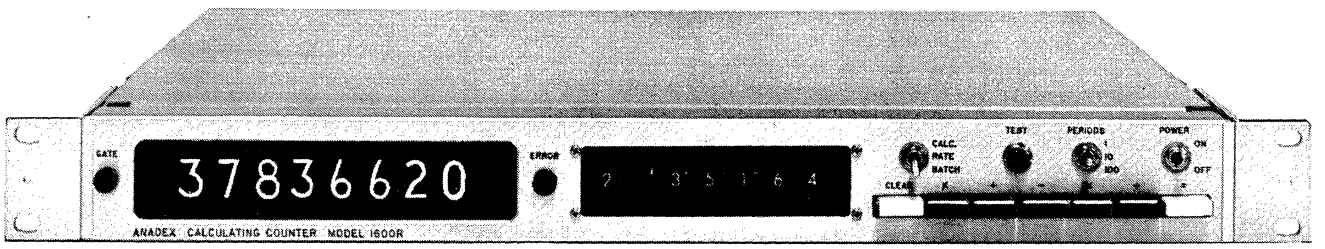
ANADEX CALCULATING COUNTERS MODEL 1600R



- CALCULATES AND DISPLAYS NORMALIZED **RATE** AUTOMATICALLY IN P.P.H., G.P.M., RPM, Hz., ETC., BY MEASURING TIME FOR 1, 10, OR 100 PERIODS OF THE INPUT FREQUENCY.
- CALCULATES **VELOCITY** AUTOMATICALLY IN F.P.S., M.P.H., ETC., BY MEASURING TIME INTERVALS TO 1 μs RESOLUTION.
- CALCULATES CUMULATIVE (TOTAL) AMOUNT AUTOMATICALLY IN POUNDS, BARRELS, GALLONS, ETC., IN **BATCH** MODE.
- IN **CALCULATE** MODE, MULTIPLIES, DIVIDES, ETC., WITH UP TO 8 SIGNIFICANT DECADES.
- ZERO CONTRIBUTED ARITHMETIC ERROR.
- 10 MV RMS INPUT SENSITIVITY WITH HIGH COMMON MODE REJECTION.
- SINGLE AND MULTIPLE INPUT CHANNEL MODELS.

DIGITAL COUNTERS

ANADEX
INSTRUMENTS, INC.

- **PLUG-IN TTL INTEGRATED CIRCUITS**
- **15 MHz COUNT RATE**
- **10 MV OR 100 MV INPUT SENSITIVITY**
- **1¾" x 19" or 3½" x 8½" FRONT PANEL HEIGHT**
- **HIGH NOISE IMMUNITY**
- **1 MHz CRYSTAL TIME BASE**
- **LOW COST**

The Anadex "600" Series of Frequency Counters are designed to meet your specific functional requirements for industrial production test equipment and system applications.

Custom features in standard models provide compactness, environmental tolerance and greatly enhanced serviceability, at significant economies.

On all CF Series you have the choice of input sensitivity and count rate capability and you MUST SPECIFY WHICH STANDARD OPTION YOU DESIRE. It is possible to change to the other selection at a later date since the amplifier board is readily replaced. Choose the options you require, such as display memory, front panel input BNC's, digital output signals, and REMOTE FUNCTION PROGRAMMING. Most models may be ordered with 4, 5, 6, or 7 decades. Bench/half rack and 1¾" high full rack configurations are available.

The use of PLUG-IN TTL INTEGRATED CIRCUITS on flat printed circuit boards provides easy accessibility and makes the counters exceptionally reliable and easily serviced. DC switching and TTL integrated circuits provide inherent HIGH NOISE IMMUNITY.

GENERAL SPECIFICATIONS

All silicon solid-state with long-life, in-line numerical indicator tubes.

Plug-in TTL integrated circuits.

Count rate to 100 KHz @ 10 MV sensitivity, or 10 MHz @ 100 MV sensitivity rolling off to 200 MV @ 15 MHz available on all models.

Decimal indicators on applicable models.

Display time continuously variable from 0.1 seconds to 8 seconds and infinite in HOLD except for the Totalizer series.

Reset by front panel pushbutton or rear input from remote solid-state or mechanical switch closure to common terminal or pulse.

Gate Output: All modes. +0.4V DC maximum when count gate is open and +2.4V DC minimum all other times to permit gating up to 5 slave counters or totalizers.

Reset Output: Pulse output from +2.4V DC minimum to +0.4V DC maximum at rear terminal to permit resetting up to 5 slave counters or totalizers.

Operating Temperature Range: 0°C to +60°C.

Power: 105 to 125V or 210 to 250V, 50 to 400 Hz, except the Frequency Counter Series. 5-decade model without options, 20 watts nominal.

ANADEX
INSTRUMENTS, INC.

STANDARD OPTIONS ("600" SERIES)

A. Display Memory: Provides continuous numeric display and includes gate light. Disable switch on rear panel.
Price: $15.00/decade

C. Front panel input A, B, and/or C BNC in parallel with rear input BNC.
Price: $10.00/BNC

D. Temperature-controlled crystal oven: ±1 PPM total from +10°C to +60°C.
Price: $55.00

E. Special paint finish (Fed. Std. 595 colors). **Price: $60.00 per lot, regardless of quantity. Other than Fed. Std. 595 colors, as above plus cost of paint.**

G-5A. BCD Output: Provides 1, 2, 4, 8 BCD parallel data outputs. Logic "0": +0.4V DC maximum at a sink current of 6 ma maximum. Logic "1": +4.7V DC nominal unloaded with source resistance of 1.8K. Print command signal is also provided. **Price: $40.00**

J-4. 10 MV preamp (see Note 1, OPTION S1). **Price: $60.00**

J-5. 100 MV preamp (see Note 1, OPTION S2). **Price: $60.00**

P-1. 50 Hz Power Line Frequency.
Price: $25.00

RP. Remote Function Programming.
Price: Consult Factory

NOTES

1. Associated with the front panel sensitivity control is a rotary switch to decrease maximum sensitivity by factors of 10 and 100. ONE OF THE FOLLOWING OPTIONS MUST BE ORDERED.

Option S1
Sine Wave: 10 MV RMS maximum from 3 Hz to approximately 100 KHz (rolling off above 100 KHz at −12 db per octave); 100 MV RMS at 1 Hz; 20V pk-pk maximum input on X1 position of input sensitivity multiplier switch: 200V pk-pk maximum input on X10 position; and 300V pk-pk maximum input on X100 position. Impedance is 100K ohms (nominal) in parallel with 50 pf shunt.

Pulses or Square Waves: 30 MV pk from 0 to 100 KHz. Rise time, 1 μs maximum for negative pulses.

Option S2
Sine Wave: 100 MV RMS from 3 Hz to 10 MHz, rolling off to 200 MV RMS at 15 MHz; 20V pk-pk maximum input on X1 position of input sensitivity multiplier switch; 200V pk-pk maximum input on X10 position; and 300V pk-pk maximum input on X100 position. Impedance is 1 megohm (nominal) in parallel with 50 pf shunt.

Pulses or Square Waves: 300 MV pk from 0 to 10 MHz (rolling off to 600 MV pk at 15 MHz); Pulse width, 50 nanoseconds for negative pulses.

2. Ratio: 1V RMS sine wave input, 100 Hz to 1 MHz. Input impedance 1000 ohms nominal.

Pulses or Square Waves: 3V pk, 0 to 1 MHz; Pulse width, 0.5 μs minimum for negative pulses.

3. 3 Volts pk-pk Square Wave or positive pulse, to 15 MHz, rise time 1 μs maximum duration 50 nanoseconds minimum.

4. START-STOP: Solid-state or mechanical switch closure to common terminal opens gate. Also DC level: +12V DC to open gate, OV DC or open circuit to close gate.

5. The Multi-Channel Variable Time Base Counters are also available as 3, 4, 5, and 6-channel input units. Add $110.00 per channel to 2 channel base price shown for rack models and $130.00 per channel for bench models.

6. Quantity Discounts: 1-9, List Net; 10-19, Less 5%; 20-49, Less 8%; 50-99, Less 10%; 100 and up, Factory Quote.

FREQUENCY MEASUREMENT (Accuracy ±1 Count ±Time Base Accuracy)	TOTALIZE & TIME INTERVAL MEASUREMENT	PERIOD MULTIPLE PERIOD, TIME FOR N EVENTS	RATIO MULTIPLE RATIO, PRESET COUNT
	TOTALIZE: Displays total input pulses. START-STOP: (See Note 4).		
Measures input frequency for time intervals of 0.1, 0.6, 1.0, 6.0 or 10 seconds as set by function switch.	TOTALIZE: Displays total input pulses. START-STOP: Separate or common start-stop pulse inputs, DC level or contact closure to ground. (See Note 4).		
Measures input A for time intervals of .01, 0.1, 1.0 or 10 seconds as set by selector switch. Decimal point indicates Hz or KHz.	TOTALIZE: Displays total input pulses. TIME: Displays time in microseconds, (1μsec. clock). START-STOP: Separate or common start-stop pulse inputs, DC level or contact closure to ground. (See Note 4).	Displays time for 1, 10 or 100 periods. Reads in milliseconds and microseconds with positioned decimal point.	RATIO: Displays $\frac{\text{Freq. of Input A}}{\text{Freq. of Input B}}$ x 10^3, x 10^4, x 10^5, x 10^6 and $\frac{\text{Freq. of Input B}}{\text{Freq. of Input A}}$ x 1, x 10, x 100 (See Notes 1 and 2 for Inputs).

CUSTOM DESIGN PRODUCTS

Anadex provides custom design instruments to meet specific packaging and specification requirements. For example, Anadex supplies the major portion of the digital instrumentation to a large producer of micro-analysis instrumentation. This instrumentation package includes Scalers, Scaler Timers, Intercoupler to an ASR33, and

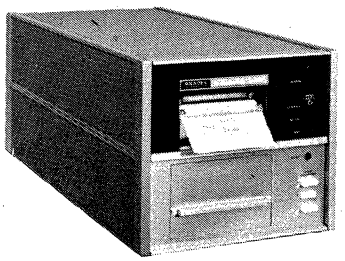
DIGITAL PRINTERS
DP-600

ANADEX
INSTRUMENTS, INC.



- **Buffered Input**
- **Input Data Storage**
- **Programming and Format Capability**
- **Floating Decimal Point, Automatic Zero Suppression**
- **Roll or Fan-Fold Paper, Internally Stored**
- **Easy Front Access Paper Loading**
- **Red/Black Printing**

Basic Unit: 7 columns, field-expandable to the maximum capacity of 21 columns via 2 additional, identical plug-in circuit board sets.

Printing Rate: 3 lines/second (up to 63 characters per second).

Data Input Code: 1, 2, 4, 8 Binary (BCD for numerals).

Data Input Levels: 1, 2, 4, 8 I.C. logic — DTL and TTL compatible. Logic "1" = +2.4V min. (to +18V max.). Logic "0" = +0.5V max. (to −8V min.). Data Source Resistance = 8K max. (Complementary input logic levels of above are available as a Standard Option.)

Memory: Buffer storage is standard for each line of print.

Number of Data Sources: Input data from up to 3 data sources may be transferred into Memory by a print command signal.

PRICE: Model #DP-600 (Includes input mating connectors as required.)
7 columns $1,295.00
14 columns $1,495.00
21 columns $1,695.00

OPTIONS
- RC — REMOTE PROGRAMMER CONTROL, $50.
- CL — COMPLEMENTARY INPUT data logic levels, $50.

Print Configurations: (Programmed via 3 front panel pushbuttons.)

OR: Print-out of data from a data source occurs independently when that data source is "ready."

AND: Printing of data from all data sources will occur simultaneously when the data sources programmed are ready.

Decimal Point: Floating (Does not occupy a full column space).

Zero Suppression: Functions independently within each field of seven columns or may be programmed to operate across one or more fields.

Format Control: Almost any **input** character or space may be programmed into any columnar position.

Paper Feed: May be controlled by an externally generated logic level or front panel manual FEED pushbutton.

Out-of-Paper Warning: Front panel mounted light and output logic level. (Printing inhibited when out of paper.)

Paper: Standard is single-copy roll-type paper. 7″ fan-fold is also available and pressure-sensitive multiple-copy roll and fan-fold paper are available accessories.

Red/Black Printing: This standard feature is controlled by remotely generated logic level but can be used only on single-copy roll or fan-fold paper.

Paper Width: 3.5 inches nominal.

Character, Horizontal Spacing: 7 characters per inch.

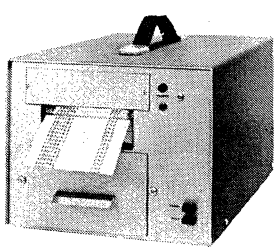
Line, Vertical Spacing: 5 lines per inch.

Physical Size: Standard — bench mount, 7″ high, 8½″ wide, and 18″ deep. Half rack mounting hardware, optional feature.

Power: 105V to 125V RMS or 210V to 250V RMS, 50 to 400Hz at approximately 50 watts.

OPTIONAL ACCESSORIES
- Roll Paper, $0.95/roll
- Fan Fold Paper, $1.50/stack
- Kit for center rack mounting, $25.
- Kit for dual rack mounting, $25.

DP-650



- **Low Cost**
- **OEM Features Available**
- **DTL/TTL Compatible**
- **Field Expandable via Plug-In IC's**
- **Roll or Fan-Fold Paper Internally Stored**
- **Red/Black Printing**

Basic Unit: 7, 14, or 21 columns including case, mating connector, power cord and one roll of paper. Available in other column capacities; without the case, without the power supply, or combinations thereof at reduced cost.

Printing Rate: 3 lines/second asynchronous (up to 63 characters per second).

Data Input Code: 1, 2, 4, 8 Binary code for each column.

Data Input Levels: DTL/TTL COMPATIBLE. Logic "0" = +0.4V at 3.2 ma maximum sink current; Logic "1" = +2.4V to 5V maximum or open circuit. Unterminated lines are equivalent to the logic "1" state.

Print Format: Standard DP-650 printers are supplied to print in the columns as follows: 7 columns, columns 13 through 19 inclusive; 14 columns, columns 6 through 19 inclusive; 21 columns, all columns.

Decimal Points: Nine floating decimal points in columns 10 through 18 selected by single line inputs, Logic "1" = +2.4V to 5V maximum or open circuit will energize the decimal point. Decimal points can be programmed in any nine columns, 1 through 19, by appropriate placement of resistors on P.C. board.

Paper Feed: May be controlled by an externally generated logic "0" level or front panel manual FEED pushbutton.

Red/Black Printing: Application of a logic "1" for a minimum duration of 75 ms actuates red select.

Paper: Standard is single-copy roll-type paper. 7″ fan-fold is also available and pressure-sensitive multiple-copy roll and fan-fold paper are available accessories.

Paper Width: 3.5″ nominal.

Character, Horizontal Spacing: 7 characters per inch.

Line, Vertical Spacing: 5 lines per inch.

Physical Size: 8½″w x 7¾″h x 14½″d. Case includes carrying handle and feet.

Power: 105 to 125V RMS, 210 to 250V RMS, 50 to 400 Hz, 50 watts nominal.

Price: Includes Input Connector.

DP-650-7 $745.00 DP-650-14 $770.00 DP-650-21 $795.00
Optional Out-of-Paper Warning — $37.50

FREQUENCY TO DC CONVERTERS

ANADEX
INSTRUMENTS, INC.

Anadex Frequency to DC Converters have found wide acceptance in the industrial and aerospace industries for speed and flow rate monitoring and control applications. All models are compatible with low level signal sources such as flowmeters, tachometers, radiation detectors, etc. Package configurations range from rack mount models to hermetically sealed MIL-T type cans, industrial, and single printed circuit board units which require an external power supply.

Output signals of 0 to 5V DC, 1 to 5 ma, 4 to 20 ma, and 0 to 50 mv assure compatibility with most indicators, recorders and recorder controllers used in industry.

PI-200

- **Compact**
- **Lightweight**
- **±0.2% Linearity**
- **0 to 50 MV Output**
- **Low Cost**

Price: Includes Mating Connector
PI-200 $155.00 PI-220 $155.00 Opt. P $25.00

Full Scale Frequencies: 100, 200, 300, or 500 Hz; 1, 2, 3, 5, 10, 20, 30, or 50 KHz full scale. Two to one adjustment of full scale provided.

Input: Model PI-200 — Sine or square wave to a minimum of 5 Hz.
Model PI-220 — Pulse or square wave, +1V min. to +30V max., 1 μs min. duration, down to 0 Hz.

Sensitivity: 10 MV RMS to 30V RMS.

Input Impedance: 22K ohms.

DC Output: 0 to +50 MV, 1250 ohms output impedance.

Temperature Range: 0 to +165°F.

Temperature Coefficient: ±0.005% per degree F typical.

Linearity: ±0.2% of full scale frequency.

Square Wave Output: At input frequency rate. Approx. 8V pk-pk in series with 10K output impedance.

Power: 22 to 30V DC at 15 ma. Opt. P, 105 to 130V RMS, 50-400 Hz.

Dimensions: MIL-T-27 can, Type FB, stud mounted.

Connector: MS3102A-14S-6P. Solder header available if specified.

PI-355 & PI-375

- **±0.03% Linearity**
- **Isolated DC Output**
- **Fast Response**
- **−55° to +165°F Operating Range**
- **Transformer Coupled Input**
- **10 MV Sensitivity**

Price: $295.00 includes mating connector. Opt. P $25.00

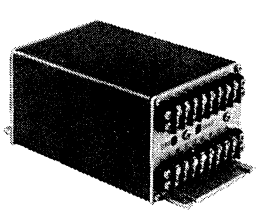
Full Scale Frequencies: 100, 200, 300, or 500 Hz; 1, 2, 3, 5, 10, 20, 30, or 50 KHz full scale. Two to one adjustment of full scale provided.

Input: SEE CHART. Either differential or single ended, transformer coupled.

Common Mode Rejection (PI-355): 60 db at 60 Hz.
Temperature Coefficient: ±0.005%/°F.
Temperature Range: −55° to +165°F.
Linearity: ±0.03% of full scale frequency.
DC Output: 0 to 5V full scale, 5 ma max. current. Isolated with respect to signal input and power supply.
Square Wave Output: 25V pk-pk at input frequency rate from 15K source impedance.
Power: 22 to 30V DC at 120 ma. Opt. P, 105 to 130V RMS, 50-400 Hz.
Size: MIL-T-27 can, Type FA, stud mount. Type GA for Opt. P.
Connector: MS-3102A-16S-1P, or solder header if specified.

Model	Input Sensitivity 5 Hz to 10 KHz	Input Sensitivity 50 KHz	Max. Input	Input Imped.	Output Imped.
PI-355	10 MV RMS	250 MV RMS	50V RMS	5K	0.5 ohms
PI-375	1V RMS	25V RMS	250V RMS	47K	0.5 ohms

PI-600



- **All Solid State**
- **±0.05% Terminal Linearity**
- **Multiple Outputs for Current and Voltage**
- **High Stability**
- **Industrial Packaging**
- **Easily Serviced**

Price: $295.00

Input: 10 MV sensitivity to 150 Volts max.; transformer coupled.

Frequency Range: 250 Hz full scale to 3000 Hz full scale sine wave, square wave or approximations thereof in three ranges selectable by terminal strip jumpers. Sensitivity control allows discrimination against noise.

Input Impedance: Greater than 5000 ohms.
Output: 0 to 5V DC, 1 to 5 MA and 4 to 20 MA selected by terminal strip jumpers.
Linearity: Better than ±0.05%.
Temperature Range: 0 to +165°F.
Temperature Coefficient: ±0.005% of F.S. per °F.
Size: 3"h x 4"w x 6" long, less flanges.
Power: 105-125 or 210 to 250V RMS, 50-400 Hz.

7833 HASKELL AVENUE, VAN NUYS, CALIFORNIA 91406 / PHONE 213-873-6620 / TWX 910-495-1762

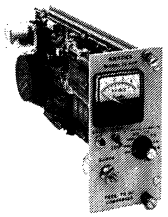
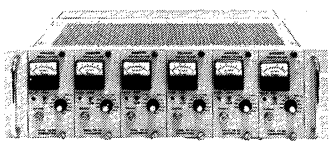
FREQUENCY TO DC CONVERTERS
PI-608

ANADEX
INSTRUMENTS, INC.



- All Solid State
- ±0.025% Terminal Linearity
- Selectable Transient Response Rate
- Low Output Ripple
- High Sensitivity Transformer Coupled Input
- High Common Mode Rejection
- 5 Hz to 51.2 KHz Range in 10 Ranges
- 0 to 5V DC Floating Output
- Floating Pulse Output
- Plug-in Modules



Price: $415.00/Module.
Price: Rack Adapter
Includes Mating Connectors.

HR-608	$650.00
HR-618	$575.00

Input: 10 MV sensitivity to 150 volts max.; guard-shielded and transformer-coupled.

Frequency Range: 5 Hz to 51,200 Hz in 10 switchable ranges with 2 to 1 front panel range adjustment.

Linearity: ±0.025% terminal linearity.

Output: 0 to 5V DC, floating, 20 MA maximum at 5V, short circuit protected.

Output Impedance: Less than 0.5 ohms.

Pulse Output: Floating transformer coupled pulse output, 2V pk-pk nominal. Will supply 20 MA into 50 ohm load.

Ripple: For sine or square wave input — with transient switch in LOW ripple is less than 1 MV pk-pk at upper F.S. frequency and less than 10 MV pk-pk at 10% of upper F.S. frequency.

Temperature Range: 0°F to +150°F.

Temperature Coefficient: ±0.005% per °F.

Transient Response: Two-position switch to select transient response of approximately 10/f in HIGH position or 50/f in LOW position, where f is the lowest full scale frequency on any one range.

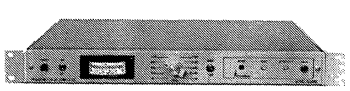
Power: 105-125V RMS, 50-400 Hz. DC power supply internal with module.

RACK ADAPTER

Models HR-608, HR-618: The Model HR-608 Rack Adapter holds six PI-608 modules in a standard 19″ rack. A crystal referenced calibration oscillator and associated circuitry generate ten calibration frequencies for the six PI-608 plug-in modules. The appropriate lower full scale calibration frequency is selected automatically by the range switch on the PI-608 modules and is introduced into the module whenever the respective front panel calibration button is depressed. The calibration process may also be initiated remotely by a contact closure. For example, when a PI-608 module selector switch is set to the 400-800 range, it will receive a 400 Hz calibration signal when calibration is initiated by either method. A single Model HR-608 is capable of supplying the calibration signals to a maximum of sixty PI-608 modules.

The Rack Adapter Model HR-618 is identical to the Model HR-608 except it does not include the calibration oscillator. It is generally used in larger systems where the calibration frequencies are provided by one HR-608 Rack Adapter. As an example, if a system consists of 60 PI-608 modules, one Model HR-608 and nine HR-618 Rack Adapters would be required.

PI-608R



Price: $595.00 Includes Mating Connectors.

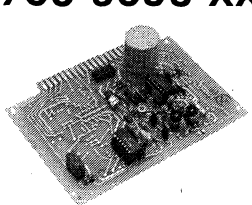
Opt. C-1	$170.00
Opt. C-2	$ 75.00

The Model PI-608R Frequency to DC Converter is designed for rack mounted applications. Specifications are the same as the Model PI-608.

When the Model PI-608R is ordered with Calibration Option C-1, a crystal referenced oscillator and associated circuitry required to generate ten calibration frequencies is provided within the enclosure. The appropriate lower full scale calibration frequency is selected automatically by the front panel mounted Range switch and is introduced into the converter when the front panel CALIBRATION button is depressed. The calibration process may also be initiated remotely by a contact closure. For example, when the PI-608R range selector switch is set to the 400-800 Hz range, it will receive a precision 400 Hz signal when calibration is initiated by either method.

Option C-2 provides internal relay control and hardware which enables the PI-608R to be driven by calibration frequencies provided by a remote source such as a Model PI-608R with Option C-1.

1700-5096-XX



- Systems Oriented
- ±0.03% Linearity
- 10 MV Sensitivity
- Isolated Outputs
- Low Cost

Price:

1-9	$175.00	20-49	$145.00	100 & Up	$120.00
10-19	$166.00	50-99	$139.00		

BASIC SPECIFICATIONS THE SAME AS MODEL PI-355 ON PAGE 397.
Power Required: +15V DC ±0.1% and −15V DC ±0.1%, each at 40 ma nominal current.

Zero & Span Controls: Separate ZERO and SPAN controls are provided on each board.

Connections & Physical Size: Single card, 5.20″ x 3.90″ with edge card contacts on one end, dual 18 pin 0.156″ spacing. Mating connector, Cinch #251-18-30-160 (Anadex 2103-5000-01 at $5.00). Height of components above board, 1.5″ max.

Frequency Level Detection: Available on request at additional cost for alarm purposes.

Ordering Information: Dash number after 1700-5096 describes full scale frequency.

Model	Hz	Model	KHz	Model	KHz

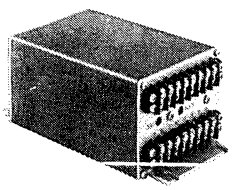
DC TO FREQUENCY CONVERTERS

ANADEX
INSTRUMENTS, INC.

Anadex offers a complete line of uni-polar and bi-polar voltage to frequency converters for use in the industrial and aerospace industries for analog signal digitizing or transmission. A choice of package configurations are provided to meet your specific requirements.

For systems applications, both uni-polar and bi-polar converters are available on plug-in printed circuit boards at attractive price schedules. Modifications are available and invited to meet special requirements.

DF-100 (UNI-POLAR)



- 100 MV Full Scale Input
- All Silicon Solid State
- Easily Serviced
- High Accuracy
- Instantaneous Response
- 100 KHz Output
- Industrial Packaging

Price: $325.00

100 KHz FULL SCALE OUTPUT	
Full Scale DC Input Voltage	Input Impedance
100 MV	1000 ohms
1.0 V	10 K ohms
10.0 V	100 K ohms
100.0 V	1 M ohm

Linearity: Better than 0.01% full scale from best straight line.

Output Waveform: Separate simultaneous DC coupled positive and negative pulses, 0V to +1.5V and 0V to −1.5V nominal peak amplitudes, each 2 microseconds nominal width.

Output Response: Essentially instantaneous, output changes to new frequency in less than one cycle of output.

Temperature Range: 0°F to +165°F.

Temperature Coefficient:
Full Scale: Less than ±0.005% per °F over operating temperature range.
Zero: ±10 microvolts per °F (referred to the input) over operating temperature range.

Size: 3"h x 4"w x 6"long less flanges.

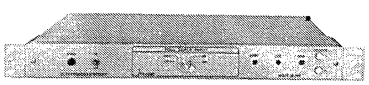
Power: 105-125 or 210-250V RMS, 50-400 Hz.

DF-110R (UNI-POLAR)

Features and Specifications the same as Model DF-100 except unit is 1¾" high and is for Rack Panel Mounting. Input thru rear mounted MS3102A-14S-7P connector.

Price: $525.00 Includes Input Mating Connector.

DF-115R (BI-POLAR)



- Bi-polar Conversion
- 100 MV Full Scale Input
- All Silicon Solid State
- Easily Serviced
- High Accuracy
- Instantaneous Response
- 100 KHz Output

Price: $795.00 Includes Input Mating Connector.

100 KHz FULL SCALE OUTPUT	
Full Scale DC Input Voltage	Input Impedance
±100 MV	1000 ohms
±1.0 V	10 K ohms
±10.0 V	100 K ohms
±100.0 V	1 M ohm

Linearity: Better than 0.01% full scale from best straight line.

Output Waveform: Separate simultaneous DC coupled positive and negative pulses, 0V to +1.5V and 0V to −1.5V nominal peak amplitudes, each 2 microseconds nominal width, for each quadrant.

Output Response: Essentially instantaneous, output changes to new frequency in less than one cycle of output.

Relay Output: One set of form C relay contacts transfer in accordance with the polarity of the DC input signal.

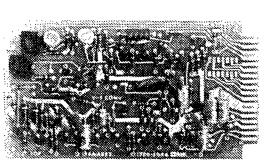
Polarity Indicators: Two lamps mounted on the front panel indicate polarity of the DC signal.

Temperature Range: 0°F to +165°F.

Temperature Coefficient:
Full Scale: Less than ±0.005% per °F over operating temperature range.
Zero: ±10 microvolts per °F (referred to the input) over operating temperature range.

Power: 105-125 or 210-250V RMS, 50-400 Hz.

1700-5044-00 (UNI-POLAR)



- 1 MHz Output Frequency
- All Silicon Solid State
- Compact Size
- 30% Overrange
- High Accuracy and Stability

Price:

1-9	$175.00	20-49	$145.00	100 & Up	$120.00
10-19	$166.00	50-99	$139.00		

Input: 0 to +10V DC, overrange to +13V DC.
Input Resistance: 50 K ohms ±1%.

Output: Negative pulse from +5V DC to ground up to 1 MHz full scale. Pulse duration is 200 ns nominal.

Response: Instantaneous.

Linearity: Better than 0.01% of full scale from best straight line.

Temperature Range: −10°C to +65°C.

Temperature Stability: Less than ±0.007% of reading. ±0.001% of full scale per °C.

Power Required: +15V DC ±0.1% @ 20 ma. −15V DC ±0.1% @ 50 ma.

Mating Connector: Viking #2VH18/ICND3 (Anadex P/N 2103-5010-00, $5.00).

Size: 5.75" x 3.00".

Optional Input Amplifier provides 1 MHz output for 1V DC Input.

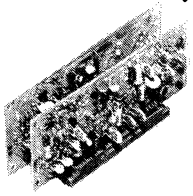
DC TO FREQUENCY CONVERTERS 7000-5072-00 (BI-POLAR)

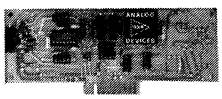
ANADEX
INSTRUMENTS, INC.



- **Bi-Polar Input**
- **1 MHz Output Frequency**
- **0.01% Linearity**
- **Instantaneous Response**
- **Low Cost**

Price: $275.00
Input: 0 to ±10V DC, overrange to ±13V DC.
Input Resistance: 50K ohms ±1%.
Output: Two signals, one for positive inputs and one for negative inputs. Each is a negative going pulse from +5V DC to ground up to 1 MHz full scale, duration 200 ns nominal.
Response: Instantaneous.
Linearity: Better than 0.01% of full scale from best straight line, each quadrant.
Temperature Range: −10°C to +65°C.
Temperature Stability: Less than ±0.007% of reading, ±0.001% of full scale per °C.
Power Required: +15V DC ±0.1% at 70 ma, and −15V DC ±0.1% at 70 ma.
Physical Size: Two cards, each 6.35″ x 2.63″, with edge card contacts on long side. Mating Connector, Viking #2VK10D/1-2 (Anadex 2103-5004-00, $5.00 each).
Options: Three output options and four input amplifier options available, CONTACT ANADEX.

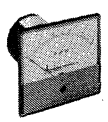
DATA AMPLIFIER SA-100



- **30 Megohm Input Impedance**
- **Differential Input**
- **High Common Mode Rejection**
- **±0.01% Linearity**
- **Four Gain Settings**

Price: $195.00
Input: Differential and may be either floating or grounded. No bias current return path required.
Input Impedance: 30 Megohms.
Sensitivity: ±10 mv to ±10V. Maximum over-voltage of 1000 times full scale or ±25V pk-pk, whichever is less.
DC Gain: Four fixed settings of 1, 10, 100, and 1000.
Common Mode Rejection: At gain = 1000, approx. 120 db.
Output: ±10 volts full scale at 1 ma, short circuit current safely limited. Impedance = 0.1 ohm in series with 50 μhenries. Capacitive load up to 1 μfarad without instability.
Stability: ±0.002% of reading per °C; ±0.01% of reading per month or ±0.02% of reading per 6 months; of initial setting, ±0.1% of reading.
Power Required: +15V DC ±0.1% at 50 ma and −15V DC ±0.1% at 50 ma.
Physical Size: 6.35″ x 2.63″, with edge card contacts on long side. Mating connector, Viking #2VK10D/1-2 (Anadex 2103-5004-00, $5.00).

FREQUENCY INDICATORS PI-100



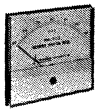
- **Compact**
- **Lightweight**
- **±1% of F.S. Accuracy**
- **Two to One Full Scale Range Adjustment**

Price: $195.00 Includes Mating Connector.
The Anadex PI-100 Series of Frequency Meters offers a complete selection of pulse rate integrators to fill the needs of industry for versatile and reliable indicators of frequency. Direct readout of frequency or normalized frequency, in engineering units, from transducers such as flow meters, tachometers, etc. is provided. Conversion of the input frequency signal to an analog output of DC voltage or current is also provided.

Model	Meter
PI-101, 121 PI-102, 122	3½″ 4½″

Input Sensitivity: PI-101 and PI-102; 0.01V RMS minimum (down to 5 Hz) 30V RMS maximum. Sine wave, square wave and approximations thereof with 20% minimum duty cycle @ minimum full scale frequency. PI-121 and PI-122; Pulse Input, +1.0V minimum, +30V maximum. Pulse duration of 1 μs minimum and 1V/μs maximum rise time. Negative pulse units available on special order.
Input Impedance: 22,000 ohms. Internal clipping of high input voltages prevents damage to the unit. The average input impedance diminishes whenever high input signals cause clipping.
Standard Full Scale Ranges: Maximum upper frequency limits of 50, 100, 200, 300, 500 Hz., 1, 2, 3, 5, 10, 20, 30, or 50 KHz. The full scale of the unit may be adjusted by means of a trimpot at the rear of the unit over a two to one range. Thus, a 1 KHz model may be adjusted for a full scale from 500 Hz to 1 KHz.
Meter: D'Arsonval type with converter integrally mounted.
Scale Plate: Marked 0 to 100, 50 divisions as standard. Special scales available at additional cost.
Pulse Output: A pulse output of approximately 8V pk-pk (+1V to +9V) (from 10K ohms source impedance) is available to drive electronic counters and recorders.
Accuracy: ±1% of full scale.
Power Supply: +22V to +30V @ 30 ma input is standard. Option P provides for a 115V RMS, 50 to 400 Hz power supply.
Connector: MS-3102A-14S-6P (solder header available at no extra charge but must be specified).
Option A: Provides a 0 to +50MV DC output signal from a source impedance of 1,250 ohms, single ended, with a linearity of ±0.25% of full scale. **Price:** $25.00
Option P: Provides compatibility with a 105 to 125V RMS, 50 to 400 Hz power supply. **Price:** $25.00

FREQUENCY DEVIATION INDICATORS PI-111 & 112



- **±0.1% Accuracy**
- **Power Derived From Signal Source**
- **3½″ or 4½″ Wide Meter**

Price: PI-111 $145.00 PI-112 $145.00
Signal Voltage: 105 to 125V AC RMS.
Power Required: 2 watts nominal
Accuracy: ±0.1% of reading.

Model	Meter	Range	No. of Scale Divisions
PI-111-50 Hz	3½″	47.5-52.5 Hz	50
PI-112-50 Hz	4½″	47.5-52.5 Hz	50
PI-111-60 Hz	3½″	57-63 Hz	60
PI-112-60 Hz	4½″	57-63 Hz	60
PI-111-400 Hz	3½″	380-420 Hz	40

Each of the three volumes of **eem** contains a Product Index and Directory, the Green Section. This Index is a complete alphabetical listing of products. If the product you are looking for appears in the particular volume you are consulting, the green pages will provide a complete list of manufacturers who make that product. If the product is included in another volume of **eem**, the Index will provide a cross reference, directing you to the correct volume.

Boldface listings under product headings indicate that the listed manufacturer has products cataloged in **eem. Boldface** listings with page numbers indicate that this manufacturer's catalog pages include detailed data on the product indicated in the product heading.

Similar products are grouped together. For example, the many kinds of meters are listed in this manner: "Meters, Ampere," "Meters, Capacitance," "Meters, Flux" etc. To help you locate the prime product heading, there are hundreds of cross references, e.g. "Voltmeters — See Meters, Volt."

Catalog pages in **eem** are divided into three volumes based on very broad product groupings. These are:

Volume 1 — Test Instruments / Equipment and Systems

Volume 2 — Active Components / Circuit Assemblies / Controls and Drives

Volume 3 — Passive Components / Materials / Hardware

These volumes are further divided into 55 **eem** Product Sections which are assigned individually to the most appropriate volume. Within each of the 55 product sections manufacturers are arranged alphabetically, wherever possible. A complete index of all manufacturers' catalog pages is included in every volume. To locate the catalog pages of a specific manufacturer, refer to this index at the beginning of the white section in any of the three volumes. This index will provide the page numbers you require. In Volume 1, the index begins on page 302, in Volume 2 on page 1274 and in Volume 3, page 2310.

api INDICATING & CONTROLLING INSTRUMENTS

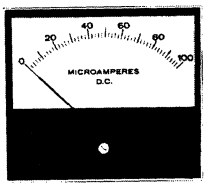
▶ Panel meters

API panel meters have standard 1% tracking and frictionless taut band movement in the most popular DC ranges—20 to 100 μa and 5 to 25 mv. Taut band (not 1% tracking) is standard in ranges between 3 and 10 μa. Most taut band DC meters can be calibrated for 0.5% tracking, 1% accuracy, or 0.5% accuracy. Pivot-jewel movement is standard above 100 μa.

New Series 7000 panel meters

API Series 7000 is an all-new line with forward styling and panel mounting versatility never before available in one meter design. Mounting options are front mount, bezel mount and lens mount. "Stick-on" color plates are offered for front-mounted meters. Other features: field-changeable scales, rugged phenolic cases and fronts, glass windows.

Sizes: Model 7025 (2½"), Model 7035 (3½"), Model 7045 (4½"), and Model 7055 (5½").

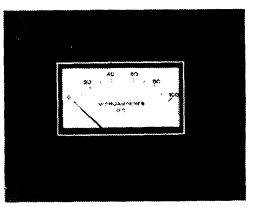


Front Mount.

Other API panel meters

Additional panel meter types include black phenolic in both front mounting and recessed mounting styles, edge-reading models, ruggedized-sealed meters, and VU meters for recording and broadcasting applications. Sizes range from 2¼" to 10" in width.

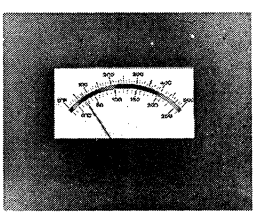
New electronic panel meters, featuring 1% accuracy and 1-second response, are also available. Specify product when requesting literature.



Bezel mount.

Indicating pyrometers

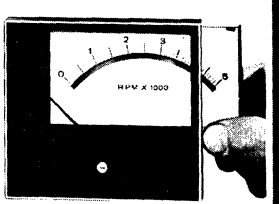
Pyrometers are thermocouple-actuated, all taut band, and both bimetal and thermistor compensated for ambient temperature changes. Standard mirrored scales read both °F and °C. They are stocked in popular ranges, with the same case styles as panel meters. Standard accuracy is 2%, with 1% available. Portable pyrometers also stocked.



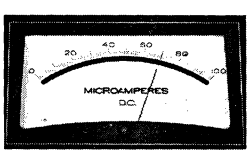
Lens mount.

Meter-relays

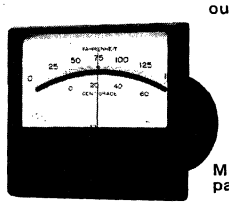
Meter-relay types include the Ultimeter (potentiometric set point), contactless (optical), contacting (locking-coil), and contacting (magnetic), all of which are used with API circuit modules or other control circuitry. Adjustable single or double set points. Specify product when requesting literature.



Series 7000 scales are field-changeable without pointer damage.



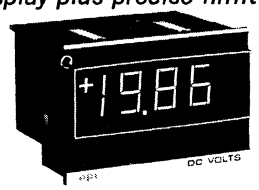
Model 561 panel meter.



Model 503-E electronic panel meter.

▶ Digital products

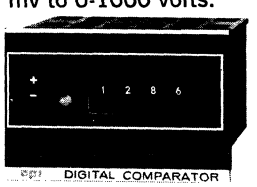
API digital panel instruments combine award-winning design with fine features. Digital panel meters may be teamed with matching comparators for large up-front display plus precise limit control.



Model 4304 digital panel meter.

Model 4304 digital panel meter

Model 4304 has large 7-bar segmented digits with easy-to-read display to ±1999 with 1000-megohm input impedance. Standard features include auto-polarity, 0.1% accuracy, BCD output, 100% over-range, front or rear panel mounting. Ranges are 0-199.9 mv to 0-1000 volts.



Model 4310 digital comparator.

Model 4310 digital comparator

This 4-digit comparator has BCD input 1-2-4-8, algebraic comparison, logic output, 2 amp relay contact, polarity switch, and visual lamp indicators. Logic circuitry is separable. Choice of fixed limit or adjustable thumbwheel limit. Remote programming models available.

7-bar segmented displays

Digital display modules may be used for low cost counters and readouts. Each module provides counter, storage and decoder-driver, BCD output, serial or parallel input, neon lamp, decimal point. Mounting hardware available for multi-decade displays.

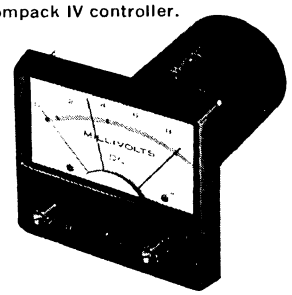
Model 4320 digital temperature indicator

Direct display of temperature with one degree F resolution, electronic T/C curve linearization, up to 0.15% full scale accuracy, and complete isolation between input and digital outputs. Standard features enhance system capabilities: 250 v input to output isolation, buffered BCD outputs, automatic cold junction compensation, 50 megohm input impedance, high common mode and normal mode noise rejection.

Controllers

API solid-state controllers provide many different levels of sophistication for controlling temperature and other process variables. Most temperature control models are thermocouple actuated, with no recalibration necessary up to 100 ohms thermocouple resistance. Quick delivery in standard ranges.

Compack IV controller.



Compack controllers

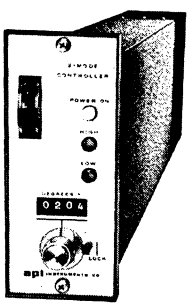
Compack IV On-Off controllers are dimensionally and electrically interchangeable with most controllers incorporating optical meter-relays, but they provide such improvements as 1% accuracy, faster response and solid-state reliability. Other features: switching independent of meter, chopper amplifier input impedance, adjustable single or double set points, self-contained power supply. Available as a thermocouple-actuated temperature controller.

Pyrometer models of Compacks I and II, built around optical meter-relays, offer On-Off, Time Proportioning or SCR driver control action.

Model 232 temperature controller.

Model 232 temperature controller

This low cost controller is designed for industrial and commercial ovens, laboratory environmental chambers, plastics and packaging machines. Built in the USA to DIN dimensions, it provides either relay or SCR type output for On-Off or Time Proportioning control. Standard ranges in stock (minimum span 0 to 300°F). Is also available as FM approved temperature limit.



Model 226—digital set point

Model 227—analog set point

Two-mode temperature controllers

These instruments cover a broad range of applications in plastics, packaging, textiles, hydrocarbons, and many types of furnaces and ovens. Outputs include voltage or current, Time Proportioning zero crossing, Time Proportioning relay, phase-fired pulse.

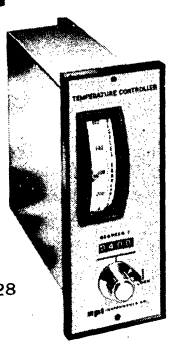
Models 225 and 226 offer field-changeable plug-in cards for ranges, outputs and optional alarm. Other features are adjustable proportional band, adjustable automatic reset, deviation meter. Model 225 has analog set point; Model 226 is digital.

Model 227 is the smallest, lowest priced instrument among two-mode controllers with indicating meters and integral control elements. No adjustments except temperature setting. Analog set point.

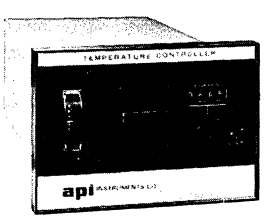
Model 228 incorporates a large indicating meter, 4-digit set point, and offers choice of plug-in output cards.

Model 235 has a 4-digit set point, deviation meter, adjustable proportional band, adjustable reset, choice of output cards.

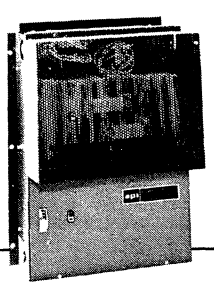
Solid-state power packs, for use with API process controllers, are available in 30, 50, 70 and 100 amperes.



Model 228



Model 235



Model 4011 power pack

INSULATION TESTING INSTRUMENTS

ASSOCIATED RESEARCH, INC.

Insulation Resistance Testers

Ranges from 100 to 10 million megohms at test potentials to 10 KV.

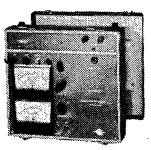
The MEG-CHEK® megohmmeter provides a wide selection of battery and line-powered instruments for accurate insulation resistance measurements of circuits, components, cables, motors, etc. They are direct reading and push button operated requiring no cranking or leveling.

Select from 17 models ranging from pocket-size to portable 10 KV with variable voltage. Some models combine megohm with ohm and AC-DC volt scales in one instrument. Five popular models are:

Model	DC Test Voltage	Max. Megohms	Features	Price
2000	500	100	Pocket-size	$ 95
2201	500	200	Includes 2K ohm and six AC-DC volt scales	165
2211	1000	2000	200 K ohm range	255
2850	500/50	10 Million	Constant test voltage through 6 decades	345
2955	0-2,500	50,000	Adjustable test voltage	890

Request MEG-CHEK Megohmmeter Bulletins by model number.

Portable DC HYPOTS® to 200 KV

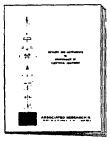


Output of the several portable DC HYPOTS is continuously variable from 0 to maximum with the voltage metered directly in the output. Leakage current measurements are on four range meters reading down to as low as 0.05 microamps. Features: 2% metering accuracies, electronic circuit protection, by-pass and metered return terminals, grounded steel cases, silicon rectifiers, plug-in high voltage leads, etc.

Model	Output Voltage	Output Current	Price
5205	0-5 KV	2.0	$ 550
5212	0-10 KV	2.0	675
5220	0-15 KV	2.0	735
5271	0-50 KV	2.5	2250
5321	0-100 KV	5.0	3115

Request Portable DC HYPOT Bulletins

Testing Manual Available



This 60 page collection of Bulletins covers specs, prices and applications of insulation resistance testers, AC HYPOT Juniors, portable and mobile DC test sets, corona and materials test equipment, kilovoltmeters, precision ohmmeter, current transformers, phase sequence indicators.

Request Manual 2900 on company letterhead

A-C HYPOT Jrs... to 10 KV, limited current

Portable a-c dielectric strength testers providing outputs continuously variable from 0-1500 V up to 10,000 V a-c. Use of neon breakdown and leakage current indicators in conjunction with collapsing field-type high voltage transformers assures rapid and safe production testing.

The leakage current indicator is adjustable from 0.3 to 3 ma. A 4½" kilovoltmeter provides high accuracy. Short-circuit current cannot exceed 18 ma.

Three popular models are:

Model	Output Voltage	Price
411	0-2,500	$175
404	0-4,000	190
422	0-10,000	260

HYPOT Jr. Automatic "Squawker" Models

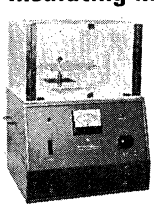
Available with output voltages from 0-1500 volts to 0-6000 volts a-c. Similar to the standard HYPOT Jr. models but include an audible signal unit and external control terminals.

DC and Combined AC/DC HYPOT Jrs.

offer same features as described above, plus test potentials to 5 KV.

Request AC & DC HYPOT Jr. Bulletins.

Insulating Materials Testers



A full range of testers for solid and liquid insulating materials to 100 KV and higher is available. Due to the rapid progress of insulating materials and testing techniques, new equipment is added whenever required to meet ASTM, MIL and Federal test specifications.

Model 4501 Materials Testing HYPOT 0-35 KV at 2 KVA

This popular model meets dielectric strength testing requirements of Specification D-149, ASTM Standards on Electrical Insulation Materials. Output continuously variable from 0-35 KV a-c at 2 KVA (intermittent rating). Magnetic breaker trips when specimen breaks down. Output termination in jacks at center of the lucite cabinet top accepts the interchangeable ARI materials testing fixtures. Optional features: interlocked clear lucite test cage and selection of ARI plug-in materials testing fixtures, automatic rate of rise, dual sensitivity circuit breaker, etc.

Request Insulation Materials Tester Bulletin

High Voltage Test Equipment to 500 KV AC and 1,000 KV DC

A full range of instruments for extra high voltage dielectric strength testing. AC or DC potentials at capacities of up to 150 KVA or more. Control and measurement features include: automatic rate of voltage rise, memory circuit to record breakdown voltage, output current metering, separate low voltage control and high voltage test cabinets and many others.

ARI has over 30 years experience in the design and manufacture of heavy duty very high voltage test equipment. All instruments are ruggedly constructed and fully tested in our own high voltage laboratory.

Corona Testing Equipment

New instruments detect, display and measure corona caused by voids, surface or other conditions in the insulation sample or the equipment under test.

Instruments include: specially constructed corona-free HYPOT test set, a pickup network to extract the true corona signal and the corona detection display module. Detector also incorporates a calibrator to make quantitative corona measurements down to 0.1 picocoulombs.

These modules are available as individual units or as a complete integrated instrument. Standard models with test potentials of 10 to 100 KV AC include these two popular models:

Model	Output KV	KVA Capacity	Cabinet Style	Price
4074	10	0.25	Bench	$2250
4309	35	1.0	Console	3950

Request Bulletin 4-1.9.

Mobile HYPOTS . . . to 150 KV DC

Heavy-duty mobile test sets for determining insulation leakage and dielectric strength of cables, bushings, switch-gear, transformers, motors and generators.

Outputs continuously variable from 0 to 45 KV and on up to 150 KV, with ratings of 2.5, 5, 10 ma. at full voltage.

Features include: 4½" kilovoltmeter connected directly across the high voltage output; three-range 4½" microammeter electronically protected against overload; zero return interlock; connector for remote safety interlock; fast-acting magnetic circuit breaker in output to protect high voltage circuits and external load; thermal overload breaker to protect input circuits; long-life silicon high voltage rectifiers; metered return and bypass return terminals for measurement of load (leakage) or bypass (guard) currents.

Request Mobile DC HYPOT Bulletin 5-1.16.

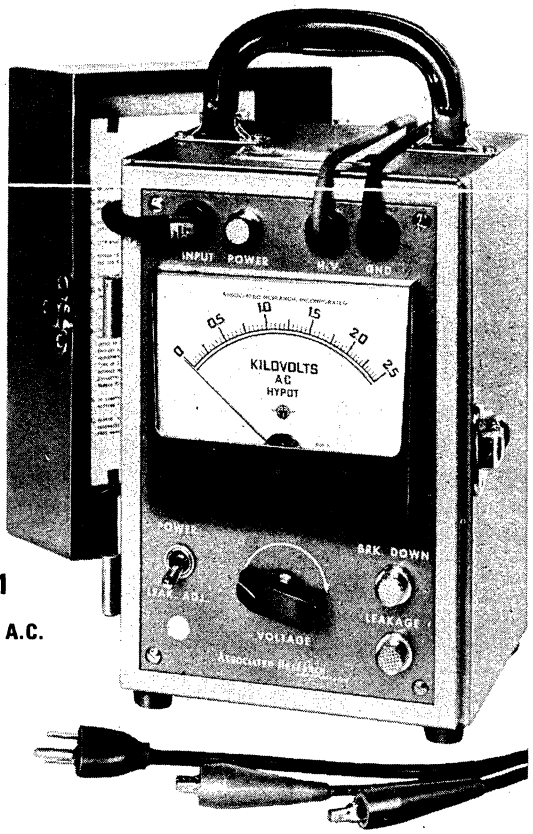
INSULATION TESTING INSTRUMENTS

HYPOT® Junior BREAKDOWN TESTERS



Model 411
(illustrated)
0-2500 volts A.C. output

only **$175**

make faster, safer AC dielectric strength tests of electronic parts and components, small tools, appliances, motors, transformers, etc.

Simple to operate. Make breakdown, leakage and short tests to UL, CSA, ASTM, NEMA, IEEE, MIL and EASA standards. 115 vac, 50/60 cycle input. Continuously adjustable output. Included are: complete metering, controls, safety features, case with removable cover, test leads, line cord, instructions.

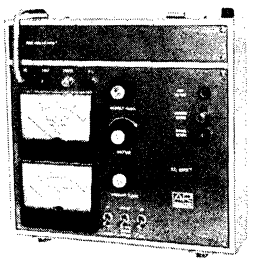
Visual Indicator Models . . . have neon "breakdown" light for breakdown, corona or arcing indication . . . and separate neon "leakage" light for leakage indication adjustable 0.3-3.0 Ma. 5 Models from 0-1500 to 0-10,000 volts output, priced from . . . . . **$165 to $260.**

Automatic "Squawker" models provide audible and visual test indications. 4 models from 0-1500 to 0-6000 volts output, priced from . . . . . **$265 to $290.**

Request Bulletin 4-1.3.

HYPOT® Juniors

with leakage current metering



Two new models incorporate three range micro-ammeters and guard circuits. Both feature:

- low AC leakage current measurement
- external guard circuit to eliminate stray leakage current
- accuracy of ± 3% F.S. on voltage and current ranges

Model No.	Output Voltage	Leakage Current Ranges	Price
4006	0-0.75/1.5 KV	0-50/500/5000 microamps	$415.00
4030	0-2/4 KV	0-50/500/5000 microamps	$495.00

Request Bulletin 4-1.10.

MEGOHMMETER Model 2850

measures insulation resistance to 10 million megohms

only **$345**

Advanced features:

- **constant test voltage over full range**
- **no overload damage**
- **positive line-voltage control**
- **maximum guarding flexibility**
- **latest tube-miniaturization techniques**

Versatile, accurate, reliable. Dual test voltage . . . 500 vdc and 50 vdc. 24" total scale length . . . 1 to 10,000,000 megohms in 6 decades. 115 vac, 50/60 cycle input. Measures resistance on printed circuits, transistor and miniaturized circuit components, cables, motors, etc. Measures leakage resistance of capacitors. Measures grounded and ungrounded sections of three-terminal resistors.

Also available: Model 2851 with 100 vdc and 500 vdc dual test ranges . . . . . only **$355.**

Request Bulletin 2-1.4.

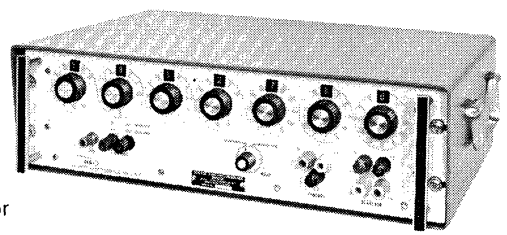
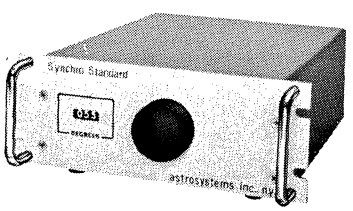
Advanced Test Instrumentation

Decade Synchro/Resolver Standards and Bridges



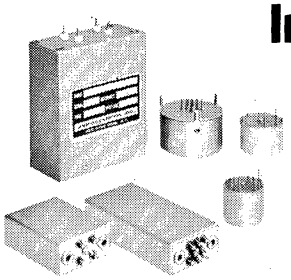
These devices are completely passive instruments for testing and simulating synchro/resolver systems to absolute accuracies of 2 seconds of arc. Units are available with 1° to .0001° resolution and feature direct angular readout. The units employ a unique toroidal ratio transformer technique to generate synchro and resolver voltages or discern synchro angle errors. Uses cover a wide range of applications for both laboratory and in-the-field use. Write for Data File No. 105.

Synchro and Resolver Standards and Bridges



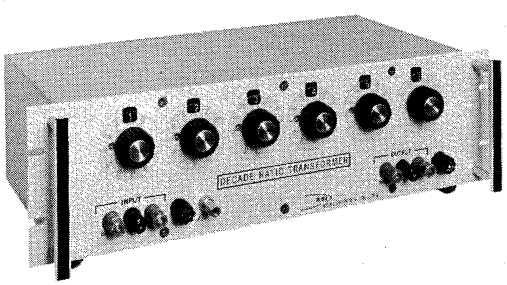
Synchro and Resolver Standards and Bridges test and simulate synchros, resolvers and servo systems quickly and economically. All units are accurate to 2 arc seconds, traceable to the National Bureau of Standards. Units are available with 5°, 10° and 15° resolution to cover a wide range of applications for both laboratory and system use. Write for Data File No. 105.

Instrumentation Transformers



Astrosystems high precision toroidal transformers are produced to accuracies of better than 0.5 parts per million. Available are matched high precision isolation transformers, bridging transformers, high precision voltage scaling transformers and Scott "T" transformers. Write for Data File No. 117.

Decade Ratio Transformers



Extremely precise and stable inductive voltage dividers, these units are suitable for use as laboratory standards, as well as for any application requiring highly accurate AC voltage measurement. Instruments can be precisely calibrated initially and will remain remarkably stable with respect to time, temperature, humidity, vibration and shock. Available in High Voltage, Universal, High Accuracy Laboratory Standard, and Thumbwheel models. Write for Data File No. 106.

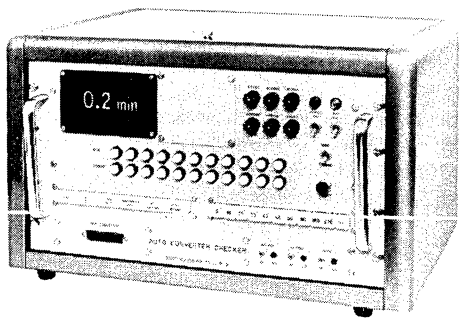
astrosystems

Automatic Test Instrumentation

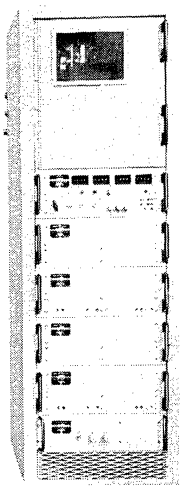


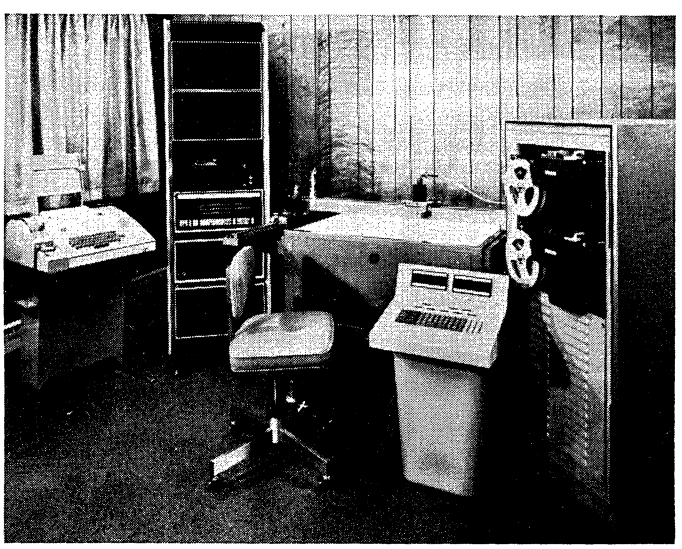
Automatic Converter Tester

Automatic Converter Testers are completely self contained devices for laboratory or production testing of all types of synchro, resolver and voltage digital conversion equipment. The units feature push button selection of tests such as accuracy, phase shift and transformation ratio, with an in-line decimal display of error in actual measurement parameters. Write for Data File No. 107.

Automatic Test Systems

Astrosystems designs and manufactures complete general purpose and special purpose automatic test systems. These units are constructed from standard building blocks and provide programming, stimuli, measurement and recording functions. Programming and data readout can be tape or computer controlled. Simple programming allows tests to be accomplished by relatively unskilled personnel. Data File No. 107.





Computer Controlled Circuit Test Systems

Astrosystems designs and produces automatic circuit test systems controlled by general purpose computers. These systems can be operated, controlled and programmed by test engineers and technicians unfamiliar with computers and computer terminology. A unique interactive communication system is employed which uses only English language and is completely unit-under-test oriented. The economical way to automate production testing, the systems perform go/no-go as well as diagnostic tests. Send for Data File No. 123.

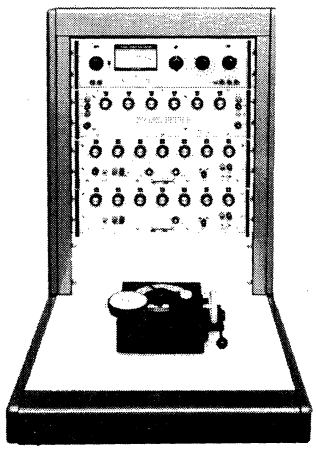
astrosystems

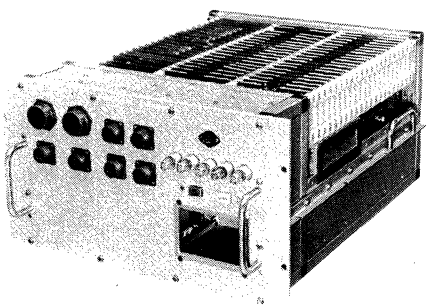
Automatic Test Instrumentation

Synchro/Resolver Test Stands



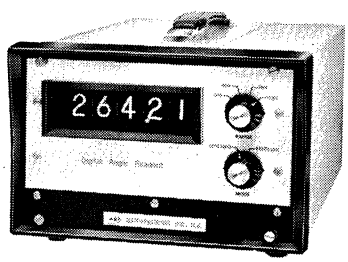
Astrosystems designs and produces standard and custom synchro and resolver testers. These devices measure synchro/resolver parameters such as accuracy, phase shift and transformation ratio. Indexing tables are also supplied as part of complete synchro/resolver and servo test systems. Options include error printout and computer control. Write for Data File No. 107.

Automatic Test Building Blocks



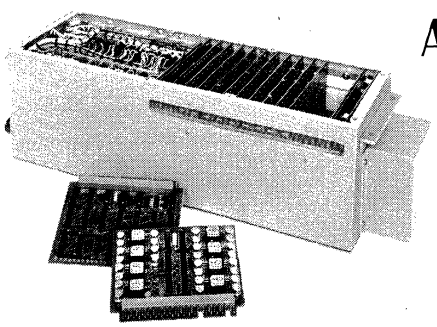
Building blocks are available for use in general purpose and special purpose automatic test systems. Devices include stimuli equipment such as synchro simulators, programmable AC voltage generators, programmable power supplies and automatic servo inputs. Measurement devices include voltage measuring blocks, response monitors and phase indicators. Write for Data File No. 107.

Automatic Synchro/ Resolver Bridge



The Automatic Synchro Resolver Bridge reads out synchro or resolver inputs on a direct in-line decimal display to an accuracy of 0.01°, completely automatically. This solid state readout eliminates the necessity for complex manual setting of synchro bridges and error detectors. BCD or binary electrical digital outputs are provided. Write for Data File No. 110.

Automatic Synchro/Resolver Converters



Automatic Synchro/Resolver Converters provide for programmed synchro/resolver outputs and measurement of synchro/resolver inputs in the same unit. These solid state devices are available with resolutions and accuracies to 16 binary bits (20 seconds of arc). Standards units cover the frequency range from 50Hz to 10K Hz without deterioration in accuracy. Write for Data File No. 107.

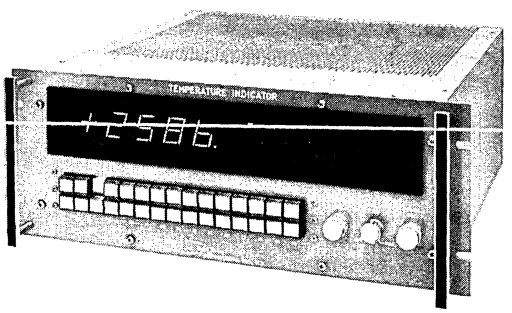
Process Control Instrumentation

Transducer Indicators



These solid-state multiplexed multi-channel Transducer Indicators are ideal for use wherever accurate readings must be obtained from transducers at a variety of remote locations and fed to an on-line computer for monitoring or automatic process control.

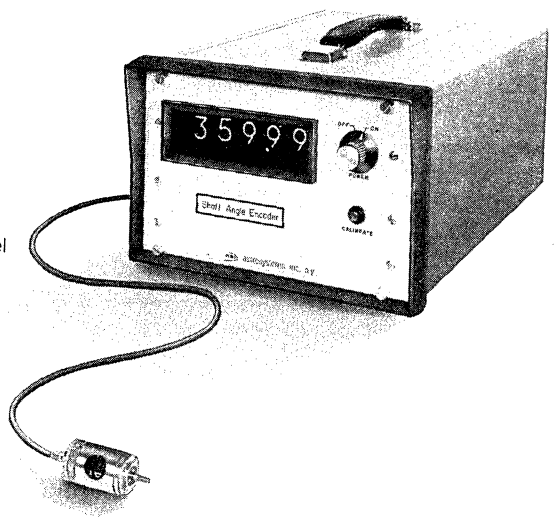
Inputs to the indicators can be obtained from thermocouples, strain gages, potentiometers, flowmeters, tachometers or any other type of DC or frequency transducer.

Input transducers can be scaled to read out in any desired engineering unit and each channel can have a different scale factor and engineering unit. Frequency multiplication is accomplished by a digital technique which is not effected by temperature or power supply variations. Accuracy is limited only by the resolution of the converter. The basic unit has a 4 to 32 channel capacity and can handle up to 200 channels through the use of an additional multiplexer chassis.

The unit can operate in both the automatic and manual mode simultaneously. It is possible to call up any desired channel for visual display while the unit continues to operate in the automatic mode without interruption. Designed for rack mounting, the unit weighs 40 pounds. Write for Data File Nos. 121, 131 and 132.

Shaft Angle Encoders

Unique, solid state encoders which are completely self-contained systems for transforming shaft rotations into a direct decimal visual display with a parallel digital output capable of feeding computers, printers and various types of off-line equipment. A magnetic transducer is used for long life and high reliability. Angle measurement is absolute and tracking, to high resolution and accuracy. Options include zero reset and a wide variety of accuracies, resolutions and scale factors. Write for Data File No. 114.



Data Logging Systems

High capacity, flexible data logging systems can accept many analog inputs of various types as well as digital inputs, and will print out at settable intervals all channels on an output device. The systems also contain a visual display which can be used to read out any selected channel. Printout devices of any type can be mini-Computer controlled. Write for Data File No. 133.

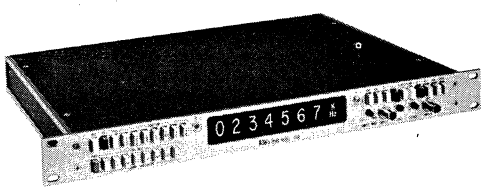
astrosystems

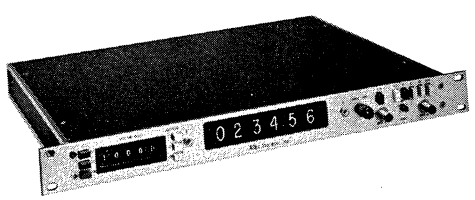
Atec sets the standard for Digital Counting Instruments...

Counters, Timers, Clocks, Totalizers, Comparators

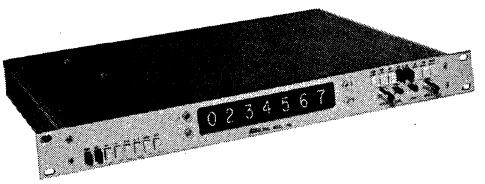
Precision and reliability in digital instrumentation at economical prices—that's Atec. *Versatility:* each instrument performs many functions. *Flexibility:* such features as extra digits, display storage, and high stability frequency standard may be added at any time. *Modern Design:* extensive use of IC's; standard plug-in modules; motherboard PC construction to minimize wiring. *Extra Features:* remote programming, BCD output at TTL levels, inline readout, and self-testing are user benefits from Atec digital counting / timing / totalizing / sampling / comparing instrumentation.



Universal Counter Model 2000 provides six measurement functions: frequency, period, multiple period, time interval, ratio, scale (totalize) at frequencies up to 12.5 MHz. Registers and displays five decimal digits (up to seven optional). Inputs from 0.01 V RMS to 125 V RMS, AC or DC coupling. Crystal-controlled 1 MHz oscillator as frequency standard with excellent time, voltage and temperature stability. Price: $850.



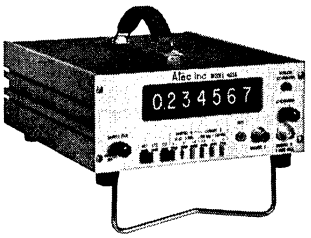
Variable Time Base or Rate Counter Model 2300 measures rate data over a wide range of counting intervals, 100 seconds down to 10 microseconds. Registers and displays four decimal digits (up to six optional). Rates to 12.5 MHz. Inputs from 0.01 V RMS to 125 V RMS. Frequency standard is 100 kHz crystal-controlled oscillator. Manual or remotely programmed control of gate time, multiplier, reset and storage. Price: $940.



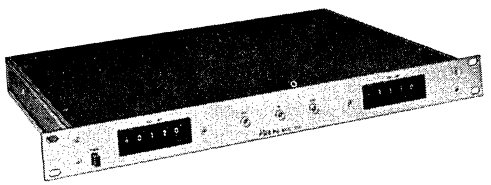
Bi-Directional Totalizer Model 2400 offers manual or remote selection of six operating modes: A+ adds pulses to register total at rates up to 10 MHz; A− subtracts pulses from register, 10 MHz maximum rate; other modes, 3 MHz maximum rate: A + B sums pulses at Inputs A and B and adds them to register; A−B adds pulses at Input A, subtracts at Input B; A quad B adds or subtracts pulses, depending on phase relationship; A as a function of B, pulses added or subtracted based on levels compared to threshold. Price: $895.

Time Interval Meter Ultra-precise resolution from 0.1 microseconds to 10^8 seconds is possible with Model 2503, used for such measurements as ballistic velocities, acceleration rates, nuclear phenomena, relay response times and many other transients. Inputs are adjustable for level, slope, polarity and coupling to trigger exactly at desired point on input waveform. Readout in milliseconds. Manual or remote programming. Price: $595.

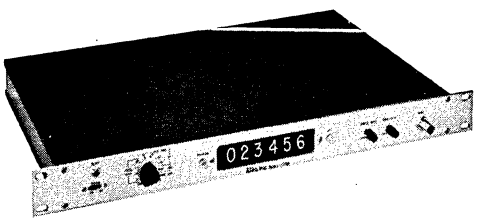
Universal Reciprocal Rate Meter Model 2310A is one of a family of instruments designed specifically for high speed, high resolution rate measurements of low frequency inputs. Multiple period measurement results are multiplied by a constant (K) factor for display directly in engineering units such as RPM, CFM, GPM, etc. Typical compute times are far less than one second. Other models monitor and control multiple flowmeter and other staging operations with the same speed and accuracy. Analog and digital electrical outputs are available. Price: $1575 (Single-Channel)



500 MHz Electronic Counter Model 4058 is an all solid-state frequency counter covering the entire range from 10Hz to 500MHz. Input sensitivity is 100mV RMS over the entire frequency range. A front panel lamp indicates when the maximum input is being exceeded. Three selectable gate times per input allow selection of various readout resolutions. Deluxe features such as a temperature compensated crystal oscillator, self-test, display storage, carrying strap, and "stand-up" bale are standard. Small and compact, the unit weighing only 8½ lbs. was designed primarily for fast and accurate frequency checks of transmitters and for field service. Price: $1445.

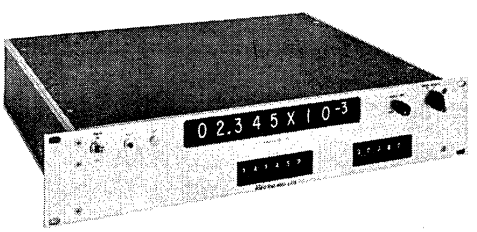


Digital Comparator Model 3200 is one of four comparators which generate output control signals ("Go-No-Go" or "High/Low/In" limits) based on input data and preset limit values. Measurement comparisons are made by parallel computation (as opposed to coincidence logic) permitting moving or static BCD inputs to be compared to preset limits. Models 3200 (dual limit) and 3201 (single limit) are priced at $625 and $425; Models 3202 (dual limit) and 3203 (single limit) provide algebraic comparisons and interface with bi-directional totalizers and digital voltmeters, and are priced at $825 and $525.



Counter/Timer Model 2200A is a general purpose counter/timer with a range of from 5 Hz to 35 MHz. Standard features include display storage, remote programming, BCD output and a crystal-controlled time base. Measurement functions include frequency, period averge, totalize and timing. The standard Model 2200A provides 5-digit readout but a sixth is available as an option. Price: $495.

Universal Preset Counter The Model 2304 measures period, batch, rate, a preset number, ratio, and it totalizes. Frequency response is from DC to 15 MHz. Front-panel preset switches allow the operator to vary the time base for rate measurements, or to preset the digits representing a "batch" size. The instrument can also be used to measure the time required for a selected number of events to occur. BCD output is provided. Price: $1090.



Computing Angle Indicator Model 4105 utilizes an optical shaft encoder to resolve angular position to a tenth of a degree, then multiplies the angle by a selectable K factor for solution of various functions. Any START angle can be referenced by thumbwheel switch selection. Digital electrical output is standard, while a bi-polar (0 to ±50mV) analog output with seven selectable full-scale settings is optionally available. Price: $1985

Densitometer Model 1117B, in conjunction with a digital density transducer, measures gas density in a sample chamber over the range 0.00001 lbs./ft³ to 10 lbs/ft³ with resolution of 0.00001 lbs/ft³. A multiple period measurement of the density transducer output is converted directly into engineering units by use of K and OFFSET factors. Crystal-controlled oscillator, BCD electrical output and storage are standard. Price: Approximately $2000 including transducer depending upon transducer housing.

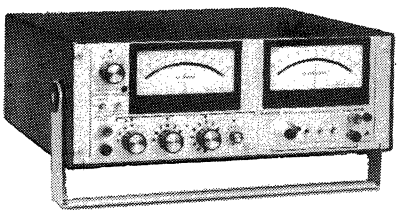
BAFCO FREQUENCY RESPONSE ANALYZERS



Common features of BAFCO Frequency Response Analyzers include:
Low distortion (no sharp spikes) **calibrated** test signals (±30 ma.) —
Continuous and **simultaneous availability** of all **outputs** —
Automatic noise and **harmonic rejection** (≥ 40 db) resulting from **FOURIER** analysis of return signal.
Most models are complete in basic sizes of 5¼" high, 13" deep, and are portable and rack mounting.
There is a Bafco F.R.A. to meet your measurement needs.

ANALYZER TYPES	FREQ. RANGE	OPTIONS	APPLICATIONS	PRICE
SINGLE CHANNEL: MANUAL OPERATION, POINT-BY-POINT **910A** — Lowest cost one channel analyzer for the rapid and accurate measurement of frequency response. Results in Cartesian coordinates — in-phase and quadrature.	0.1 to 20,000 Hz	Carrier 50 to 10,000 Hz.	Passive and active networks, feedback control systems and components; audio systems and components.	**$1975**
910B — Identical to 910A with polar coordinate readout of phase and amplitude.				**2450-2875**
911A — Universal F.R.A.: very fast operation. Includes carrier and outputs of square and triangle waveforms. Direct reading phase and amplitude.	0.01 to 10,000 Hz	DC ~ Log Freq. DC ~ Amp Ratio (db ± 60).	Universal: all feedback control systems (DC and carrier) for very rapid results to 0.01 Hz. Portable for field use.	**3950**
911AD — Identical with 911A, but with digital readout of amplitude (direct reading) and phase (degrees).				**4450**
911A2D — Identical with 911A but with dual digital readout of amplitude ratio (db) and phase.				**5750**
SINGLE CHANNEL: MANUAL OPERATION, SWEEP FREQUENCY **911GO** — Sweep with direct plotting of amplitude (db) and phase vs. log frequency. Expandable to all 911G capabilities.	0.005 to 10,000 Hz	Expandable to all 911G options.	All feedback control systems and components for direct plot of results vs. log frequency.	**7250**
SINGLE CHANNEL: PROGRAMMABLE **911AC** — Digital computer programmable. Three 16 bit words program frequency, waveshape, amplitude of test signal and mode of operation. Program held until changed. Readout of phase and amplitude in two 16 bit words.	0.01 to 10,000 Hz	Program offsets, program carrier, front panel control and readout.	Digital computer testing of systems and components.	**7950**
911APD — Relay and DC voltage programmable. Front panel operation as 911AD. Remote programming on any one or more functions. Suitable for stepping switch program of fixed set of frequency response test points.		DC ~ Log Freq. DC ~ Amp Ratio (db ± 60).	Repeated frequency response testing from programmer.	**6450**
TWO CHANNEL: MANUAL OPERATION, SWEEP FREQUENCY **911G** — Lowest cost two channel F.R.A. Point-to-point measurement of amp ratio (db) and phase shift. Plots results vs. log frequency. Rapid at low frequencies.	0.005 to 10,000 Hz	Carrier. Hyperbolic sweep. Input filters, matched bandpass Multi (> 2) channel.	Point-to-point measurement directly in closed loop operation. Direct plot of result vs. log frequency. Applicable to all frequency response measurements.	**9250**
TWO CHANNEL PROGRAMMABLE, POINT-BY-POINT OR SWEEP **911GP** — Relay and DC voltage programmable: front panel operation as 911G. Any or all functions remotely programmable. Ideally suited to stepping switch command of repeated sequences of frequency response tests.				**11,300**
911G SERIES — MAJOR OPTIONS **OPERATION FROM TAPE** — Complete two channel F.R.A. from tape recorded frequency response test data. Plots amp ratio (db) and phase shift vs. log frequency from tape.			Multi-channel analysis from one test run such as modal analysis of large structures or autopilot system study. For Co and Quad response of structures down to 0.005 Hz.	**+2400**
COMPONENTS COMPUTER — Generates in-phase and quadrature components of Ch. #2 with respect to Ch. #1.				**+2250**
TWO CHANNEL SWEEP WITH AUTOMATIC GAIN CONTROL **912 — Mechanical Impedance Analyzer:** ≥ 60 db in each channel with ≤ 0.5 db error. Complete sweep controls with meter and DC outputs for plot of amp ratio (db) and phase shift vs. log frequency. Single 5¼" high unit.	1.0 to 20,000 Hz	Digital readouts.	Mechanical Impedance over ± 66 db with AGC. Switch for Ch. #2 / Ch. #1, ∫ Ch. #2 / Ch. #1, and Ch. #2 / ∫ Ch. #1.	**6250**
MAJOR OPTIONS — Track from sine wave; track from noisy reference; amplitude control of Ch. #1 thru shaker.				

Also available are F.R.A. systems that will: synchronize to mechanical drives; perform multi-channel analysis; are self checking, with printout of results and interfacing to computers.

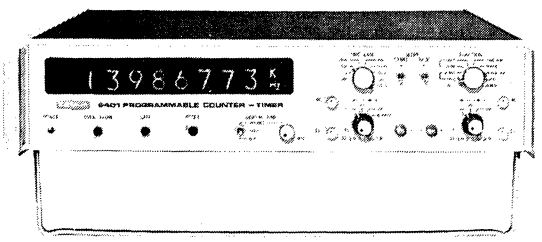
Beckman®

ELECTRONIC INSTRUMENTS DIVISION

INSTRUMENTATION

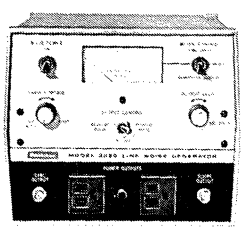
MODEL 6401/6401A UNIVERSAL COUNTER/TIMER



Model 6401 is a programmable 136 MHz counter/timer with two input channels, allows frequency ratio and time interval measurements between two signal sources. Either channel measures frequency, time interval, period, period average, and ratio. Inputs range: channel A, dc to 136 MHz; channel B, dc to 10 MHz. Accumulates random pulses as narrow as 4 ns width and separation. Trigger point monitor lamps visually indicate channel activity. Eight-digit display. Sensitivity: 100 mV rms. Provision for external recording. Frequency accuracy is 1 part in 10^8 for 24 hours. Operates at 120/240 Vac, 60 Hz.

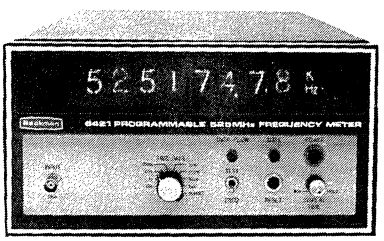
Model 6401A has the same specifications as 6401 with the added feature of 10 ns resolution on time interval and period measurements.

MODEL 3020 LINE NOISE GENERATOR



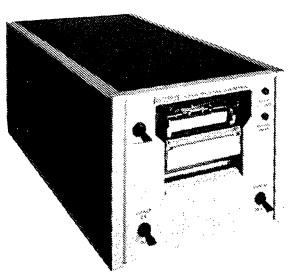
Line noise generator serves dual function: generates controlled line noise similar to rectifier or SCR noise on ac power lines, and measures noise up to 1 kW peak power. Operates from 120/240 V, 50-60 Hz, 60 W. Pulse amplitude continuously variable 0-600 V with rise time 1 μs. Positive or negative noise pulse positions manually adjustable through 360° of line cycle. Measures peak line or load noise. 1 μs width at ±5%. Rejection more than 40 dB between line and load. Manual or automatic control provided.

MODEL 6421 FREQUENCY METER



Direct counting 525 MHz frequency meter with all operating functions contact closure programmable this unit can be used as a bench instrument or an integral part of an automatic measuring system. An optional battery pack is available if portable operation is required. Measures frequency from 10 Hz to 525 MHz: Sensitivity 50 mV rms Input impedance 1 MΩ shunted by 12 pf: Measurement rate 0.1 Sec to 10 Sec: Gate selection 1 MSec to 10 Sec in decade steps: Stability 1 part in 10^6 per year. Power 115/230 V 50-400 Mz.

MODEL 1454 DIGITAL PRINTER



- 21 BCD Column Capacity
- Flexible Input Format
- BCD Column Expansion Capability
- Decimal Point, Column Suppression, and Red Print Control

Universal 21 column digital printer that accepts data in 1248, 1224, 1242 BCD or ten line decimal codes. Standard BCD column capacity is 7, expandable in seven-column increments to a maximum of 21 BCD columns. Input levels can be specified at IC levels, transistor levels, or vacuum tube levels. Printing rate is 3 lines per second in black and 2.8 lines per second in red. Ribbon and paper tape can be replaced without disassembly. Power requirements are 115/230 VAC, 50 to 100 Hz, 60 W (fused).

The Electronic Instruments Division of Beckman produces electronic instrumentation and components for a variety of industrial and space-defense applications.

Products include:

- Digital Frequency and Time Meters
- Digital System Elements
- Amplifiers
- Signal Conditioners
- Communications Test Equipment
- Electronic Counters
- Digital Printers
- Noise Generators

HELPING SCIENCE AND INDUSTRY IMPROVE THE QUALITY OF LIFE

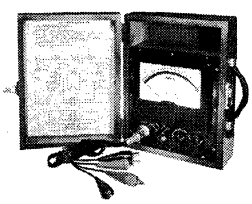
Beckman® ELECTRICAL TEST EQUIPMENT & POWER SUPPLIES

WHEATSTONE BRIDGE — Model RN Series

Universally use for the measurement of all types of resistance devices and circuits where high accuracy is required. Models available for performing Murray and Varley Loop tests.

Model	Total Resistance of Decade	Ration Dial Settings	Circuits
RN-1	9 × (1 + 10 + 100 + 1000)	.001, .01, .1, 1.0, 10, 100, 1000	—
RN-2	9 × (1 + 10 + 100 + 1000)	.001, .01, .1, 1.0, 10, 100, 1000, M10, M100, M1000	Murray & Varley
RN-3	10 × (1 + 10 +100) + 9 × (1000)	1/1000, 1/100, 1/10, 1.9, ¼, 1/1, 10/1, 100/1, 1000/1, M10, M100, M1000	Murray & Varley

LOW RESISTANCE OHMMETER — Model LRO-1

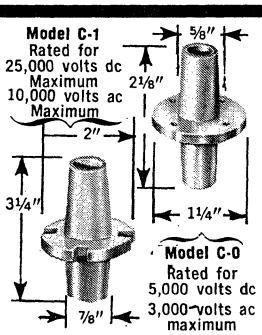


For measuring resistance of sensitive relay contacts, fuses, bus-bars and connections, rail joints, pipe or conduit, switch contacts, transformer windings, motor windings, bonding, grounding and similar applications. Current through the unknown resistance never exceeds 110 ma. Extreme accuracy. Self-contained, including 1½ V flashlight battery. Ranges: 0.1 ohm, 1 ohm and 10 ohms. 100 meter scale divisions. One scale division on 0.1 ohm range is 0.001 ohm. Accuracy ±½% based on full scale values.

HIGH VOLTAGE COMPONENTS

These high voltage connectors are sturdily constructed of Modified Diallyl Phthalate for superior arc resistance and low power factor. Highly temperature resistant, they will safely stand soldering iron temperatures for brief periods. Miniature physical size is combined with extra long air paths. Sealed center conductor will handle up to 20 amperes. Neoprene gasket included for mounting on oil-filled tanks. Easily mated with any standard banana jack for quick disconnect, or 10/32 machine bolt for permanent service.

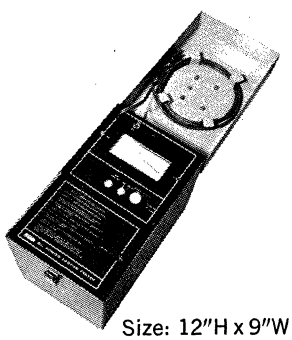
Available in 10 colors.



PF-1 OIL POWER FACTOR TESTER

A low-cost, portable, direct-reading instrument for measuring the percent power factor of insulating oils. Adjusts to 3 power factor ranges — 0-1%, 0-3% and 0-10% — which cover the widest range of insulating oils, from new-and-unused oils to "in-service" oils. It's rugged, operates on standard 110-volt current, and weighs only 37 pounds. Eliminates the need to bring samples back for laboratory evaluation on expensive equipment.

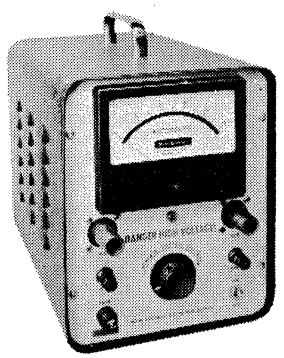
The PF-1 Tester is also fast and simple to operate. Does not require skilled operators. All calculations are eliminated since the instrument reads directly in "percent power factor." Usually, less than two minutes are needed for each measurement. Quick checks are possible on field transformers, capacitors, etc.



Size: 12"H x 9"W x 17"L

PORTABLE HIGH VOLTAGE DC POWER SUPPLIES

These general purpose supplies are particularly suited for laboratory or production line use to provide a convenient source of high voltage, low current dc power. Widely used for such applications as powering photomultiplier tubes, image intensifiers, condenser chargng, and routine insulation breakdown testing.
Voltage readings are indicated by a 6" precision mirror scale kilovoltmeter of 1% accuracy. Polarity is reversible from the front panel (patent applied for). An ac input protection fuse is included as well as a built-in limiting ballast lamp restricting maximum current output levels. These levels may be adjusted by changing ballast. A single control allows continuous adjustment of output voltage from zero to maximum rated voltage.
The output is unregulated (regulation is 20% for 10 to 100% loading). Current rating is 5 milliamperes. The ripple is 5% (rms) at full voltage and current load.



MODEL	OUTPUT VOLTAGE	OUTPUT CURRENT	DIMENSIONS H x W x D	NET WGT. (Pounds)	INPUT POWER REQUIREMENTS
6005-5MA-MS	0-5KV	5 MA	11" x 9" x 13"	17	115 V, 50 Hz, 100 watts
6010-5MA-MS	0-10 KV	5 MA	11" x 9" x 13"	23	115 V, 60 Hz, 100 watts
6015-5MA-MS	0-15 KV	5 MA	11" x 9" x 13"	23	115 V, 60 Hz, 150 watts
6025-5MA-MS	0-25 KV	5 MA	11" x 9" x 13"	34	115 V, 60 Hz, 150 watts

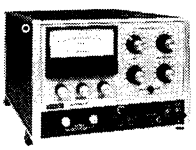
Beckman®

INSULATION TEST EQUIPMENT

WIDE RANGE MEGOHMMETERS Model L Series

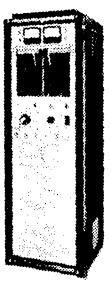


Including Digital Readout. Designed for laboratory and high speed testing of motor and transformer winding insulation, cable insulation, high value resistors, capacitor insulation, and for the measurement of surface and volume leakage of insulating materials. Meets requirements for testing insulation resistance in accordance with ASTM D-257, and Federal Spec. LP-406B, Method 4041.

Model	Test Voltage	Resistance Range Low	Resistance Range High	Power Cons.
L-6C	100 to 600*	1 meg.	100,000 meg.	80 w.
L-7	100 to 600*	1 meg.	$5x10^{13}$ ohms	75 w.
L-8	10 to 1000**	10^3	10^{14}	35 w.
L-9†	10 to 1000**	10^6	10^{14}	145 w.

*Continuously variable, built-in voltmeter for accurate setting.
**Continuously variable, selectable by switch.
†Features digital readout, automatic or manual range selection.

AC BREAKDOWN TESTERS Model PA Series



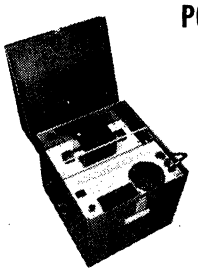
Type PA variable high voltage AC breakdown testers are designed to meet the requirements of ASTM specification D-149, and Federal specification LP-406, Method 4031, as well as all general purpose breakdown testing. Provided with motor-driven control of output voltage with any desired rise of secondary voltage. Available with wide variety of testing jigs.

PA-5-152	15,000 V. rms. 2KVA
PA-5-155	15,000 V. rms. 5KVA
PA-5-252	25,000 V. rms. 2KVA
PA-5-255	25,000 V. rms. 5KVA
PA-5-502	50,000 V. rms. 2KVA
PA-5-505	50,000 V. rms. 5KVA
PA-50-1005	100,000 V. rms. 5KVA

For even greater versatility, dual range units using multiple winding transformers are available on order. These provide two meters and a total of six scales. Typical dual-range models as follows:

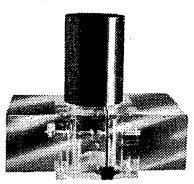
PA-5-252/052	25 kv or 5 kv rms. 2KVA
PA-5-502/102	50 kv or 10 kv rms. 2KVA
PA-50-5010/1510/510	50 kv or 15 kv or 5 kv rms. 10KVA

PORTABLE OIL TESTER — MODEL P-8



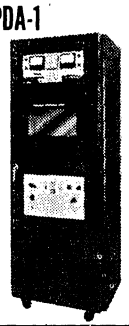
Provides three methods for determining dielectric strength and breakdown voltage of insulating liquids. All HV components housed within cabinet. Interlock system protects personnel. Meets requirements of ASTM specifications D-149 and D-877. Maximum test voltage: 50,000 volts. Accuracy: ±10% of voltmeter reading. Operates on 120 volts, 50/60 Hz, single phase.

JE ELECTRODE



Oil test electrode permits dielectric breakdown acceptance and evaluation tests on liquid dielectrics using the ASTM-1816 (VDE) method. Features adjustable, spherically-capped electrodes capable of testing with 0.080" spacing. The cell body is constructed from a solid block of lucite, eliminating mechanical or bonded fabrication and assuring virtual leak-proof operation. A motor driven stirrer provides constant mixing. When used in connection with Beckman's Model P-8 Portable Oil Tester, the new electrode provides a compact, portable, reliable 50KV oil test set capable of laboratory, production and in-field testing.

DIELECTRIC BREAKDOWN TESTER Model PDA-1



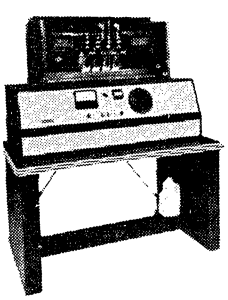
Designed to provide simple, safe, accurate means of determining dielectric strength and breakdown voltage in the laboratory or factory (conforms to requirements of ASTM specifications D-149 and Federal specification L-P-406 method 4031).

Push button selection — four different leakage current meter ranges (six operating modes) — enclosed test cubicle, fail-safe circuitry, interlocked doors and oil immersed gravity-drop shorting switch allows safe use by unskilled personnel.

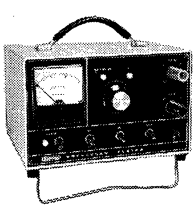
- Continuously adjustable (automatic or manual) test output voltage control uses full 100% rotation to allow fine control for critical testing (choice of AC or DC).
- Provides for transient suppression and introduction of non-linear resistance into transformer.
- Maximum versatility of test jig set-up using plug-in jigs or high voltage cable to external "hi-pot" testing circuits.
- Self contained unit — portable yet provides easy access to all parts for maintenance.

TRACKING and EROSION RESISTANCE TEST -- TERT-1

Evaluates relative track and erosion resistance of various materials using Liquid Contamination Inclined Plane method described in ASTM and IEEE specifications. Test represents service exposure evaluation of wide range of insulated material subject to AC surface current. Test conditions simulate water film on insulation surface in which ionizable and other contaminants may dissolve. Contaminant rate easily controlled to simulate different service stresses and outside conditions. Tests conducted on 2" x 5" specimen; actual test covers 1" x 2" track area. Test criteria is either "time to track a fixed distance at a fixed voltage," or "voltage to initiate tracking" — depending on specific service requirement evaluation.



VOLTAGE BREAKDOWN TESTER — Model P-2B

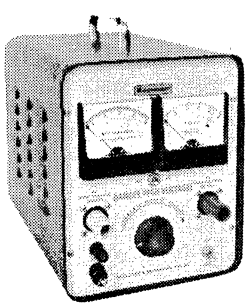


Furnishes adjustable ac or dc test voltage for determining capability or in flashtesting capacitors and insulating materials. Completely solid-state, no relays or circuit breakers. Continuously adjustable, metered output. Breakdown indication provided.

SPECIFICATIONS

Model	Voltage Range* ac (rms)	Voltage Range* dc	Input Power Required
P-2B	0-3000	0-4000	120/240 V, 50/60 Hz

* Metering Accuracy ±5% Full-scale.

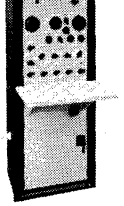


INSULATION TEST SETS

Used in testing insulation where AC voltages are desired. Dual instruments are also available which provide choice of AC or DC output. Includes kilovoltmeter, current meter and automatic overload limiter circuits. Metering accuracies are ±3%. The basic model number covers AC types. Add the prefix AC/DC to the basic model number for the dual output type.

Model	Type	Voltages	Current Meter
3000	AC or AC/DC	0 to 3,000	10 MA
1000	AC or AC/DC	0 to 10,000	10 MA
2500-DC	DC only	0 to 25,000	100 μA

HIGH VOLTAGE SCHERING BRIDGE — Model PS-1GP



Used to measure dissipation and capacitance of electric insulating material while subjected to high-voltage stress. From these two measured values and the dimensions of the sample and test electrodes, dielectric constant, loss factor, and other values may be calculated.

Exceptionally wide capacitance range from 0.0000025 to 1.0 mfd. Built-in shunts for testing large capacitances without additional equipment. Materials can be tested at operating value. Easy-to-operate, all controls located on front panel. High accuracy, plus or minus 0.2% capacitance accuracy and 2.0% or better tangent accuracy.

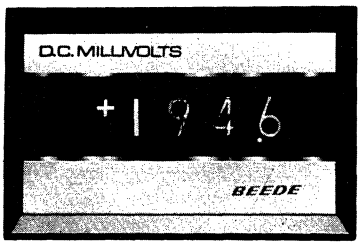
BEEDE . . . Value by Design

DIGITAL PANEL METERS (Standard Units now stocked)*



The Beede Digital Panel Meter is a precision measuring instrument that displays an analog input signal as a digital readout. It is a single, complete unit (including power supply), requiring only signal and power connections for immediate use. It is designed to meet the needs of the manufacturer who plans to install the DPM as a component in the equipment he produces.

Beede's DPM is packaged in a rugged, dust-sealed, die-cast aluminum case with a completely enclosed wiring compartment. The case size is compatible with most known panel cutouts. The unit is equipped with screw terminals to permit connection by production personnel, the calibration adjustments are hidden from curious operators, and the meter is easily and securely installed or removed from the front of the panel to which it mounts.

The front panel appearance may be stylishly and conveniently customized to complement the appearance of your panel. The bezel color, and the company logo and scale identification printed on the decorative mask mounted behind the glass front will be tailored to provide your own proprietary appearance.

The standard models have been deliberately designed to fit into existing instrument circuits designed for pointer type panel meters, *without requiring modifications* to the existing circuit, simplifying the job of the design engineer changing over from pointer type panel meters to digital panel meters. Engineers will also appreciate the flexibility of being able to design a piece of equipment with one circuit, and the option of providing either a pointer type, or digital panel meter readout to their customers.

Beede supplies panel meters designed to customer specifications. Each unit shipped has been produced for a specific customer order, and the electrical range, readout and appearance have been engineered to meet the customer's requirements. A standard BCD (Binary Coded Decimal) Output option is available, and for special volume requirements, a wide choice of electrical and mechanical design options is also available.

SPECIFICATIONS:

Accuracy ±0.1% of reading ± one digit. This accuracy will be maintained over a temperature range of 20°F for 60 days without adjustment. Temperature coefficient: 0.004%/°F.

Temperature Range 14°F to 140°F operating. −20°F to 185° storage.

Input — Differential input isolated to ±300 VDC or AC (Peak). ±3.5 VDC or AC (Peak) when BCD utilized.

Optional Input Arrangements — Current Source for Resistance Measurement. Ratiometric Input.

Speed — 2 conversions/second (Standard). Other speeds available.

Resolution and Display — Three digits plus "1" over-range. Unit accurate to full 100% over-range. Automatic polarity indication. Three least significant digits extinguish for reading above 100% over-range. NIXIE[tm] display; ½ inch nominal character height. Three decimal point positions selected by grounding connector pins. Hold and/or blanking capability furnished as standard.

BCD Output Option — Three BCD 8-4-2-1 digits plus "1" over-range digit totaling 13 lines. Logic Levels: Standard TTL/DTL practice. End of Conversion, polarity signals and Trigger Input available.

Power Requirements — 105 to 125VAC, 57 to 63Hz, 3.5 watts nominal. Contact Beede for other input voltages and frequencies.

Termination — Standard unit without BCD Output option has nine, No. 6 screw terminals, and movable connector to select decimal point position. Units with BCD Output option have two, solder type, 30 pin edge connectors. Terminal Board cover supplied, providing a completely enclosed wiring compartment.

Mechanical Specifications — Die-cast aluminum, dust-sealed case. Die-cast aluminum front bezel with glass window and aluminum decorative mask. Amber polarizing filter. Captive front pulls out and swings to side for access to zero and span adjustments, and panel clamping arrangement. Front may be completely removed. Steel terminal board cover, screw fastened. Space available in case for customer specified accessory components.

Also available as options: Plastic window; Red or neutral polarizing filter; Sealed case for JIC type applications; Shorter depth behind panel dimension.

Mounting — Panel mounting is standard. Installable and removable from the front of the panel with leads connected. Rugged clamping arrangement designed for panels up to ⅜ inch thick. Mounting arrangement for heavier panels, conduit mount and yoke mount with stand available as options.

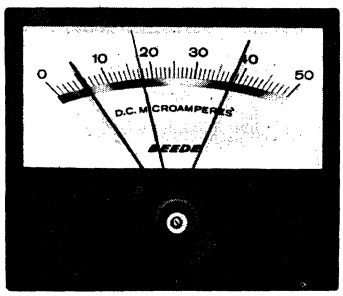
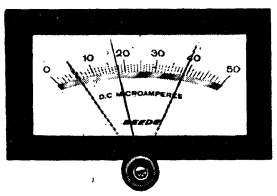
NON-CONTACTING CONTROL METER RELAYS (Standard Units now stocked)**





The Beede Control Meter Relay is an instrument that combines a permanent magnet-moving coil meter with an adjustable photoelectric sensor, switching circuit and output switch. As the indicated variable being monitored passes the adjustable set point, an output relay is either energized or de-energized. Units are available with either one or two adjustable set points. Beede has greatly simplified the design of the conventional non-contacting meter relay, significantly reducing the number of parts incorporated in the unit, resulting in price savings of up to 50% without a loss of quality features.

FEATURES

- **Optical, non-contacting control-continuous indication**
- **Wide variety of options available for easy, inexpensive customizing**
- **Inherently Fail Safe**
- **AC or DC power input**
- **Directive Drive Set Pointers**
- **Bulb Life in excess of 10 yrs.**
- **Meter movement and dial custom designed to your specifications if required**
- **Meter permanently free of static influence**
- **Attractive modern "Centurion" style case**
- **Large easy-to-read dial**

SPECIAL PYROMETER FEATURES

- **Models available from 0-300° F**
- **Electrical ambient temperature compensation**
- **Thermocouple break protection**
- **Internal potentiometer to compensate for external lead resistance**
- **Deadband externally adjustable**

SPECIFICATIONS

Accuracy ±2% or ±1%
ON-OFF operation or latching with manual reset
Output: 10 amp (resistive load) DPDT relay for each set point. Solid State Output available
Standard Deadband is 0.5%
Power Requirements 105 to 130 Volts AC. Other AC and DC power inputs available
Ambient Temperature 40° F to 165° F is standard

MOVEMENTS

MAG-BAND TAUT BAND
0-10 μA DC minimum range
MAG-B PIVOT AND JEWEL
0-50 μA DC minimum range
Size: 3″ and 4″
